# PART II.

## SECTION I.

### THE VITAL STATISTICS OF THE PROVINCE.

# SECTION I.

# VITAL STATISTICS.

## GENERAL POPULATION.

1. As this section relates exclusively to *deaths* from specified causes, perhaps the more appropriate heading would be *Mortuary Statistics*. In the last report it was proposed to close the old series of tables with those for 1872, and, from 1873, to begin a new series based upon *an enumerated population*, as determined by the Census taken on the 21st February 1872. This has now been done; but, before taking up our new figures, we must go through the old, and balance our bills of mortality. This, too, is the time to record briefly what improvements have been effected in that system, by which every death in each Collectorate is, or is supposed to be, registered, and assigned to one or other of the causes specified. Whatever may have been done prior to the appointment of the Sanitary Commission in 1864, it is not until 1865 that we get tabulated returns of the mortality throughout the Presidency. In that year they were first prepared by Dr. Leith, and from that time to the present they have been submitted annually.

2. From 1865 to the end of 1870 deaths in this Presidency were registered in the forms here subjoined, one showing them from specified causes, the other giving them as they affected specified castes or classes:—

*DEATHS reported in the Civil Population of the Talookas of the* *Collectorate.*

| No. | Reported Population. Area in Square Miles. | Cholera. | | Small-pox. | | Fevers. | | Bowel Complaints. | | Accident or Violence. | | Other Causes. | | All Causes. | | Remarks. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Names of Talookas. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | |
| | | | | | | | | | | | | | | | | |

*DEATH REPORT of the* *Collectorate, for the Month of* 18 .

| Race or Caste. | Cholera. | | Small-pox. | | Measles. | | Fevers. | | Bowel Complaints. | | Accident or Violence. | | Other Causes. | | All Causes. | | Remarks. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | Males. | Females. | |
| Hindoo | ... | .. | ... | ... | ... | ... | .. | ... | .. | ... | ... | ... | ... | ... | ... | ... | |
| „ Low Caste | ... | ... | ... | ... | ... | ... | ... | .. | ... | ... | ... | ... | ... | ... | ... | ... | |
| Jain | ... | ... | ... | ... | ... | ... | ... | .. | ... | ... | ... | ... | ... | ... | ... | ... | |
| Mussulman | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | |
| Parsee | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | |
| Jew | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | |

| All Races or Castes | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | .. | |

* Cattle diseases were prevalent in the following localities, viz.:—

3. Deaths from small-pox were included in the general return, but they were also distinguished as follows :—

*DEATH REGISTER of* SMALL-POX *Cases for the Month of* 18 .

| No. | Name of Talooka. | Number of Deaths from Small-pox. | | | |
|---|---|---|---|---|---|
| | | Vaccinated. | | Never vaccinated. | Unknown and uncertain. |
| | | When under one year old. | When above one year old. | | |
| | | | | | |

4. Deaths from other than natural causes were returned by the Police in the following form :—

| | *ABSTRACT of CASUALTIES by* VIOLENCE *during the Month of* 18 , *in the* *Collectorate.* | | | | | Total Cases. |
|---|---|---|---|---|---|---|
| 1 | Murder undetected | of | Man | ... | ... | |
| | ,, | ,, | Woman | ... | ... | |
| | ,, | ,, | Child | ... | ... | |
| | Murder detected | ,, | Man | ... | ... | |
| | ,, | ,, | Woman | ... | ... | |
| | ,, | ,, | Child | ... | ... | |
| 2 | Homicide undetected | ,, | Man | ... | ... | |
| | ,, | ,, | Woman | ... | ... | |
| | ,, | ,, | Child | ... | ... | |
| 3 | Suicide by drowning in well | ,, | Man | ... | ... | |
| | ,, | ,, | Woman | ... | ... | |
| | ,, in tank | ,, | Man | ... | ... | |
| | ,, | ,, | Woman | ... | ... | |
| | Suicide by other means | ,, | Man | ... | ... | |
| | ,, | ,, | Woman | ... | ... | |
| 4 | Killed by wild beast | | Persons | ... | ... | |
| 5 | Died of Snake-bite | | Persons | ... | ... | |
| 6 | Died of Hydrophobia | | Persons | ... | ... | |
| 7 | Death, Accidental— | | | | | |
| | By drowning in well | | Man | ... | ... | |
| | ,, ,, | | Woman | ... | ... | |
| | ,, ,, | | Child | ... | ... | |
| | ,, in tank | | Man | ... | ... | |
| | ,, ,, | | Woman | ... | ... | |
| | ,, ,, | | Child | ... | ... | |
| | ,, in sea or river | | Persons | ... | ... | |
| | Death, accidental, from other known cause | | Persons | ... | ... | |
| 8 | Found dead, cause uncertain | | Man | ... | ... | |
| | ,, ,, | | Woman | ... | ... | |
| | ,, ,, | | Child | ... | ... | |
| 9 | Attempted Suicide by drowning in well or tank | | Man | ... | ... | |
| | ,, ,, ,, | | Woman | ... | ... | |
| | ,, by other means | | Man | ... | ... | |
| | ,, ,, | | Woman | ... | ... | |
| 10 | Recovery from Snake-bite | | Persons | ... | ... | |

5. These forms gave the total population for defined areas, and showed the deaths, male and female, from the more common diseases; showed them, too, for every Talooka, and for eight separate classes or castes. In the districts the system was worked under the orders of the Collector, and the results for the year were shown in the tables published with the Annual Report by Dr. Leith.

6. In 1870, with a view to secure more uniformity in the several provinces of the Empire, the Government of India brought out a proposed form of initial daily record, and monthly register, together with a series of annual forms, nine in all, for exhibiting the results :—

*DAILY REGISTER of* DEATHS *for* VILLAGE, MOHULLA, *or other unit of Area.*

| 1 | 2 | | | | 3 | | | | | | | | | | | | | | | | | | | | | 4 | | | | | | | | | |

FORMS Nos. VI., VII., VIII., and IX. are the same as Form No. II., but they show deaths from the diseases specified.

7. The primary village records of mortality are in this Presidency kept by the Patel and the Koolkurnee, and are subject to examination at any time by the Collector and his assistants; and, as this system was found best suited to the means at the disposal of the local authorities, it was retained. The details for each Talooka are gathered by the Mamlutdar, and by him are forwarded to the Collector's Office, where they are compiled for the entire District. The series of forms for exhibiting the annual results was adopted, and the monthly form recommended by the Government of India was the basis of that issued, additional columns being inserted for Population, and Area, and for Births. The deaths by accident were also shown in detail. This monthly form is here given:—

*MONTHLY REGISTER of BIRTHS and DEATHS in the* _____ *Collectorate* _____ *for* 18____

(* *See details.*) * Born dead to be entered under "All other causes."

8. With the introduction of this form the areas of observation were extended, by taking in all Towns of 5,000 or more inhabitants; but the great improvement was the showing deaths by ages. Although this form was in advance of those which it superseded, a twelve-month's working experience of it showed where minor alterations might be made with advantage; and an amended form was introduced from the 1st January 1872. This amended form is the following, and it is now in use:—

*MONTHLY REGISTER of BIRTHS and DEATHS in the* _____ *Collectorate for* _____ 18.

| 1 | 2 | 3 | | | | | | | | | | | | | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | | | | | | | | | | | | | | | | | | | | | | | | 12 | | | | | | | | | | | | | | | | | | |

9. In addition to this amended Monthly Register, the following special return of Cholera was submitted from Collectorates, Cantonments, and Jails :—

*STATEMENT showing the Extent of* CHOLERA *in the* DISTRICT *during the Month of* 18 .

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | |
|---|---|---|---|---|---|---|---|
| Name of District. | Name of Talooka. | Names of Registration Circle, Town, Jail, Cantonment, &c. (in Jail Return Memo. of Jail.) | Population according to the Census of .* | Number of Cases of Cholera reported. | Number of Deaths from Cholera reported. | Date of First Case and Last Case during the Month in each Circle, Town, &c. | |
| | | | | | | First Case. | Last Case. |
| | | Sanctioned by G. R. No. 2910, dated 28th Nov. 1870. | | | | | |

10. For the European portion of the Army, W. O. Form 463 is received every month, and returns for Native Troops and Jails are received through the Medical Department. Special reports of special occurrences are also made, as the necessity for them arises.

11. The amended form of Monthly Register is, in many respects, better than that first issued. The people are again classed under the following heads :—

1. *Christians.*—These are the native converts ; and, as time rolls on, it will be interesting to note whether there is a change in their duration of life sufficient to warrant the belief that, with their change of creed, there has been a material improvement in their condition. Presumably there should be, for in renouncing the one obligation of pilgrimage they escape a perfect host of dangers.

2. *Hindoos of Caste.*—Those are here represented who are simple as to diet, and careful, after a fashion, as to personal cleanliness.

1. Dher.
2. Purwara.
3. Mhar.
4. Mhang.
5. Chambhar.
6. Moochee.
7. Boorud.
8. Halalcore.

3. *Hindoos, Low Caste.*—These, again, are the careless, the dirty, and very often the dissipated.

4. *Jains.*—These are pure vegetarians.

5. *Mussulmans.*—
6. *Parsees.*— } These differ as to race.

7. *All Others.*—This comprehensive column takes in the wild and wandering tribes, many of them Dravidian.

12. These class and caste details are shown for every registration circle in each District ; and, as the area is also given, the density of population can easily be found. In the old form the column for deaths by class and caste came so close upon that for the living, that the two were apt to be mixed up together ; and in many instances there were given the sub-divisions of the living instead of the proportions for the dead. To prevent the chances of error, the deaths from specified causes follow in the new form the numbers living, and the caste or class proportion of these deaths is then shown.

1. Cholera.
2. Small-pox.
3. Fevers.
4. Bowel Complaints.
5. Accident or Violence.
6. All other Causes.

* In Jail return, actual number resident in Jail, *i.e.*, Prisoners, &c., Jail Establishment residing on premises.

13. The column for deaths by accident or violence was a very weak point in the old form, and in the new one it requires very careful scrutiny. Formerly, the *totals* of these deaths were given by the Collector, whilst the *details* were supplied by the Police, independently and direct; and it often happened that there was a discrepancy between the Collector's totals, and the collective units as given by the Police. In the forms prescribed by the Government of India violent deaths are classed as "Injuries" under the minor heads of suicide, wounding, accident, and snake-bite, or killed by wild beasts, and other causes. By this classification there is the difficulty of assignment: for instance, one man is shot accidently, another shoots himself, and a third is crushed by machinery; in each case the *cause* of death is the wounding, and yet one must be registered as suicide, the others as accident. To meet this difficulty the Bombay statement of details was framed on the principle, that every death from other than natural causes is always referrable to one of two conditions: it must either be *accidental*, or *intentional*; and, if intentional, it must either affect self, that is, it must be suicidal, or it must affect others; and in this case, it is for the law to say whether or not it be homicidal. To avoid complexity, the term "otherwise" has been adopted; and it is used advisedly because, when the return is made up, it may happen that such cases are under investigation. It is seldom that the *proximate* cause of death cannot be ascertained, for direct or indirect testimony will generally be forthcoming to show, that it was by one or other of the modes named; similarly, perhaps, it may be determined whether it was suicidal or accidental; so the only difficulty that is likely to present itself is—was it homicidal?—and with this we are not concerned, registering it as "otherwise": we still have the fact, that it was from a specified cause. The more common adventitious modes by which life is arrested are those here given. Deaths by drowning are shown as suicidal, accidental, otherwise; and they are further distinguished as occurring in wells or tanks, or otherwise. Should the figures be high, there is possibly an unguarded condition of village tanks and wells. Deaths by poisoning are similarly shown, and where these are frequent there is probably too great a facility for purchasing noxious drugs. By hanging the suicidal and accidental deaths are only shown, for obviously when the death is a judicial penalty it finds a place in the judicial record. Deaths by wounding are classed as are those by poisoning; and fatal cases of snake-bite are separated from those by attacks of wild beasts; so the extent to which these occur can be given separately. The seventh class is sufficiently elastic to meet every case which cannot be assigned to one or other of the six which precede.

1. Drowning.
2. Poisoning.
3. Hanging.
4. Wounding.
5. Wild Beasts.
6. Snake-bite.
7. Other Causes.

14. All violent deaths are now reported direct to the Collector, as well by the Police as by his own subordinates; and as, in every instance, there *must* be a time when, both in the Police and the Fouzdar's return, an entry is made of the name, sex, age, and caste of the deceased, and of the reported cause, if these initial records be compared and verified, the chances of error are reduced to a minimum.

15. As regards the prescribed diseases under which deaths are registered, it must not be forgotten, that nowhere is the cause attested, as at home, by those qualified to speak to it. Whilst the intelligence of the subordinate registration agency is very far from low, the ignorance of the masses is almost hopeless, and improvement must necessarily grow with the growth and diffusion of education. Much, however, is in the hands of the Collectors and their Assistants; and if they show an interest, most assuredly will an interest be shown by all their subordinates.

16. In the column for "*Ages at the time of death*," it has been directed that the "Born dead" are to be entered under deaths from "All other Causes;" and

they are thus separated from the births, amongst which they are also included, by no less than nine intervening columns. As a counterpoise to this separation, an addition was made to the column of births proper, thus :—

| 13 | | | | | |
|---|---|---|---|---|---|
| Births. | | | | | |
| | | | Born dead. | | |
| Boys. | Girls. | Total. | Males. | Females. | Total. |
| | | | | | |

17. The intention was to bring together the births and the "Born dead," and so facilitate the picking up of the latter for compilation ; but the change was disallowed ; and, as matters now stand, the total of column 13 represents the births and the "Born dead" shown in another column as deaths. In the English Tables these "born dead" are excluded ; and, seeing that they never have an independent life, never enter the world alive, it is an anomaly to represent them as having died ; equally so to place them in a return which professes to show the increase of the numbers living.

18. During the course of 1872 all defects in the working of the system were carefully noted ; and, at the close of the year, they were brought to the notice of Government, when the following suggestions regarding them were approved, and sanctioned. More uniformity, and a more punctual submission of the registers was asked for. It was pointed out that, as the first object is to obtain a classified return of deaths occurring amongst the native civil population, obviously no entry should be made of deaths which would, or should, find a place in returns from Regiments or Jails, nor of deaths of Europeans or Eurasians, which should be shown on a supplementary sheet. With these exceptions there should be a registry of every death in each district. It was also pointed out that, a district having once been divided into registration circles, no change should be made in their number or arrangement, during any current year. The circles should each have their allotted line on the monthly register, and should be shown in the following order :—

1. Rural Circles, denoted by R. C.
2. Town ,, ,, ,, T. C.
3. Cantonment ,, ,, Ct.

19. It was further pointed out, that deaths in Civil Hospitals must be shown against that circle in which the hospital is situated. Deaths on Railways, or in Lunatic Asylums, in Lock Hospitals, or Dispensaries, in all sections of Cantonments, or amongst the Police or Regimental followers, domestic servants, &c., should be similarly shown ; in short, all deaths should be entered against that circle in which they occur. It was enjoined that there should be no discrepancy between the collective total of columns 5, 6, 7, 8, 9, and 10, and the "total" sub-column of column 11. The collective totals of each line in columns 11 and 12 should also agree. The total of column 5 should agree with the total of column 6 of the Monthly Cholera Return, and the total of column 9 should agree with the total of the "Details," as given on the reverse of the register.

The word "Christians" was to be understood as meaning Native converts to Christianity.

20. The returns for any given month were to be submitted by the end of the month next following, or as soon after as possible, and no efforts were to be spared to ensure this being done; for it was pointed out that until all contributory registers had been received, the compilation of the general tables for the Presidency could not be *commenced*. The subjoined forms of Cholera Return were also issued :—

*RETURN showing the extent of* CHOLERA *in the* COLLECTORATE *during* 18

| 1 | 2* | 3† | | 4 | | 5 | | 6 | | 7 |
|---|---|---|---|---|---|---|---|---|---|---|
| Name of Registration Circle.<br>Rural.....R.C.<br>Town.....T.C.<br>Cantonment,Ct. | Name of Town, or Village, or Cantonment, forming part of a Registration Circle. | Population by Census of 21st February 1872.<br>Of No. 2 Column. | | No. of *Cases* reported. | | No. of *Deaths* reported. | | Date of first Case and last Case during the month for each line of No. 2 Column. | | REMARKS. |
| | | Males. | Females. | Males. | Females. | Males. | Females. | First Case. | Last Case. | |
| *N.B.*—No cases are to be entered in the Cantonment Return, which would, or should find a place in a return from a Regiment or Jail. Deaths among Europeans and Eurasians to be shown separately | | | | | | | | | | |

* In this column the several units of a Circle in which Cholera has appeared should be marked by brackets—thus } ———, and the name of the Circle should be given in No. 1 column. Towns and Cantonments which are independent Circles should be entered in No. 1 column only. Deaths amongst Europeans and Eurasians to be shown separately.

† For Jails the return should show the actual number within Jail area, including both prisoners and establishment.

21. Here there is a brief summary of the *Registration System* which now obtains; and, in theory, it is an admirable one. The village is the primary unit, groups of villages constitute a circle, and collective circles form a district. The Patel's is the initial record, and for every death there is, or is supposed to be, an entry of name, sex, age, caste or class, and date of demise; and it is assigned to one or other of certain specified causes. When the initial records have been framed into village returns they are collected by the Mamlutdar, and, by him, are recast into a return for his circle. The circle returns are then forwarded to the Collector's Office, where they are worked up into one general return for the Collectorate; and, in this shape, the returns from all the Collectorates reach this office, and are compiled for the entire Presidency.

22. In practise, the system has its weak points; and the weakest is, it is nobody's bantling. Introduced, but not adopted, it seems to be regarded as more irksome than interesting; and it languishes more from inanition than from inattention on the part of the people.

## General Population.

23. The Bombay Presidency extends from 13° 55′ Lat. N. in Kanara, to 28° 32′, the most northern point of our Sind Frontier. In breadth it extends from 66° 43′ Long. E. in Sind, to 76° 20′, the eastern border of Khandesh. The area of its Registration Districts,—those with which we are now dealing,—is 124,457·75 square miles; just 5,233 square miles larger than the combined areas of England, Scotland, and Ireland. Whilst the average length is about 1,000 miles, the average breadth is only some 350. In addition to this area, that is, that of the Native States,—estimated at 63,253 square miles,—so the total area of the Presidency is 187,710·75 square miles.

24. There are 24 Registration Districts, and they again are divided into Circles, thus:—

| Divisions. | Registration Districts. | Registration Circles. | | |
|---|---|---|---|---|
| | | Rural T. C. | Town T. C. | Cantonment Ct. |
| Deccan | 9 | 102 | 87 | 8 |
| Konkan | 5 | 36 | 23 | ... |
| Guzerat | 5 | 34 | 34 | 1 |
| Sind | 5 | 53 | 9 | ... |
| Total..... | 24 | 225 | 153 | 9 |

225+153+9=387.

The towns are those having 5,000 or more inhabitants. The Cantonments are those within Collectorates, qualified by numbers to be independent circles.

25. In 1871 the total of registration circles was 258, in 1872 there were 339, and in 1873 they had risen to 387.

26. From 1866 to 1872 we deal with an *estimated* population, and in the subjoined table they are shown year by year, together with the average of the seven years, and the difference between that average and the *enumerated* numbers as determined by the Census of the 21st February 1872.

27. Throughout the Deccan the enumerated numbers exceeded the average estimated by 1,210,177·6. In the Konkan they were higher by 508,470·7, in Guzerat by 514,308·7, and in Sind by 396,691·4. For the whole of the districts collectively the population has been *under* estimated by 2,629,648·4. For Ahmadnagar in the Deccan, for Bombay City in the Konkan, and for Thar and Parkar in Sind, the average estimated numbers exceeded the enumerated :—

*TABLE showing, for the undermentioned Collectorates, the estimated population from* 1866 *to* 1872, *both years inclusive, together with the average of the* 7 *years, and the difference between that average and the enumerated Census numbers.*

| Division. | No. | Registration Districts or Collectorates. | Estimated Population. 1866. | 1867. | 1868. | 1869. | 1870. | 1871. | 1872. | Average of the 7 Years. | Enumerated Population. | Difference between the 7 Years' average and enumerated numbers. |

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.

† Prior to 1869 Kolaba was a portion of the Thana Collectorate.

‡ Statistics for the City of Bombay were first included in the Annual Report of the Sanitary Commissioner in 1867.

§ Prior to 1868 Broach was a portion of the Surat Collectorate.

‖ This includes the Population of Jambughora, a Native State.

28. The Census numbers supply the datum to which all our tables must now be referred; but until such time as the natural fluctuations can be shown, that is to say until there can be given the excess of births over deaths, or the preponderance of deaths over births, (if unhappily this should be so,) we can have nothing but mere records. Valuable and elaborate, but still mere records that in such and such a year so many died from such and such causes. Although returns of deaths were first compiled in 1865, they were then very far from complete; nor is it until 1869 that we get them in one unbroken series, and then only in gross totals, and without distinction of sex.

29. Hitherto there has been carried on, from year to year, a table which gives the *estimated* population, the casualties from all causes, and the death rate for the year. It is an abstract for the period to which it relates, and it will repay examination, more particularly as we begin a new series from 1873:—

1865. In this the first year of registration, the *estimated* population was given as 11,454,958, and the deaths were 265,019. Now, it cannot be shown that any other influence tended to augment the diminution, nor can any known addition be made on account of births; so there is merely the record that, from certain specified causes, the population was reduced by 265,019 = 23·1 per mille.

1866. For this year the population is returned as 12,428,336. There is an increase of 973,378 = 78·3 per 1,000, and the deaths are 185,958 =14·9 per 1,000.

1867. The total now is 13,243,928. Again an increase, and this time of 815,592 = 61·6 per 1,000. The deaths are 162,996 = 12·3 per 1,000.

1868. Here the total is only 12,792,743. There is a decrease of 451,185 = 35·4 per 1,000. The deaths were 185,230 = 14·5 per 1,000.

1869. For this year we get 13,901,863. The increase is 1,109,120 = 79·8 per 1,000. The deaths are 284,838 = 20·5 per 1,000.

1870. The total is 13,523,873. There is a decrease of 377,990 = 27·9 per 1,000. The deaths are 219,758 = 16·3 per 1,000.

1871. The total for the year is 14,153,924. The increase is 630,051 = 44·5 per 1,000. The deaths were 279,726 = 19·7 per 1000. We also get our first return of births, shown too by sexes, thus:—

133,526 males.
119,083 females.

252,609

The proportion of male births to female is as 1 to 0·9.

1872. In this year the population is returned as 15,197,071; and for the second time in one twelvemonth we have an increase of more than one million; it is 1,043,147 = 68·7 per 1,000. There were 355,960 deaths = 23·4 per 1,000—the highest rate yet met with. There were 266,943 births registered, the proportion of male to female being as 100 to 89·8, thus:—

140,644 males.
126,299 females.

266,943

30. The results here detailed are subjoined in a tabulated form, for easier reference :—

| Years. | Population. | | | Deaths. | | Births. | |
|---|---|---|---|---|---|---|---|
| | Estimated. | Increase or Decrease. | Rate per 1,000. | Total. | Rate per 1,000. | Total. | Rate per 1,000 on Total Population. |
| 1865 ... | 11,454,958 | ..... | ..... | 265,019 | 23·1 | ..... | ..... |

| 1871 ... | 14,153,924 | + 630,051 | + 44·5 | 279,726 | 19·7 | 252,609 | 17·7 |
| 1872 ... | 15,197,071 | + 1,043,147 | + 68·7 | 355,960 | 23·4 | 266,943 | 17·6 |
| Means ... | 13,337,087 | ... | ... | 242,435·6 | 18·2 | ... | ... |

31. Now, this table is neither satisfactory nor consistent. Take the increase of population. We know that in England it is about one million every *five* years ; but although it may be assumed that for India the rate would be somewhat higher, we are scarcely prepared to add 1,109,120 *in one year*. And to what are we to assign this increase ? Although there is a constant influx and efflux from district to district, this local movement would hardly affect the general returns ; and, in this Presidency, neither emigration nor immigration, in their true sense, can be said to be very active. They perhaps balance each other. So, after all, we must look to natural increase, by Births. And what ought to be this increase, and what should be the decrease ? For England observations extending over 33 years—from 1838 to 1870—give a mean death rate of 22·4 per 1,000, and a birth rate—born alive—of 33·8 per 1,000. So here are points for guidance ; but seeing that for the Presidency generally we have never before had an *enumerated* population ; that the death rates of the registers are such as to make them doubtful ; and that, until 1871, there is no registers of births : the rate of increase for previous years can only be computed, and if we do this, working back by the rates for 1873, it will be interesting to see how far the *recorded* numbers differ from those *calculated* :—

| Years. | Population. | | | |
|---|---|---|---|---|
| | Estimated and shown by Registers. | Computed Rate of Increase 35 per 1,000. | Computed Yearly Increase. | Yearly fluctuations as given by Registers. |
| 1865 ... ... | 11,454,958 | ..... | ..... | ..... |
| 1866 ... ... | 12,428,336 | 12,863,327·8 | 434,991·8 | + 973,378 |
| 1867 ... ... | 13,243,928 | 13,313,544·3 | 450,216·5 | + 815,592 |
| 1868 ... ... | 12,792,743 | 13,779,518·1 | 465,974·1 | — 451,185 |
| 1869 ... ... | 13,901,863 | 14,261,801·2 | 482,283·0 | + 1,109,120 |
| 1870 ... ... | 13,523,873 | 14,760,964·2 | 499,163·0 | — 377,990 |
| 1871 ... ... | 14,153,924 | 15,277,597·9 | 516,633·7 | + 630,051 |
| 1872 ... ... | 15,197,071 | 15,812,313·8 | 534,715·9 | + 1,043,147 |

32. From the above table there is an increase for five years, and a decrease for two years ; and for the seven years the mean rate of increase is 35 per 1,000. Applying this rate, the results year by year would have been those above shown ; and it will be seen how equable is the progression.

33. Taking the rate for 1873, the average proportion between the sexes, for the years above named, was 1,000 males to 913·26 females ; and, in the following table, there is given the *estimated* population, and the proportion of the sexes at this adopted rate:—

| Years. | Population. | | |
|---|---|---|---|
| | Estimated. | In proportion of 1,000 to 913·26. | |
| | | Males. | Females. |
| 1865 ... | 11,454,958 | 5,987,141·3 | 5,467,816·7 |
| 1866 ... | 12,428,336 | 6,495,894·9 | 5,932,441·1 |
| 1867 ... | 13,243,928 | 6,922,178·9 | 6,321,749·1 |
| 1868 ... | 12,792,743 | 6,686,358·9 | 6,106,384·1 |
| 1869 ... | 13,901,863 | 7,266,060·5 | 6,635,802·5 |
| 1870 ... | 13,523,873 | 7,068,497·2 | 6,455,375·8 |
| 1871 ... | 14,153,924 | 7,397,804·8 | 6,756,119·2 |
| 1872 ... | 15,197,071 | 7,943,024·5 | 7,254,046·5 |
| Average... | 13,337,087 | 6,970,870·1 | 6,366,216·9 |

## Enumerated Population.

34. By the Census of the 21st February 1872, the population of the 24 Registration Districts of the Presidency was returned as 16,228,774 ; but in the statistical portion of the Annual Report, it is shown as 16,235,611. The difference represents the numbers for the Native State of Jambughora in the Panch Mahals. Of this State the population is made up of 3,466 males and 3,371 females, a total of 6,837; and as the casualties amongst them are included in the general monthly return for the Panch Mahals, the numbers living must also be shown. In the Census returns these 6,837 are relegated to their own proper Native State, and hence the apparent discrepancy. Whenever the total population of the Registration Districts is here spoken of, it is to be understood as being 16,235,611, the proportion of males to females being 100 to 91, thus :—

8,485,854 males.
7,749,757 females.

16,235, 611

The males outnumber the females everywhere except in the Ratnagiri Collectorate, and here the total of 1,019,136 is thus made up :—

528,020 females.
491,116 males.

36,904 Excess of females.

35. The following Table gives the *enumerated* population for each Registration District :—

*STATEMENT showing, for the undermentioned Registration Districts of the Bombay Presidency, the Area and Population by Sexes.*

* There is here included the Population and area of Jambughora—a Native State.

36. In this table Europeans and Eurasians are included, for they are included by Collectors in their registers, although the deaths are of Natives only. The total of these Europeans and Eurasians is only 11,572, and 9,475 of these are in the City of Bombay. Whether added or omitted they would not alter the ratios by one integer. The proportion of males to females is 2 to 1, thus :—

7,713 males
3,859 females

11,572

Being an important section of the community, they are shown in detail.

*STATEMENT showing, for the undermentioned Districts of the Bombay Presidency, the European and Eurasian population by Sexes.*

## BIRTHS.

37. The registration of births in this Presidency only dates from 1871, and for that year the rate was 17·7 per 1,000; in 1872 it was 17·6; and in 1873 it was 17·9: the average for the three years being 17·7. In England, for the ten years ending with 1860 it was 34·2; in the next ten it was 35·2; and in 1871 it was 35·0. There is no reason to suppose that in India there is a lower rate than in England; it is, at least as high, and, in all probability, higher; so the conclusion is that very many births escape registry. This must be so; but the constant error is itself a proof that the leaven is working; and, although the results are not all that could be wished, they are far from unsatisfactory. In 1873 the number of births registered was 290,319—more by 23,376 than in 1872, and by 37,710 than in 1871.

38. In round numbers, and for the Presidency, the proportion of male to female births was 100 to 89 in 1871, and 100 to 90 in 1872 and 1873. The proportion in the several divisions was that here given.

*Statement showing, for each Division of the Bombay Presidency, the proportion of Female to* 100 *Male births.*

| Division. | 1871. | 1872. | 1873. | Average. |
|---|---|---|---|---|
| Deccan ... ... ... | 90 | 92 | 92 | 91 |
| Konkan ... ... ... | 93 | 92 | 93 | 93 |
| Guzerat ... ... ... | 87 | 87 | 86 | 87 |
| Sind ... ... ... | 72 | 70 | 69 | 70 |

39. In the Dharwar Collectorate the rate is 30·5, the highest in the Presidency; and in Kanara it is 29·6. It is evident that, in the city of Bombay, those clauses of the Municipal Act which relate to the registration of births, are systematically evaded. Here, if anywhere, the rate should be nearer what it ought to be; and what is it? In 1871, on the estimated population of 816,562 the registered numbers were 2,989 boys and 2,747 girls, a paltry total of 5,736=7·2 per mille. In 1872 the rate was 21·1, and in 1873 it was 20·3 per mille, the average for the three years being 16·2.

For Sind generally the results are very unsatisfactory.

40. It has always been supposed, that in this country more boys than girls are born; and the following table will show that this has been so during the last three years in every registration district, without one single exception:—

*Statement showing, for the undermentioned Districts, the number of* BIRTHS *registered, and their proportion to the total Population.*

| Division. | No. | Registration Districts. | 1871. Estimated Population. | 1871. Births. Males. | 1871. Births. Females. | 1871. Births. Total. | 1871. Ratio per mille to total Population. | 1872. For Registration Districts only.

41. From this table it is seen that the number is least for the first quarter; it then rises till the end of the third quarter, when it begins to fall. For the last three years the average number for the first quarter was 58,270·3, for the second 67,286·3, for the third 73,275, and 71,125·3 for the fourth. In 1873 the number was 59,789 for the first quarter, 69,170 for the second, 80,635 for the third, and 80,725 for the fourth.

42. By months the average of the last three years gives the greatest number in July, 25,403·7, and the least in February, 18,393·6. In 1873 the maximum was in October, 27,916, and the minimum in February, 18,884. The details are shown below :—

*Statement showing, for the Bombay Presidency, the Number of Births registered in each Month of the Year from* 1871 *to* 1873, *both years inclusive.*

| Years. | January. | February. | March. | April. | May. | June. | July. | August. | September. | October. | November. | December. | Total. |

For Registration Districts only.

43. In 1871 the deaths for the Presidency exceeded the births by 27,117. In the Deccan the births were in excess by 16,266; except in the Poona Collectorate, where the recorded deaths were more by 2,456. In the Konkan generally the deaths were more by 13,494. In the Surat Collectorate there was an excess of 883 births over deaths; but in the other Guzerat Collectorates the deaths predominated. In Sind it was the same. In 1872 the deaths exceeded the births by 89,017. In the Deccan alone they exceeded them by 52,376 ; but in the Dharwar Collectorate there were more births. For the Konkan, the births in Kanara and Ratnagiri exceeded the deaths; in the other Collectorates the contrary was the case. In Guzerat and Sind the deaths were everywhere in excess.

44. In 1873 the deaths exceeded the births by 653 only. In the Deccan there were more births by 3,286. In the Kanara and Ratnagiri Collectorates of the Konkan they were in excess; but everywere else in the Presidency the deaths predominated, as will be seen in the following Table :—

## *STATEMENT showing for the undermentioned Districts the Total of* BIRTHS, *inclusive of Still-born, and the Total of* DEATHS, *together with the difference between them.*

## DEATHS.

45. The mortality from specified causes is shown for each of the 24 Registration Districts separately, and for each of the 4 Divisions into which those Districts are grouped. In showing it by months the year has been divided into the well-known seasonal periods, and, as its last month is by climate associated with the first three, it has been transposed, and, with January, February, and March, makes up the season of comparative cold: April and May are unmistakably the hot season, whilst June, July, August, and September are months of rain: October and November are months of heat, but with it there is more or less a damp subsoil, and deciduous growth is everywhere dying and drying under a burning sun. These are the natural and familiar periods, and they may be shown thus:—

| Seasons. | | | |
|---|---|---|---|
| Cold. | Hot and Dry. | Rainy. | Hot and Damp. |
| December.<br>January.<br>February.<br>March. | April.<br>May. | June.<br>July.<br>August.<br>September. | October.<br>November. |

The tables for 1872 being the last of a seven years' series, the average death rate for the period will be taken as the standard with which to compare the rates of succeeding years; and there will also be shown the mortality of the year immediately preceding, as the memory of it will be fresh, and it may serve for more vivid comparison.

46. In 1873 there were registered 290,972 deaths from all causes, the annual average of seven years being 239,209·43. Of these deaths 157,040 were of males, and 133,932 of females, a proportion of 100 to 85·3. Of males dying to males living the ratio per 1,000 was 18·51, and of females dying to females living it was 17·28. There are now shown, from 1865 to 1873, both years inclusive, the total number of deaths registered, and the death rate per 1,000 living:—

| Years. | Deaths registered. | Out of every 1,000 living there died. |
|---|---|---|
| 1865 ... ... ... | 265,019 | 23·1 |
| 1866 ... ... ... | 185,958 | 14·9 |
| 1867 ... ... ... | 162,996 | 12·3 |
| 1868 ... ... ... | 185,230 | 14·5 |
| 1869 ... ... ... | 284,838 | 20·5 |
| 1870 ... ... ... | 219,758 | 16·3 |
| 1871 ... ... ... | 279,726 | 19·7 |
| 1872 ... ... ... | 355,960 | 23·4 |
| 1873 ... ... ... | 290,972 | 17·9 |

47. The mean death rate for the 8 years from 1865 to 1872 is 18·2 per 1,000, and this is the *standard rate* by which that of each succeeding year will be measured; thus, the rate for 1873 is below the standard by 0·3. The average annual mortality can only be taken from 1866, for it is in this year we first get the tables sufficiently complete to commence a series. For the 7 years ending with 1872 the yearly average is 239,309·43, and this is now our *standard annual mortality*, so the mortality in 1873 is above the standard by 51,762·57. In the following table these details are given for each District and each Division:—

*STATEMENT showing, for the Bombay Presidency Registration Districts, the total Mortality in each District and Division from* 1866 *to* 1872, *both years inclusive.*

| Division. | No. | District. | 1866 | 1867 | 1868 | 1869 | 1870 | 1871 | 1872 | Total. | Average annual Mortality. |

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.
† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.
‡ From Health Officer's Reports from 1866 to 1870 inclusive.
§ Prior to 1868 Broach was a portion of the Surat Collectorate.
‖ For 1872 the Shikarpur Returns were too imperfect to be published.

48. From the above table it will be seen that, in the second year of record, the deaths registered are less by 22,962; in the third and fourth they are more by 22,234 and 99,608 respectively; in the fifth year they are less by 65,080; and in the sixth and seventh again are they more by 59,968 and 76,234 respectively. The account would read thus: minus—plus—plus—minus—plus—plus; and I think that, apart from the normal increase, the figures denote not so much that there are more deaths, but that more are now registered—the yearly differences are seen at a glance when tabulated thus :—

1866 = 185,958
1867 = 162,996 — 22,962
1868 = 185,230 + 22,234
1869 = 284,838 + 99,608
1870 = 219,758 — 65,080
1871 = 279,726 + 59,968
1872 = 355,960 + 76,234

When the fluctuation is spasmodic the probability is that cholera or small-pox has been unusually prevalent; for instance, in 1869, there is a sudden increase of 99,608, but in this year there were 31,961 deaths from cholera alone. In 1872 also there is an increase of 76,234, but 42,341 are deaths from cholera and small-pox. In each year the maximum mortality has been in Satara, and the next on the list is Dharwar; the minimum is in the Upper Sind Frontier Districts, but here registration is hardly so well established. Taking the death rate upon the living population of the district, the highest ratio is for Surat and the lowest for Thar and Parkar. By divisions Guzerat has the highest ratio, and Sind the lowest. These results are here given :—

| Divisions. | Enumerated Population. | Total number of Deaths. | Ratio of Deaths per 1,000 of Population. | Mean ratio of Deaths per 1,000 during previous 5 years. |
|---|---|---|---|---|
| Deccan ... ... ... ... | 7,966,061 | 133,838 | 16·80 | 19·79 |
| Konkan ... ... ... ... | 3,259,776 | 63,197 | 19·39 | 18·46 |
| Gujerat ... ... ... ... | 2,817,359 | 72,624 | 25·78 | 23·08 |
| Sind ... ... ... ... | 2,192,415 | 21,313 | 9·72 | 12·08 |
| Total... ... | 16,235,611 | 290,972 | 17·92 | 19·05 |

49. Of the 290,972 deaths registered, 6,075 are those of children "born dead," and I may here state that, for the last three years, out of every 1,000 births, the "still-born" have averaged 21·14, thus :—

| Years. | Total number of Births. | Number of "Still-born." | Out of every 1,000 Births there were Still-born |
|---|---|---|---|
| 1871 ... ... ... ... ... ... ... | 252,609 | *5,660 | 22·41 |
| 1872 ... ... .. ... ... ... ... | 266,943 | 5,389 | 20·19 |
| 1873 ... ... ... ... ... ... ... | 290,319 | 6,075 | 20·93 |
| Means..... | 269,957 | 5,708 | 21·14 |

* In the Annual Report for 1871, the number of "Still-born" for the City of Bombay was not shown; so the number for that year (658) is taken from the Health Officer's report for 1871.

50. We now come to deaths at different ages, and they are here shown for those groups under which they are registered :—

| Numbers Living. | | Deaths, exclusive of still-born. | Ratio per 1,000 to living. |
|---|---|---|---|
| Not exceeding 1 year | 582,988 | 45,473 | 77·60 |
| From 1 to 6 years | 2,881,880 | 57,055 | 19·80 |
| „ 6 to 12 „ | 2,437,253 | 14,567 | 5·97 |
| „ 12 to 20 „ | 2,361,229 | 14,690 | 6·22 |
| „ 20 to 30 „ | 3,154,580 | 28,470 | 9·02 |
| „ 30 to 40 „ | 2,207,376 | 28,033 | 12·65 |
| „ 40 to 50 „ | 1,365,321 | 27,868 | 20·41 |
| „ 50 to 60 „ | 792,025 | 31,211 | 39·41 |
| Exceeding 60 „ | 452,959 | 37,530 | 82·86 |
| | 16,235,611 | 284,897 | 17·54 mean |

From this table it will be seen that, age for age, out of every 1,000 children born, 77·60 die before completing their first year. On the total of deaths one out of every 6 is that of a child under one year. In England the rate is 1 in 4; so there is one of two conclusions: either the infant mortality is higher in England, or some of ours escape us. The latter is the more probable. Excluding "*still-born*," the mortality under 6 years is rather more than one-third of the whole: from 6 to 20 it decreases: from 20 to 30 it is nearly doubled: from 30 to 50 there is no very marked difference; but after 50 it again increases. After 60 our record of age is lost, but the death rate is 82·86 per 1,000. Between 12 and 20 the mortality is higher amongst females than amongst males of the same age; but at all other periods it is less. For these years it is about as much higher as at other times it is lower, and the causes are obvious.

51. The next table gives the total of deaths exclusive of "*still-born*," and it gives the total for each separate age period; thus out of the 284,897 deaths, there were 45,473 under 1 year. If the total be taken as 1,000, then the proportion under 1 year is 160, and so on: it bears also a fractional part equal to $\frac{1}{6}$ of the total :—

| Ages. | Total of Deaths, exclusive of still-born. | Total Deaths at the ages specified. | Out of every 1,000 there died | Fractional part of Total Mortality. |
|---|---|---|---|---|
| Under 1 year | 284,897 | 45,473 | 160 | $\frac{1}{6}$ |
| 1 to 6 years | | 57,055 | 200 | $\frac{1}{5}$ |
| 6 to 12 „ | | 14,567 | 51 | $\frac{1}{20}$ |
| 12 to 20 „ | | 14,690 | 52 | $\frac{1}{20}$ |
| 20 to 30 „ | | 28,470 | 99 | $\frac{1}{10}$ |
| 30 to 40 „ | | 28,033 | 98 | $\frac{1}{10}$ |
| 40 to 50 „ | | 27,868 | 99 | $\frac{1}{10}$ |
| 50 to 60 „ | | 31,211 | 109 | $\frac{1}{9}$ |
| Above 60 „ | | 37,530 | 132 | $\frac{1}{8}$ |
| Total..... | ..... | 284,897 | 1,000 | 1·0 |

52. In the next table there are given the deaths, month by month, and the ratio per 1,000 on the total population. The maximum and minimum are respectively 28,891 in January, and 20,392 in June :—

| | January. | February. | March. | April. | May. | June. | July. | August. | September. | October. | November. | December. | Total. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Total of Deaths ... | 28,891 | 21,590 | 24,031 | 21·866 | 22·372 | 20,392 | 22,503 | 24,772 | 24,925 | 26,629 | 26,852 | 26,149 | 290,972 |
| Ratio per 1,000 on total Population ... | 1·78 | 1·33 | 1·48 | 1·35 | 1·38 | 1·26 | 1·39 | 1·53 | 1·53 | 1·64 | 1·65 | 1·61 | 17·92 |

53. By the usual quarters the deaths and the ratio per 1,000 on the total population are thus tabulated :—

| Quarters. | Total number of Deaths. | Ratio per 1,000 on total Population. |
|---|---|---|
| 1st Quarter ending March ... ... ... | 74,512 | 4·59 |
| 2nd Do. do. June ... ... ... | 64,630 | 3·98 |
| 3rd Do. do. September ... ... | 72,200 | 4·45 |
| 4th Do. do. December ... ... | 79,630 | 4·90 |
| Total..... | 290,972 | 17·92 |

54. Taking them by our seasons they are distributed thus :—

| Months. | Seasons. | No. of Deaths. |
|---|---|---|
| Dec., Jan., Feb., March. ... | Cold... ... ... | 100,661 |
| April, May ... ... ... | Hot and Dry ... | 44,238 |
| June, July, Aug., Sept. ... | Rainy ... ... | 92,592 |
| Oct., Nov. ... ... ... | Hot and Damp ... | 53,481 |

55. Showing them by specified causes, and still retaining our seasons, they appear as shown below :—

| Diseases. | Cold. | | | | | Hot and Dry. | | | Rainy. | | | | | Hot and Damp. | | | Total of the year. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | December. | January. | February. | March. | Total. | April. | May. | Total. | June. | July. | August. | September. | Total. | October. | November. | Total. | |

| | | Total... 290,972 |

56. The details of deaths by specified causes are given in Section II. of this Report, so the totals only are given here, and contrasted with those for 1872 :—

| | 1873. | 1872. |
|---|---|---|
| Deaths from Cholera ... ... ... ... ... ... | 283 | 15,642 |
| „ Small-pox ... ... ... ... ... ... | 9,935 | 26,699 |
| „ Fever ... ... ... ... ... ... | 188,201 | 206,747 |
| „ Bowel Complaints... ... ... ... ... | 26,259 | 33,664 |
| „ Accident and Violence ... ... ... ... | 5,951 | 5,804 |
| „ All other causes ... ... ... ... ... | 60,343 | 67,404 |
| | 290,972 | 355,960* |
| | | 290,972 |
| | | —64,988 |

*This excludes 11,097 deaths in Shikarpur. The details for this Collectorate were too imperfect to be given.

57. In the following Table these specified deaths are shown as they occurred by months, and their ratios are contrasted with those of the previous year :—

## *STATEMENT showing the Deaths registered from Different Causes in the Registration Districts of the* BOMBAY PRESIDENCY *during each Month of the Year* 1873.

| Population. | | Heads under which Deaths have been registered. | | January. | February. | March. | April. | May. | June. | July. | August. | September. | October. | November. | December. | Total Deaths from each cause. | Ratio of Deaths from each cause per 1,000 of population. | |

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.

† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.

‡ From Health Officer's Reports from 1866 to 1870, inclusive.

§ Prior to 1868 Broach was a portion of the Surat Collectorate.

‖ For 1872 the Shikarpur Returns were too imperfect to be published.

59. In the Standard Forms the population is grouped under 4 separate classes, thus: *Hindoos, Mussalmans, Christians, and Others;* and the ratios of mortality are here shown for each class:—

| Divisions by Class or Caste. | Numbers by Census of February 21st, 1872. | Deaths. | Ratio of Deaths per 1,000 of population. |
|---|---|---|---|
| Christians ... ... ... ... ... ... ... | 106,072 | 1,959 | 18·42 |
| Mussulmans ... ... ... ... ... ... ... | 2,842,795 | 37,493 | 13·19 |
| Hindoos ... ... ... ... ... ... ... | 13,117,268 | 247,909 | 18·90 |
| Other Classes ... ... ... ... ... ... ... | 169,476 | 3,611 | 21·31 |
| Total ... | 16,235,611 | 290,972 | 17·92 |

60. The subjoned tables give the mortality for each of the eight registration years, and the Summary shows us in what direction we should work:—

| Sections into which the entire Population has been divided. | 1866. Cholera. | Small-pox. | Fever. | Bowel Complaints. | Injuries. | All other Causes. | Total. | 1867. Cholera. | Small-pox. | Fever. | Bowel Complaints. | Injuries. | All other Causes. | Total. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| General Population ... ... | 23,037 | 3,846 | 94,456 | 20,289 | 4,675 | 39,655 | 185,958 | 5,143 | 8,802 | 89,841 | 17,373 | 4,088 | 37,749 | 162,996 |

# CANTONMENTS.

1. The Cantonments marginally noted furnish monthly registers of births and deaths, which have a certain value, as coming from isolated spots in territories to which no system of registration has yet been extended. Their detailed *estimated* population is here given, together with its average for five consecutive years, and the actual numbers as determined by the Census of 1872. In a total of 71,024 persons there were 40,112 males and 30,912 females—a proportion of 100 to 75.

| Nasirabad | 18,073 | 17,643 | 17,125 | 17,591 | 18,336 | 17,753·6 | 18,336 | + 583 |
| | 912 | 972 | 885 | 854 | 1,173 | 959·2 | 1,173* | + 214 |
| Total | 66,934 | 67,382 | 66,692 | 67,253 | 70,237 | 67,699·6 | 71,024 | |

* From last year's return. † Prior to the Census it was an *estimated* population.

2. It will be seen that, in this table, the numbers at Kholapur rise from 421 in 1868 to 1,148 in 1869. At Mahidpur, too, they rise from 236 to 495, whilst in 1872 they fell from 522 to 142. With the exception of these obvious mistakes, there are no very great differences between the numbers *estimated* and *enumerated*.

3. The registration of Births only dates from 1871, when 1,940 were reported in a population of 67,253 : a proportion of 28·8 per 1,000. In 1872 there were 2,011, the population being 70,237—a proportion of 28·6 per 1,000. In 1873 there were 2,106, the population being 71,024—a proportion of 29·7 per 1,000. for this year the details are se her givn :—

*STATEMENT of BIRTHS registered in the undermentioned Cantonments during* 1873.

| Cantonments.* | Births. | | | Total Enumerated Population. | Ratio per mille to total population. |
|---|---|---|---|---|---|
| | Males. | Females. | Total. | | |
| Aden | 42 | 30 | 72 | 2,069 | 34·8 |
| Baroda | 6 | 18 | 24 | 2,451 | 9·8 |
| Bhuj | 26 | 19 | 45 | 991 | 45·4 |
| Deesa | 71 | 34 | 105 | 9,335 | 11·2 |
| Kholapur | 22 | 15 | 37 | 1,880 | 19·7 |
| Mahidpur* | ... | ... | ... | 210 | ... |
| Mhow | 352 | 336 | 688 | 22,792 | 30·2 |
| Nimach | 136 | 91 | 227 | 11,787 | 19·3 |
| Nasirabad | 406 | 399 | 803 | 18,336 | 43·8 |
| Rajkote | 47 | 58 | 105 | 1,173 | 89·5 |
| Total... | 1,108 | 998 | 2,106 | 71,024 | 29·7 mean. |

* No births were reported.

4. The results are far from satisfactory, but it is something to get a commencement even of what must eventually be a fairly trustworthy record. In the first quarter of the year there were 445 births ; 509 in the second ; 562 in the third, and 590 in the fourth. The greatest number in any one month was 218 in October ; the least was 132 in February.

5. The registered Deaths from " *all causes* " during the past five years are here given :—

*DEATHS in the undermentioned Cantonments from* 1868 *to* 1872, *both years inclusive.*

| Cantonments. | Deaths. | | | | | | | | Average Population of the five years. |
|---|---|---|---|---|---|---|---|---|---|
| | 1868. | 1869. | 1870. | 1871. | 1872. | Total in the five years. | Average Annual Mortality. | Ratio per 1,000 on Total Population. | |
| Aden | 30 | 35 | 23 | 78 | 48 | 214 | 42·8 | 20·9 | 2,045·4 |
| Baroda | 40 | 98 | 59 | 80 | 44 | 321 | 64·2 | 18·8 | 3,418·0 |

| Total... ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | 2,232 | Total. |

* Details by months are not shown in the Report.

6. Out of this total of 9,881 there were 5,581 deaths of males and 4,300 of females—a proportion of 100 to 77, the proportion of living being 100 to 75. It should be noted that, for all the Cantonments, the quinquinial mean ratio per 1,000 of deaths is 29·41, and of births 29·7.

7. In 1873 there were 1901 deaths in a population of 71,024—a proportion of 26·8 per 1,000, and 1,049 were of males, 852 of females; a proportion of 55·2 to 44·8. The greatest number occurred in November, the least in February.

*DEATHS in* 1873, *month by month.*

| January. | February. | March. | April. | May. | June. | July. | August. | September. | October. | November. | December. | Total. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 152 | 115 | 145 | 165 | 187 | 128 | 125 | 141 | 177 | 188 | 198 | 180 | 1,901 |
| | — 37 | + 30 | + 20 | + 22 | + 59 | + 3 | + 16 | + 36 | + 11 | + 10 | — 18 | |

8. By class or caste the mortality was:—111 Christians, 493 Mussulmans, 1,047 Hindoos, and 350 "Other Classes;" the respective ratios being 7·5, 27·3, 24·5, 39·5. More than one-fourth of all the deaths, exclusive of still-born, occurred amongst infants under one year old; the highest percentage being 51·5 at Rajkote, the lowest 16·1 at Baroda. This is terribly suggestive.

*TABLE of* Infant Mortality *in* 1873.

| Cantonments. | Under one year, exclusive of still-born | Total deaths from all causes. | Percentage of former to latter. |
|---|---|---|---|
| Aden ... ... ... | 8 | 21 | 38·1 |
| Baroda... ... ... | 10 | 62 | 16·1 |
| Bhuj ... .. ... | 7 | 18 | 38·9 |
| Deesa ... ... ... | 43 | 256 | 16·8 |
| Kolhapur ... ... | 8 | 26 | 30·8 |
| Mahidpur ... ... | ..... | 2 | — |
| Mhow ... ... ... | 178 | 728 | 24·4 |
| Nimach ... ... | 66 | 246 | 26·8 |
| Nasirabad ... ... | 172 | 509 | 33·8 |
| Rajkote ... ... | 17 | 33 | 51·5 |
| Total..... | 509 | 1,901 | 26·8 mean. |

9. Cholera.—There were no deaths in any Cantonment. The following Table shows the Mortality for the previous five years:—

*MORTALITY from* CHOLERA.

| Cantonment. | 1868. | 1869. | 1870. | 1871. | 1872. | Total. |
|---|---|---|---|---|---|---|
| Aden ... ... ... ... | ..... | ..... | ..... | ..... | ..... | ..... |
| Baroda ... ... ... ... | ..... | 2 | ..... | ..... | ..... | 2 |
| Bhuj ... ... ... ... | ..... | ..... | ..... | ..... | ..... | ..... |
| Deesa ... ... ... ... | ..... | 57 | ..... | ..... | ..... | 57 |
| Kolhapur ... ... ... | ..... | 1 | ..... | ..... | ..... | 1 |
| Mahidpur ... ... ... | ..... | ..... | ..... | ..... | 1 | 1 |
| Mhow ... ... ... ... | 9 | 170 | 1 | ..... | 25 | 205 |
| Nimach ... ... ... ... | ..... | 48 | ..... | ..... | 15 | 63 |
| Nasirabad ... ... ... | ..... | 108 | ..... | ..... | ..... | 108 |
| Rajkote ... ... ... ... | ..... | 1 | ..... | ..... | ..... | 1 |
| Total... | 9 | 387 | 1 | ..... | 41 | 438 |

During the previous five years Cholera was most prevalent in the year 1869, when the deaths were 387. Mhow and Nasirabad Cantonments suffered most in 1869. There were no deaths in 1871.

10. SMALL-POX.—There were 52 deaths against 24 in 1872; of these deaths 23 were of males, and 29 of females—a proportion of 100 to 126. Upon the total population of 71,024 the ratio per 1,000 was only 0·7. At Mhow they occurred thus: 1 in January, 4 in February, 7 in March, 6 in April, and 2 in May. At Nasirabad there were 9 in November, and 23 in December. The other Cantonments were free from the disease. The following Table shows the mortality for the previous five years:—

*MORTALITY from* SMALL-POX.

| Cantonments. | 1868. | 1869. | 1870. | 1871. | 1872. | Total. |
|---|---|---|---|---|---|---|
| Aden ... ... ... ... | ... | 2 | 1 | ... | ... | 3 |
| Baroda ... ... ... ... | ... | ... | ... | ... | 3 | 3 |
| Bhuj ... ... ... ... | ... | ... | ... | ... | ... | ... |
| Deesa ... ... ... ... | ... | 4 | 1 | ... | 6 | 11 |
| Kolhapur ... ... ... ... | ... | 1 | ... | ... | ... | 1 |
| Mahidpur ... ... ... ... | ... | ... | ... | ... | ... | ... |
| Mhow ... ... ... ... | 3 | 16 | ... | 7 | 6 | 32 |
| Nimach ... ... ... ... | 1 | 5 | .. | ... | 4 | 10 |
| Nasirabad ... ... ... ... | 24 | 15 | ... | 11 | 5 | 55 |
| Rajkote ... ... ... ... | ... | ... | ... | ... | ... | ... |
| Total... | 28 | 43 | 2 | 18 | 24 | 115 |

11. FEVER.—There were 867 deaths against 1,112 in 1872. Of these deaths 482 were of males, and 385 of females—a proportion of 100 to 80. It was most prevalent in November, and least so during February in both years :—

| Years. | January. | February. | March. | April. | May. | June. | July. | August. | September. | October. | November. | December. | Total. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1872 | 79 | 48 | 65 | 83 | 86 | 59 | 52 | 73 | 122 | 170 | 180 | 95 | 1,112 |
| 1873 | 73 | 50 | 67 | 81 | 89 | 62 | 38 | 48 | 72 | 95 | 118 | 74 | 867 |

As the mortality from Fever always bears a high proportion to that from other causes, it is here contrasted :—

| Cantonment. | Deaths from Fever. | Total deaths from all causes. | Percentage of former to latter. |
|---|---|---|---|
| Mhow ... ... | 283 | 728 | 38·9 |
| Nasirabad ... ... | 239 | 509 | 47·0 |
| Nimach ... ... | 160 | 246 | 65·0 |
| Deesa ... ... ... | 147 | 256 | 57·4 |
| Baroda ... ... | 25 | 62 | 40·3 |
| Bhuj ... ... ... | 4 | 18 | 22·2 |
| Kolhapur ... ... | 4 | 26 | 15·4 |
| Aden ... ... ... | 3 | 21 | 14·3 |
| Rajkote ... ... | 2 | 33 | 6·1 |
| Mahidpur ... ... | ... | 2 | ... |
| Total... | 867 | 1,901 | 45·6 mean. |

The following Table shows the mortality for the previous five years :—

*MORTLITY from* FEVER.

| Cantonments. | 1868. | 1869. | 1870. | 1871. | 1872. | Total. |
|---|---|---|---|---|---|---|
| Aden ... ... ... ... | 6 | 8 | 4 | 28 | 5 | 51 |
| Baroda ... ... ... ... | 22 | 32 | 18 | 29 | 19 | 120 |
| Bhuj ... ... ... ... | 12 | 14 | 11 | 8 | 9 | 54 |

# JAILS.

The mortuary statistics for Jails are given separately, and they show that during 1873 the average strength of prisoners in confinement was—

| | | | | |
|---|---|---|---|---|
| In Jails Proper ..... | 6,452 | against | 5,776 | in 1872. |
| In Subsidiary Jails, &c..... | 2,609 | „ | 2,427 | „ |
| | 9,061 | „ | 7,949 | „ |
| | 7,949 | | | |
| | +1,112 | | | |

The average number of daily sick was—

| | | | | |
|---|---|---|---|---|
| In Jails Proper ..... ..... | 169·9 | against | 150·9 | in 1872. |
| In Subsidiary Jails, &c..... | 70·7 | „ | 73·9 | „ |
| | 240·6 | „ | 240·8 | „ |
| | 224·8 | | | |
| | —15·8 | | | |

The ratios per mille of daily sick to average strength were—

| | | | | |
|---|---|---|---|---|
| In Jails Proper..... | 26·3 | against | 26·1 | in 1872. |
| In Subsidiary Jails, &c..... | 27·1 | „ | 30·4 | „ |
| In all Jails..... | 26·6 | „ | 27·4 | „ |

The admissions into Hospital, and the ratios of the same per mille of average strength were—

| | 1873 | | 1872 | |
|---|---|---|---|---|
| | Admissions. | Ratios. | Admissions. | Ratios |
| In Jails Proper..... | 4,872 | 755·1 | 5,121 | 886·6 |
| In Subsidiary Jails... | 2,289 | 877·3 | 2,638 | 1,086·9 |
| In all Jails..... | 7,161 | 790·3 | 7,759 | 945·9 |

Taking admissions by months, the totals show the following ratios :—

| | | | |
|---|---|---|---|
| **Jails Proper.** | | | |
| In September—Maximum..... | 74·2 per mille | against 95·8 in July | 1872. |
| In March—Minimum ..... | 53·8 „ | „ „ 64·3 in December | 1872. |
| **Subsidiary Jails.** | | | |
| In January—Maximum..... | 95·4 per mille | against 109·2 in November | 1872. |
| In December—Minimum ..... | 60·9 „ | „ „ 73·8 in May | 1872. |
| **All Jails.** | | | |
| In July—Maximum ..... | 78·6 per mille | against 91·7 in July | 1872. |
| In February—Minimum ..... | 57·4 „ | „ „ 68·9 in December | 1872. |

Fever was in excess at the Thana Jail Proper in December, and at Yerrowda Subsidiary Jail in January.

For all Jails with an average strength over 50, the maximum and minimum ratios of daily sick per mille of strength were—

| | | | |
|---|---|---|---|
| **Jails Proper.** | | | |
| Sawantwari—Maximum | 98·7 | against 50·0 at Kaira | in 1872. |
| Kolhapur—Minimum | 4·8 | „ 5·9 at Kolhapur | in 1872. |
| **Subsidiary Jails.** | | | |
| Bakkar—Maximum | 44·7 | against 97·6 at Bakkar | in 1872. |
| Karwar—Minimum | 12·3 | „ 20·3 at Karwar | in 1872. |

Deaths. The deaths and their ratios per mille of average strength were—

| | | Ratio per mille. | | | Ratio per mille. | |
|---|---|---|---|---|---|---|
| In Jails Proper | 211 | 32·7 | against | 182 | 31·5 | in 1872. |
| In Subsidiary Jails | 55 | 21·1 | „ | 57 | 23·5 | „ |
| In all Jails | 266 | 29·4 | „ | 239 | 29·1 | „ |

Death rates. Excluding Jails with an average strength under 50, the maximum and minimum death rates were—

| | | | |
|---|---|---|---|
| **Jails Proper.** | | | |

# NATIVE TROOPS.

**Strength.**

From the official return supplied by the Adjutant General (see Table at page 34) the strength of the Native Army was 25,110, and during the year it was increased as follows :—

| | | | |
|---|---|---|---|
| | | | 25,110 |
| Increase ... | By Recruiting ... ... ... ... | 1,437 | |
| | „ Boys taken on effective strength ... | 65 | |
| | „ Otherwise received ... ... ... | 186 | |
| | | | 1,688 |
| | | | 26,798 |
| | From this gross total there must be deducted on the 31st December 1873 :— | | |
| Decrease ... | By Deaths ... ... ... ... | 263 | |
| | „ Invaliding ... ... ... ... | 908 | |
| | „ Summary dismissal, desertion, &c. ... | 488 | |
| | | | 1,659 |
| | Strength on 1st January 1874..... | | 25,139 |

Deducting from the gross total of 26,798 the 488 removed by causes other than those pertaining to Health, there is a remainder 26,310, and out of this the loss was :—

**Invaliding and death rates.**

By Invaliding 34·5 against 32·3 per mille in 1872.
„ Deaths 10·0 „ 12·9 „ „

The proportion being 2·2 per mille greater by invaliding, and 2·9 per mille less by deaths.

**Mean strength and average daily sickness.**

From the Monthly Returns the mean strength of men serving with their regiments was 23,096 against 23,345, and the average number of daily sick was :—

868·1 against 1067·6 per mile.
37·6 „ 45·7 per mille in 1872.

**Admissions.**

The total number of admissions was 28,881 against 36,503 in 1872, the ratios per mille being 1,250·5 against 1,563·6.

**Maximum and minimum.**

The maximum and minimum of admissions are thus :—

| | | | | |
|---|---|---|---|---|
| 170·4 maximum in October against | 230·9 | per mille in October in 1872. |
| 70·7 minimum in March „ | 78 0 | „ in March „ |

**Comparative health. Value of stations.**

The ratios of daily sick per mille of average strength at the several stations give maximum and minimum as follows :—

| | | | | |
|---|---|---|---|---|
| Burdachowhi, Max. | 154·3 | against | 116·3 | per mille in 1872 at Mahidpur. |
| Maligam, Minn. | 17·4 „ | | 10·5 „ | „ „ Kaladgi. |

**Comparative ratios for different Arms of the service.**

In different Arms of the service the comparative ratios of admissions to strength were :—

| | | | |
|---|---|---|---|
| For Artillery ... | ... 814·7 | against 1,432·7 | per mille in 1872. |
| „ Cavalry ... | ...1,254·0 | „ 1,563·3 | „ „ „ |
| „ Infantry ... | ...1,254·2 | „ 1,603·5 | „ „ „ |
| „ Sappers and Miners | ...1,193·2 | „ 668·6 | „ „ „ |

**Healthiest and unhealthiest Regiments of Cavalry.**

The healthiest Cavalry Regiment was the Poona Horse, quartered at Serur, Dhulia, and Kaladgi ; the unhealthiest was the 3rd Sind Horse, at Jacobabad.

**Do. Do. of Infantry.**

Amongst the Native Infantry Regiments the healthiest was the 6th Regiment, at Belgaum and Kaladgi, and the unhealthiest was the 25th Regiment at Mahidpur and Augur.

**Deaths in Hospital.**

The number of deaths in Hospital was 173—7·4 per mille of mean strength (23,096). In 1872 the number was 243—10·4 per mille of mean strength (23,345).

**Scurvy.**

There were 283 admissions and 4 deaths from scurvy against 263 admissions and 5 deaths in 1872.

## STATEMENT SHOWING THE INCREASE AND DECREASE IN THE NATIVE ARMY FROM 1st JANUARY TO 31st DECEMBER 1873.

*Adjutant General's Office, Poona, 1st January 1874.*

| | | |
|---|---|---|
| Strength on 1st January 1873... ... | | 25,110 |
| *Increase.* | | |
| By Recruiting ... ... ... ... ... ... ... | 1,437 | |
| „ Boys taken on effective strength ... ... ... ... ... | 65 | |
| Otherwise received ... ... ... ... ... ... .. | 186 | |
| | | 1,688 |
| Total ... | | 26,798 |
| *Decrease.* | | |
| By Death ... ... ... ... ... ... ... ... | 263 | |
| „ Invaliding ... ... ... ... ... ... ... | 908 | |
| „ Summary dismissal, desertion, &c. ... ... ... ... ... | 488 | |
| | | 1,659 |
| Strength on 1st January 1874... ... | | 25,139 |

The numbers belonging to the different Arms are as follows:—

| | |
|---|---|
| Artillery ... ... ... ... ... ... ... | 158 |
| Artillery Stores Lascars ... ... ... ... ... | 225 |
| Sappers and Miners ... ... ... ... ... | 471 |
| Staff and Guides attached to Sind Horse ... ... ... | 315 |
| Cavalry ... ... ... ... ... ... ... | 3,495 |
| Infantry ... ... ... ... ... ... ... | 20,475 |
| Total ... | 25,139 |

# SECTION II.

## HISTORY OF THE CHIEF DISEASES.

### CHOLERA.

1. Amongst the general population, and under this heading, the total of deaths registered was only 283, whilst in 1872 it was 15,642. In that year out of every 23·46 deaths 1 was from cholera, and in this year it is 1 out of 1,028·17 In that year it carried off 1 out of every 963·35 living, but happily in this year it is only 1 out of every 57,369·65. Its general distribution is given in the subjoined table, and the total mortality in each district is contrasted with that of 1872, and with the annual average of seven years. The abstract gives it for the 4 geographical divisions into which the 24 Districts are grouped:—

*TABLE showing the total Mortality from Cholera in the undermentioned Registration Districts of the Bombay Presidency.*

| Division. | District. | 1873. | 1872. | Average of 7 years, 1866 to 1872. |
|---|---|---|---|---|
| Deccan. | Khandesh | ... | 1,577 | 888·29 |

| | Thar and Parkar | ... | ... | 105·28 |
| | Shikarpur | ... | ... | 674·29 |
| | Upper Sind Frontier. | ... | ... | 27·29 |

ABSTRACT.

| Division. | District. | 1873. | 1872. | Average of 7 years, 1866 to 1872. |
|---|---|---|---|---|
| | Deccan | 123 | 14,414 | 11,276·43 |
| | Konkan | 107 | 711 | 1,311·14 |
| | Guzerat | 53 | 517 | 1,589·71 |
| | Sind | ... | ... | 1,699·29 |
| | | 283 | 15,642 | 15,876·57 |
| | | | 283 | 283·00 |
| | | | + 15,359 | + 15,552·29 |

2. In the last quarter of 1872 the disease had well nigh died out, and December closed with 19 deaths in the south, in the Belgaum and Kaladgi districts, and 52 midway between south and north, in Poona, Bombay, and Tanna; north of this there was none: this was the state at the close of the year. In January 1873 it disappeared from Tanna and Poona, but in Bombay there were 22 deaths. It is still in the Belgaum and Kaladgi districts, and there are 12 deaths at Dambal in the adjoining Collectorate of Dharwar. In February it holds the south, and Bombay also; and now it appears at intermediate points in the Ratnagiri districts. In March it has disappeared from Belgaum and Dharwar, but there are 12 deaths in the Kaladgi districts, and 17 in Bombay. Far north at Anand, in the Kaira districts, there is 1 solitary death; and at Dolka, farther north in the Ahmadabad districts, there are 5 deaths. In April the whole of the south is free: there are 12 deaths in Bombay, and 15 at Dolka. At Kaira itself there is a death, and then, passing Broach, it next appears in the Surat districts. In May there is a death at Godra in the Panch Mahals, and, except in the Broach districts, there are cases in each of the other collectorates. In Bombay too, there are 8 deaths. During the next 3 months there are a few deaths in Bombay, and a very few in Guzerat; and on the 17th September there is the last case at Surat itself; from this time it disappears, except in Bombay, and here even there are only 7 deaths in the last three months which close the year.

3. On the table-land of the Deccan there was not one single case from the northern borders of Khandesh down to Belgaum, and below this it only lurked for three months. In the Konkan it only appeared in Ratnagiri to die out within 18 days. It never touched Kanara, or Kolaba, or Tanna; but, from January to December, it never left Bombay, and it is more than probable that the 47 deaths, which in Guzerat were spread over 6 months, were indirectly traceable to Bombay.

4. Taking the deaths by months, the maximum is in February; in 1872 it was in August, and for those months the respective numbers were 100, and 3,991. Quarter by quarter the contrast is very startling: for the first of 1873 we have 196 against 256; in the second it is 68 against 4,426; in the third it is 12 against 10,068; and in the fourth it is 7 against 856. These details are better seen thus:—

| | 1873 | 1872 |
|---|---|---|
| January ... ... | 61 | 61 |
| February ... ... | 100 | 82 |
| March ... ... | 35 | 113 |
| April ... ... | 34 | 237 |
| May ... ... | 24 | 1,098 |
| June ... ... | 10 | 3,127 |

| | 1873 | 1872 |
|---|---|---|
| July. ... ... | 6 | 3,932 |
| August. ... ... | 3 | 3,991 |
| September. ... ... | 3 | 2,145 |
| October. ... ... | 3 | 611 |
| November. ... ... | 2 | 174 |
| December. ... .. | 2 | 71 |

ABSTRACT.

| | | |
|---|---|---|
| 1st Quarter | 196 | 256 |
| 2nd „ ... ... | 68 | 4,426 |
| 3rd „ ... ... | 12 | 10,068 |
| 4th „ ... ... | 7 | 856 |
| | 283 | 15,642 |
| | | 283 |
| | | +15,359 in 1872. |

5. With the Cholera Map there are three separate statements: one gives the places in the order of their mortality, another gives the attacks in their order as to time, and the third shows them in their monthly distribution. These statements were only introduced three years ago, but, taken together and read with the map, they give almost all the information that is obtainable; for instance, we can take from them the population of the areas invaded, the numbers who, out of this population, were attacked, the numbers who died, and the proporton of deaths to attacks. In 1871 out of 7,977,806 persons 10,472 had cholera, and 5,821 died from it. In 1872 out of 8,906,932 persons 25,164 had it, and 15,642 died. In 1873 out of 2,434,969 persons there were only 377 attacks and 283 deaths. These details may be amplified thus :—

| Years. | Population of areas invaded. | Total of attacks. | Total deaths. | Of living 1 attacked out of every | Of living 1 died out of every | Deaths to attacks per 1,000. | Of every |
|---|---|---|---|---|---|---|---|
| 1871 | 7,977,806 | 10,472 | 5,821 | 762 | 1,370 | ·56 | 10 attacked 6 died. |
| 1872 | 8,906,932 | 25,164 | 15,642 | 354 | 570 | ·62 | 16 „ 10 „ |
| 1873 | 2,434,969 | 377 | 283 | 6,459 | 8,604 | ·75 | 13 „ 10 „ |
| Mean | 6,439,902 | 2,525 | 7,248 | 2,525 | 3,514 | ·64 | |

6. By our Seasons the mortality is as follows :—

| Months. | Seasons. | 1873 | 1872 |
|---|---|---|---|
| Dec., Jan., Feb., March ... | Cold ... ... ... | 198 | 327 |
| April, May ... ... ... | Hot and Dry... ... | 58 | 1,335 |
| June, July, August, Sept.... | Rainy... ... ... | 22 | 13,195 |
| October, November ... | Hot and Damp ... | 5 | 785 |
| | | 283 | 15,642 |

7. The subjoined statement gives the mortality from 1866 to 1872, both years inclusive:—

*STATEMENT showing, for the Bombay Presidency Registration Districts, the Mortality from* CHOLERA *from* 1866 *to* 1872, *both years inclusive.*

| Division. | No. | District. | 1866. | 1867. | 1868. | 1869. | 1870. | 1871. | 1872. | Total. | Average annual Mortality. |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Deccan. | 1 | Khandesh ... ... | 61 | 37 | 553 | 2,632 | 19 | 1,339 | 1,577 | 6,218 | 888·29 |

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.

† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.

‡ From Health Officer's Reports from 1866 to 1870 inclusive.

|| Prior to 1868 Broach was a portion of the Surat Collectorate.

§ For 1872 the Shikarpur Returns were too imperfect to be published.

8. Since 1869 no deaths have been registered for Sind, so there have been four years of absolute immunity.

## DIFFERENT CIRCLES OF MORTUARY REGISTRATION OF THE PRESIDENCY

During the Year

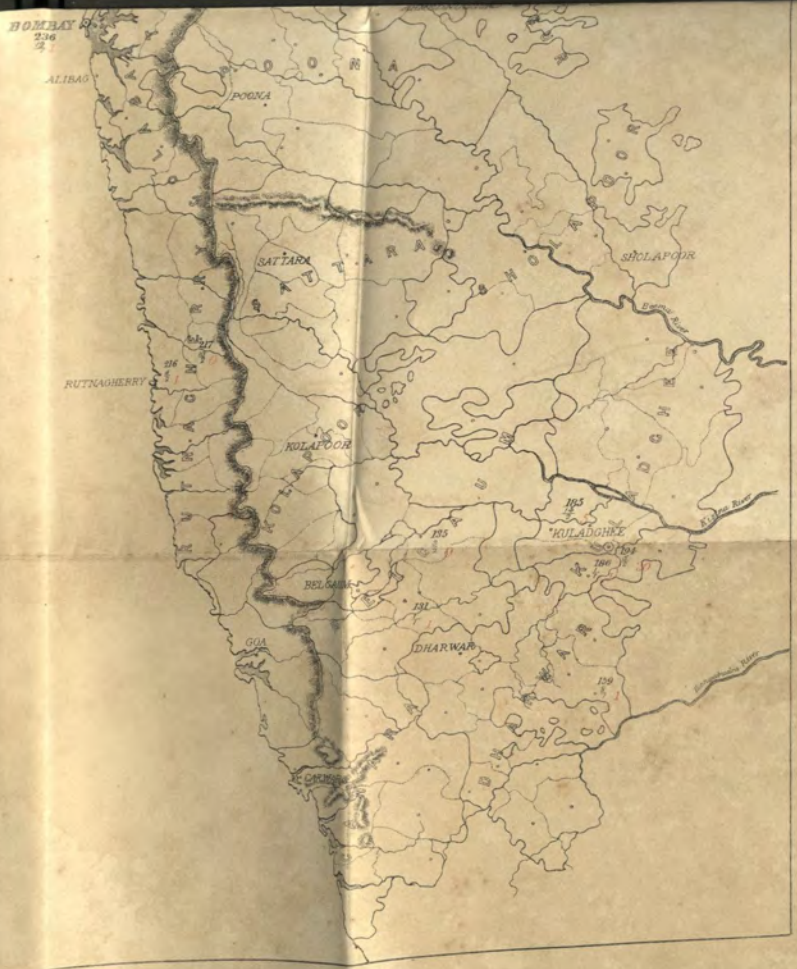
## 1873

Scale.—1 Inch to 32 Miles.

*N.B. The Numbers in Black indicate the Registration Circles as given in the Monthly and Annual Standard Forms*

*The figures in Red show the mortality from Cholera per 10,000 of the population*

*The fractional figures indicate the date of first cases in each circle. Thus ½ means the 2nd July*



Photozincographed. Govt Office, Poona. 1874.

## Small-pox.

9. From this disease the deaths were 9,935 against 26,699 in 1872, and the following is the distribution :—

| Division. | District. | 1873. | 1872. |
|---|---|---|---|
| Deccan. | Khandesh | 793 | 2,696 |
| | Nasik | 170 | 2,152 |
| | Ahmadnagar | 410 | 2,254 |
| | Poona | 302 | 2,121 |
| | Satara | 594 | 2,518 |
| | Sholapur | 228 | 2,343 |
| | Belgaum | 299 | 3,133 |
| | Dharwar | 1,250 | 2,653 |
| | Kaladgi | 331 | 1,765 |
| Konkan | Kanara | 432 | 1,170 |
| | Ratnagiri | 712 | 374 |
| | Kolaba | 141 | 94 |
| | Bombay City | 709 | 1,854 |
| | Tanna | 1,117 | 780 |
| Guzerat. | Surat | 454 | 105 |
| | Broach | 166 | 74 |
| | Kaira | 1,336 | 133 |
| | Panch Mahals | 106 | 9 |
| | Ahmadabad | 365 | 201 |
| Sind. | Kurrachee | 68 | 148 |
| | Haidarabad | 5 | 95 |
| | Thar and Parkar | ..... | 16 |
| | Shikarpur | 5 | ..... |
| | Upper Sind Frontier | 2 | 11 |

ABSTRACT.

| | 1873. | 1872. |
|---|---|---|
| Deccan | 4,317 | 21,635 |
| Konkan | 3,111 | 4,272 |
| Guzerat | 2,427 | 522 |
| Sind | 80 | 270 |
| Total | 9,935 | 26,699 |
| | | 9,935 |
| | | * 16,764 in 1872 |

10. Last year in 8 out of the 9 Deccan Districts the deaths in each exceeded 2,000, and the minimum was 1,765; but this year in 6 out of the 9 the

numbers are below 500, and the maximum, in Dharwar, is 1,250. In this one Division alone—the Deccan—the deaths are less by 17,318 than in the year preceding. For the Konkan collectively the total mortality exceeded that of last year by 1,161, and it is only in the Kanara Districts and Bombay City that it is less. In every district of Guzerat it was higher, and, for the Division, the excess over last year was 1,915. In Sind the numbers are 80 against 270; so for this year the balance is 190 in its favor, but in this province the areas and the reliable supervision are in inverse ratios, and the value of the returns generally is somewhat depreciated. It is generally supposed that small-pox comes in with the cold weather, and it is clear that the majority of the deaths occur in the first half of the year. This is seen on showing them by months thus :—

| | 1873. | 1872. |
|---|---|---|
| January ... ... ... | 1,184 | 2,060 |
| February ... ... ... | 1,523 | 3,810 |
| March ... ... ... | 1,961 | 5,247 |
| April ... ... ... | 1,662 | 4,482 |
| May ... ... ... | 1,240 | 3,479 |
| June ... ... ... | 885 | 2,540 |
| July ... ... ... | 536 | 1,661 |
| August ... ... ... | 301 | 1,082 |
| September ... ... ... | 170 | 558 |
| October ... ... ... | 127 | 439 |
| November ... ... ... | 160 | 624 |
| December ... ... ... | 186 | 717 |

ABSTRACT.

| | | |
|---|---|---|
| 1st Quarter... ... ... | 4,668 | 11,117 |
| 2nd „ ... ... ... | 3,787 | 10,501 |
| 3rd „ ... ... ... | 1,007 | 3,301 |
| 4th „ ... ... ... | 473 | 1,780 |
| | 9,935 | 26,699 |
| | | 9,935 |
| | | + 16,764 in 1872 |

11. Here in 1872 there are 21,618 deaths in the first half of the year against 5,081 in the second, and in 1873 it is 8,455 against 1,480. By seasons, too, the difference is also striking :—

| Months. | Seasons. | 1873. | 1872. |
|---|---|---|---|
| Dec. Jan., Feb., March ... | Cold ... ... ... | 4,854 | 11,834 |
| April, May ... ... ... | Hot and Dry ... | 2,902 | 7,961 |
| June, July, August, Sept. ... | Rainy ... ... | 1,892 | 5,841 |
| October and November ... | Hot and Damp ... | 287 | 1,063 |
| | | 9,935 | 26,699 |
| | | | 9,935 |
| | | | + 16,764 in 1872. |

12. The death rate in 1872 was 1·83 per 1,000, and in 1873 it was only ·61. The following table gives the mortality for seven years, from 1866 to 1872, both years inclusive :—

*STATEMENT showing, for the Bombay Presidency Registration Districts, the Mortality from* SMALL-POX *from* 1866 *to* 1872, *both years inclusive.*

† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.

‡ From Health Officer's Reports from 1866 to 1870 inclusive.

§ Prior to 1868 Broach was a portion of the Surat Collectorate.

‖ For 1872 the Shikarpur Returns were too imperfect to be published.

## Fever.

13. When deaths are registered without the qualifying attestation as to cause, there must always be great difficulty in assigning them under specified heads; nor is the difficulty lessened by the persistency with which almost every Native will ascribe to Fever, in its most elastic sense, almost every death for which he cannot find a cause so prominent as to be unmistakable even to him. Presumably it was intended that the fever column of the register should exhibit deaths from the intermittent type only; but, without a doubt, it has always included the others, and not these alone, but other diseases in which the fever was merely a well marked symptom. However, as regards our primary object (the improvement of the public health) there is just this to be said; the deaths which are now inadvertently ascribed to Fever, are most of them brought about by causes which are more or less preventible, and the measures which would tend to lessen the one evil, would most assuredly mitigate the others. The recorded total of deaths is 188,201, and their distribution is that here given. The Collectorates of Khandesh, Poona, and Satara give, for both years, the highest numbers for the Deccan, and Tanna has an unenviable prominence in the Konkan. In Guzerat, too, Surat, Broach, and Ahmadabad give high totals, and in Sind the O for Shikarpur means that the returns were too imperfect. Nothing could be made of them.

| Division. | District. | 1873. | 1872. |

*The returns for Shikarpur were too imperfect to be published.

14. It will be seen that in 1872 the mortality was higher by 18,546, and the respective death rates for that year and for 1873 were 14·19 and 11·59. In Dr. Bryden's tables the mean rate for 13 years is 4·98, but this is for British Troops well housed, well fed, well clothed, well cared for. Our rate represents poverty, exposure, bad dwellings, bad food, bad water, inadequate clothing, and downright want. By months, quarters, and seasons the deaths occurred as here shown:—

| Months. | 1873. | 1872. |

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.

† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.

‡ From Health Officer's Reports from 1866 to 1870 inclusive.

§ Prior to 1868 Broach was a portion of the Surat Collectorate.

‖ For 1672 the Shikarpur Returns were too imperfect to be publihsed.

## Bowel Complaints.

15. Under this heading there are registered deaths from diarrhœa and dysentery, and their total for the year was 26,259 against 33,664 in 1872. The following was their distribution, and it will be seen that, again in this year, the maximum was at Dharwar :—

| Division. | District. | 1873. | 1872. |
|---|---|---|---|
| Deccan. | Khandesh | 2,098 | 3,004 |
| | Nasik | 1,106 | 1,950 |
| | Ahmadnagar | 1,536 | 2,072 |
| | Poona | 1,646 | 2,103 |
| | Satara | 2,484 | 4,004 |
| | Sholapur | 941 | 1,702 |

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.

† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.

‡ From Health Officer's Reports from 1866 to 1870 inclusive.

§ Prior to 1868 Broach was a portion of the Surat Collectorate.

‖ For 1872 the Shikarpur Returns were too imperfect to be published.

## Accident or Violence.

18. From other than natural causes 5,951 deaths were registered, and here I would call attention to the remarks in para. 13, page 10. Of these deaths 3,538 were of males, and 2,413 of females; a proportion of 100 to 68·2. Under the four headings of the standard form they appear thus:—

| | Males. | Females. | Total. |
|---|---|---|---|
| By Suicide ... ... ... ... ... | 340 | 466 | 806 |
| „ Wounding .. ... ... ... | 247 | 131 | 378 |
| „ Accident... ... ... ... ... | 1,177 | 1,024 | 2,201 |
| „ Snake-bite, or wild beasts, or otherwise. | 1,774 | 792 | 2,566 |
| | 3,538 | 2,413 | 5,951 |

19. Under the system in vogue throughout this Presidency the following is the arrangement:—

| | | Males. | Females. | Total. |
|---|---|---|---|---|
| By Drowning. | Suicidal ... ... ... ... ... | 153 | 346 | 499 |
| | Accidental ... ... ... ... | 982 | 963 | 1,945 |
| | Otherwise ... ... ... ... | 118 | 79 | 197 |
| „ Poisoning. | Suicidal ... ... ... ... ... | 24 | 33 | 57 |
| | Accidental ... ... ... ... | 27 | 8 | 35 |
| | Otherwise ... ... ... ... | 22 | 10 | 32 |
| „ Hanging... | Suicidal... ... ... ... ... | 133 | 79 | 212 |
| | Accidental ... ... ... ... | 13 | 6 | 19 |
| „ Wounding. | Suicidal ... ... ... ... ... | 30 | 8 | 38 |
| | Accidental ... ... ... ... | 155 | 47 | 202 |
| | Otherwise ... ... ... ... | 107 | 42 | 149 |

## ABSTRACT.

| | Males. | Females. | Total. |
|---|---|---|---|
| By Drowning ... ... ... ... ... ... | 1,253 | 1,388 | 2,641 |
| „ Poisoning ... ... ... ... ... ... | 73 | 51 | 124 |
| „ Hanging ... ... ... ... ... ... | 146 | 85 | 231 |
| „ Wounding ... ... ... ... ... ... | 292 | 97 | 389 |
| „ Wild Beasts ... ... ... ... ... ... | 86 | 35 | 121 |
| „ Snake-bites ... ... ... ... ... ... | 702 | 370 | 1,072 |
| „ Other Causes ... ... ... .. ... ... | 986 | 387 | 1,373 |
| Total ... | 3,538 | 2,413 | 5,951 |

20. They are here shown as they were distributed throughout the several Districts, and as they occurred by months, quarters, and seasons :—

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.

† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.

‡ From Health Officer's Report from 1866 to 1872 inclusive.

§ Prior to 1868 Broach was a portion of the Surat Collectorate.

‖ For 1872 the Shikarpur Returns were too imperfect to be published.

# SECTION III.

## METEOROLOGY.

The subject of Rainfall has been noticed at length in the first part of this Report, and the following Table gives the fall for the year:—

*RETURN showing the Rainfall for the year 1873 at the subjoined Stations, compiled from Weekly Returns submitted to this Office and published in the weekly "Government Gazette."*

### GENERAL REPORT UPON THE TOWN OF PANDHARPUR, AND THE RELIGIOUS GATHERINGS HELD THERE.

As this place is a constant source of anxiety to Government, now on account of its water-supply, now its drainage, or its sanitary condition, or its religious gatherings and the many wants to which they give rise; as, moreover, much has been written and said about it at long intervals, and as the references are voluminous and somewhat scattered: I have thought it better to re-cast and re-write what has already been written by others—much better, but at greater length—so that all connected with the place may be brought under one cover.

#### Topography.

2. Pandharpur is, according to Dr. Leith, in Lat. 17° 41′ N. and Long. 75° 24′ E. It is on the right bank of the Bheema river, here called the Chundrabaga. The surrounding country is generally uninteresting and unattractive—a minimum of wood, and a maximum of seemingly barren plain. The rock is trap, and wherever there is any depth of soil it is black, loaded with quartz chips and kunkur nodules, which are here burnt for lime. Obviously the general slope is towards the river. Being a centre of pilgrimage, its radii extend in every possible direction, and the G. I. P. Railway has become the main feeder, the station being that at Barsi Road. Here, in addition to the ordinary waiting-room, there is a small bungalow belonging to the Public Works Department, and tongas and carts can be hired. For pilgrims there are two dhurrumsalas: one built in 1860 by Mr. Lukmidas Dhamji, the other by Mr. Narayen Dhurrumsee Joshi in 1871. Both are maintained by the founders, and the accommodation is in much request. From the station to Pandharpur the distance is 31 miles; and, for 30 of these, an excellent road has just been constructed at a cost of Rs. 86,044, defrayed from Local Funds; and its first grant for maintenance has also been sanctioned, for 1873-74, amounting to Rs. 4,650 = Rs. 155 per mile. It crosses 56 nullas, large and small, and 41 of them have already been bridged; the remaining 15 will probably be done during the current year. The 31st mile leads to the river through fields of black soil; but when the great bridge is built the road will of course be continued over it into the town. There is a good travellers' bungalow at Sheitphul, between the 13th and 14th mile-stone, and ordinary supplies are procurable in the village.

3. The land immediately outside of the town is nearly all under cultivation, and most of it is black soil, as is that within the town. The boundary on the north is a nulla, in which there is a small stream nearly all the year round; and a bund has been thrown across it to dam back its waters, and prevent flooding. On the west and south, the boundary is also a nulla which, running southerly, joins a larger; and the two united fall into one yet larger, the Kasegaon nulla, which reaches the river just below the Temple of Kala Gopal, where

a wooden bridge has been constructed. About half a mile on the west is the Pudmawuttee Tank, on a somewhat higher elevation than the town; but, the rock being porous, the water escapes except in the rains. Still farther in this direction is a ridge of amygdaloidal trap with its gravel, and beyond this again is the new reservoir for the water-supply of the place. The river channel in front of the town is some 300 yards wide; but it is only full during a part of the rainy season, and in October even it is fordable *above* the Town. There are numbers of ferry boats during the monsoon, and they ply a busy trade; but after November they are not wanted. The horses' heads which ornament the prows of these boats are striking replicas of those on Grecian marbles.

## Climate.

4. The general character of the Climate is much the same as at Sholapur, only 38 miles distant; and the following tables are for Temperature, Rainfall, and prevailing direction of Wind:—

*The Monthly Rainfall at Pandharpur during the years* 1865, *and* 1867 *to* 1870.

## THE TOWN.

5. The Town covers an area of some 150 acres, and has a river frontage of about a mile. It stretches back from a quarter to half a mile. On the ruins of byegone years the central portion has risen to a somewhat higher level, and in this quarter the houses are comparatively well built; many of them of two or more stories, and with good cut-stone plinths. Their faulty construction has thus been noticed by Dr. Leith :—"The street-door gives entrance to a paved room, in which any cattle the family may have are kept, and in a corner of which the house privy, if there is one, is placed; the place is dark and offensive. The visitor is then led up a narrow stair to the upper rooms, which are small and low, and badly lighted by means of a central shaft, called the *chauk*, that passes upwards from the foul ground floor, and is from four to eight feet square, and is open to the sky at all seasons. The rooms on the different floors in the larger houses are arranged round the *chauk* like galleries, to benefit by its ligth. In the smaller houses it serves also the purpose of a chimney. The roof water falls through this shaft to the basement pavement, from which it passes by the house drain into the street sewer. The terraced roof is generally of clay, which is said to bn sufficient to resist the rain, which falls lightly here. Besides the opening of the central shaft, many houses have small chimneys from the cooking-rooms risine through the roof. There is often a little turret, called *sujja*, eight or ten feet higg on the roof, and large enough for one or two persons to sit and enjoy the cool breeze."

It is only necessary to add, that the "house drain" here alluded to is invariably of the rudest description, whilst the "street sewer" is merely a covered gutter. In the north and west quarters the houses are small and insignificant, many being mere huts and hovels. Except on the north, the place is closely built over. There is a large outlying suburb on the south. By the Census of 1851 there were 2,100 houses and 14,000 permanent inhabitants.

6. Prior to the establishment of a Municipality in 1855, most of the streets were roughly paved like those now surrounding the temple, and in each there was a centre drain, dry laid, and covered. When the Municipality re-formed the streets, and replaced the paving with moorum, these centre drains were abolished and replaced by open side drains, which were made square, without any regard to slope, and without any proportion to discharge. However, within the last year, they have been taken in hand by the Native Supervisor in charge of the water works, and more than three-fourth of them have been re-laid, sloped, and covered; angles have been rounded off, and the outlets at the principal Ghauts improved. There are eight of these outlets on to the river, and four to the south-west into the boundary nulla. Since water has been laid on to the town, there has been a sensible increase in the discharge; but at the time of my visit—October—it never reached the river. There used to be many cesspools, mere excavations, but most of them have been filled in. The streets or roads are of three kinds :—

1.—*Main.* Repaired annually with gravel or moorum, and having open side drains, dry laid, and generally faulty. In the markets these side drains are covered, but in none of them is there anything approaching to a regular flow, and flushing is out of the question.

2.—*Bye lanes.* Rough trap pavement, with centre drain, dry laid, and covered.

3.—*Lanes.* Un-made, un-drained, un-kept, un-repaired; mere tracks from place to place.

7. There are 10 Butchers' shops in the north quarter, and 4 in the south; and the animals, sheep and goats only, are killed on the premises—generally alongside of the roadway. The ordinary daily numbers vary from 2 to 12, but on great festivals they run up to as many as 500. There is no escape for the blood except by soakage; the offal is removed, or is supposed to be, by the Municipal Scavengers, and the skins are disposed of to Chambhars, who tan them.

8. There are only 2 Tanners, and their places are in the southern suburb; but without a doubt the Moochees also cure a good deal of their own leather, in their own houses.

9. There are 8 Lime-burners, and 2 Tile-makers, all in the southern suburb.

10. There are 4 Dyers in Kasumba, none in Indigo.

11. There are 50 milch cattle stables in different parts of the Town, and in them there are 350 buffaloes, and 100 cows; but the total number of milch cattle is 440 buffaloes, and 730 cows; so 90 of the one and 630 of the other would appear to be kept in private houses, most of them dwelling-houses.

12. There are the usual shops for grain, condiments, cloths, images, and the many articles that are wanted in large communities. A noted article of trade is the *Kuree*, or silk stamped with gold and silver flowers and patterns.

13. The burning-place for the Hindoo dead is nearly a mile below the Town on the river; but it is the same here as everywhere else—cremation is only imperfectly carried out. There is a burial-ground in this direction for those who cannot afford to burn; and the Mussulman cemetery is also here. On the north of the Town, there is a small piece of ground were ascetics are interred; but their number is small, and their burials few.

14. There is a Municipality of which the Collector of the District is *ex-officio* the President, and the Secretary exercises a general supervision over conservancy and other matters. The income for 1872-73 was Rs. 39,061-13-11, and the expenditure was Rs. 38,321-6-6. The expenditure on sanitation was Rs. 9,222-9-3 = 23-6 per cent. on the total income.

15. For surface conservancy there are 16 men, but more are engaged when necessary. Twelve are employed to sweep the streets, and four to collect the refuse. For this there are 4 carts, and it is taken to a spot near the river bank nearly a mile distant, and it is purchased by the Potters and Lime-burners. It realises about Rs. 200 a year. It is only too evident that, with this working power, the service cannot be efficiently rendered.

16. There are 16 public urinaries in different quarters. Their general construction is the same—a pitched pavement draining into the centre or side drains, and dwarf well-screens. Their construction is faulty, but during the Jutras they are kept tolerably clean, by a profuse expenditure of disinfecting powder. They are distributed as follows:—

3 On the west of the temple.
3 On the south ,,
3 On the north ,,
5 In the eastern quarter.
3 In the central portion.

17. There are 37 Municipal Halalcores, and 4 night-soil box-carts, each supposed to hold 900 lbs. They are wretched things, badly made, a back trap badly fitted, no lids, and almost worn out. The night-soil is taken to a spot about two miles south of the Town, on the Kasegaon road, and there discharged. At this place, on perhaps the most rocky patch in the locality, pits are dug at discretion and filled in haphazard. They are horribly offensive, no earth is thrown into them, and their entire control seems to be left to the Wuddars who dig them. They are just alongside of a field in which the whole of the night-soil might be utilized. There are 583 private privies served by Municipal Halalcores, so each man has 15. Their construction is everywhere faulty, but no opportunity is lost of rebuilding them on a better plan. In the matter of public privies the Town has been singularly unfortunate, and all apparently from the want of common sense advice. In April 1863 a sum of Rs. 3,169 was expended in building one; but, when it had been run up as high as the seats, it was found that it was

dead to windward, and it was stopped. In November 1865 another was built on the north of the Town; there were 102 seats, and the cost was Rs. 2,527, but it was so bad, that it had to be closed. In January 1866 others were built on the south of the Town, 52 seats costing Rs. 1,170; and these again were given up. Three successive failures, together costing Rs. 6,866.

### Trench Latrines.

18. There are trench latrines for females on the south of the Town at the nullah just beyond the bridge on the Kolhapur road; the area enclosed is 600′ × 200.′ In the same direction, but farther away, are the trenches for males, area 500′ × 300,′ and on the north are others; the area here is 800′ × 200′, and it is divided for the sexes. In the first enclosure there are 106 trenches, 87 in the second, 83 in the third: 276 altogether. They are 2 feet broad, 2 feet deep, and about 3 feet apart, and all of them are in loose black soil. The entire area taken up is 2,000′ × 700.′ The trenches are opened in April, July, and October, for the Chaitra, the Ashadi, and the Kartiki Jatras; and at these times special gangs are engaged to serve them. When the Jatra is over, they remain open for the use of the permanent residents; but before the next Jatra they are closed, and others opened in the intervals: these are similarly treated. The same sites have now been occupied for 8 years, and when the trenches are re-opened the earth is inodorous and inoffensive.

19. During last year 77 sweepers, chiefly Mhangs, were specially engaged from the 4th to the 12th July, and 80 were engaged in October. They were told off for the different trenches; but, admitting that all did their best under the circumstances, the conditions are so hopelessly bad, that nothing short of complete change could bring about improvement. In 1870 I saw these same trenches, and then described them as perfectly horrible; and, if they were bad then, they are worse now except in one respect. The earth that was then piled up between them, effectually barring access, has now been removed, and it is supposed to be used for deodorization. In other respects they are far worse, for the breeze, that could then pass along the surface, has now been stopped, by order. Each site is now surrounded by ditches and huge embankments, as though it were a fortified post, and the very screens across the entrance are formidable earthworks some 50 feet long, and proportionality high and broad. Not content with embankments from 8 to 10 feet high, more money has been expended in crowning them with milk-bush hedges; so the total height is about 15 feet. If the object was to insure privacy, it was more than attained by the embankments; so any way the hedges are superfluous. They can hardly have been planted to bind and consolidate, nor are they ornamental, if ornament were needed; nor can they have been intended to keep out stray cattle, for at intervals there are openings for ingress and egress, and through these a village herd might pass. In this instance again a sum of Rs. 1,799-14-8 has been worse than wasted. The condition of these places is perfectly appalling; no words can describe their loathsome and indecent foulness, no language can too strongly condemn them. Cattle and pigs wander through them at will, and hardly wait for places to be vacated. The stench too is so fearful, that it is positive cruelty to compel the people to resort to them.

20. This condition is the inevitable result of their edges being trodden down by those who use them; they are literally crumbled away until a mere shelving depression represents what was originally a well made trench. This was pointed out in 1870, and I then suggested that platforms should be made up, and so placed as to protect the edges. They were to be in lengths of 8 or 10 feet, to admit of their being shifted from trench to trench, and were to be made of common rough planking, nailed on to cross pieces, the slot being 7 inches wide, so that, in squatting, a foot might be placed on either side. In the diagram, here reproduced, they were shown as they would be turned out by skilled workmen;

but the finish was a very secondary consideration, and they might have been made up in any town or village in which a country cart could be repaired. If planking was not to be had, stout poles laid lengthwise, with cross pieces, would have done almost as well; in fact, anything would have answered that preserved the edges, and ensured the deposit falling into the trench.

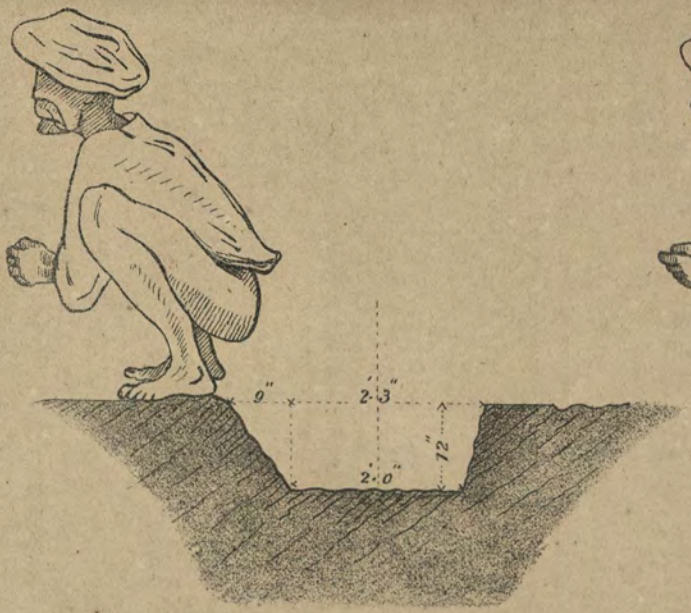
21. Of these platforms, Colonel Bell reported that they "do not commend themselves as being in any way suitable, nor, indeed, in any way necessary, if trench latrines are properly prepared." Knowing what is the soil at Pandharpur, and knowing something of the numbers for whom they are required, it would have been more to the point had Colonel Bell shown *how* they should be "properly prepared." My own experience in making them is as great as that of most men, and is perhaps more practical, for it was gained as Sanitary Officer to an Army in the field. Upwards of sixteen years ago I first made them for Sir Hugh Rose's camps in Central India; and at Zula, in Abyssinia, they were made under my directions for some 30,000 men and followers. The veriest tyro must know that, in the matter of trenches, *maintenance* is a more important factor than *making;* and Colonel Bell even, with all his experience, could not, without special provision, prevent the erosion represented in figures 2 and 3 of the diagram. No. 1 shows a trench "properly prepared," but in loose soil; No. 2 shows it as would be by the time some 50 or 100 persons had used it; and No. 3 shows it yet further destroyed. From 2 and 3 it will be seen what are the contingencies for which special provision is needed, and it may be judged how far the proposed platforms were suitable and necessary.

22. Another suggestion of mine was not only set aside, but the Bible was quoted in judgment against it. I ventured to propose that the trenches should be curtailed in their length, and deepened, so as to bring them more together as it were. It seemed to me that, as pits, with platforms over them, they would be just as effective, and could be more easily looked after. Colonel Bell wrote of this proposal as follows:—"In the matter of trench latrines 'deep pits' should not, it is thought, be provided. Dr. Lumsdaine's opinion, that 'whether they (the trenches) be $1' \times 1'$ or $5' \times 5'$ the principle is the same,' is not concurred in; nor is there considered to be ground for his expectation that, in re-opening deep pits 'in March or April of the following year, the process would be quite harmless.' Much of the deodorizing and disinfecting power of the sun must, it is thought, be lost by depth in the manured soil, and also much of the power of cultivation to render it innocuous * * * * There is nothing to show that the Israelites in camp ever deviated from the shallow surface system for each person (Deuteronomy, Chapter XXIII., Verse 13), and adopted that of "deep pits," even on occasions of long halts."

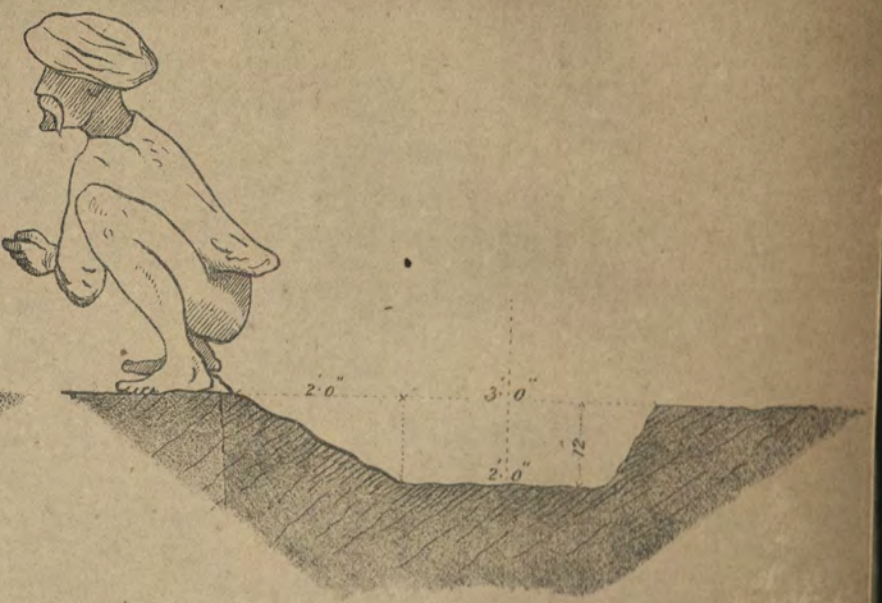
23. Nothing that I can say is likely to make Colonel Bell change his opinion; but I repeat without hesitation that, in all cases where earth is used as the deodorizer for excremental matters, *the principle* IS *the same.* As Corfield has pointed out, not only is there a certain disintegration of the fœcal matters, and a combination between earth and the organic matters contained in the excrement; but, after a time, no excremental matter whatever can be detected in the mixture;—everything disappears, even paper. It matters not whether the experiment be made with two ounces of fœces and a pound of earth, or with a pound of fœces and eight pounds of earth; it may be made in the open air, or in a room, in a commode, or a length of 12" glazed pipe, in a shallow trench, or a deep pit: it *has* been made in one and all of these ways, and the result has always been the same. Colonel Bell, if he be so inclined, may make it in his own compound, and thus test the truth of my statement. Let him sink a pit $1' \times 1' \times 5'$, and let it be filled for 18 inches with fœces mixed with earth, as they would be mixed were the pit in actual use under supervision; let the next 12 inches be earth only, black soil as at Pandharpur; let the next 18 inches be fœces and earth, like the first 18, and let the top layer be 12 inches of earth only. Let this pit be closed on the 15th of May, and re-opened on that day

Nº 1.

Nº 2.



Nº 3.



SCALE 2 FEET TO AN INCH.

twelvemonth. The contents will then be a rich mould, inodorous, and so inoffensive that it may be rubbed between the hands like ordinary garden earth. If he would deal with smaller quantities, here is another experiment, also within his reach:—

*NIGHT-SOIL with Water and Urine as taken direct from the House Privy and mixed with ordinary road scrapings, dried and sifted.*

| One lb. of night-soil mixed with | Mixed between 7 and 8 A.M. | 1st day. | 2nd day. | 3rd day. | 4th day. | 5th day. | 6th day. | 7th day. |
|---|---|---|---|---|---|---|---|---|
| One lbs. Road Scrapings | Soft, very offensive, liquid absorbed. | Offensive, soft, full of maggots. | Soft, offensive, few maggots. | Drier, but offensive. | Drier, slightly offensive. | Dry, slightly offensive. | Dry, sligthly offensive. | Dry, slightly offensive. |
| Two lbs. Do. | Softish offensive. | Offensive, softish, maggots. | Offensive, softish, few maggots. | Dry, slightly offensive. | Dry, slightly offensive. | Dry, slightly offensive. | Dry, slightly offensive. | Dry, very slightly offensive. |
| Three lbs. Do. | Soft, less offensive. | Dryish, slightly offensive, no maggots. | Dryish, slightly offensive, no maggots. | Dry, slightly offensive. | Dry, slightly offensive. | Dry, slightly offensive. | Dry, slightly offensive. | Dry, very slightly offensive. |
| Four lbs. Do. | Dryish, slightly offensive. | Dryish, very slightly offensive. | Dry, earthy inoffensive smell. | Dry slightly earthy smell, inoffensive. | Dry, very slight smell, earthy. | Dry, slightly offensive. | Dry, slightly offensive. | Dry, very slightly offensive. |
| Five lbs. Do. | Dryish, slightly offensive. | Dry, hardly any smell. | Dry, inoffensive slight earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. |
| Six lbs. Do. | Dryish, slightly offensive. | Dry, night-soil smell imperceptible. | Dry, slight earthy smell, inoffensive. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. |
| Seven lbs. Do. | Dry; could be rubbed in hands; slightly offensive. | Dry, very faint smell | Dry, earthy smell, inoffensive. | Dry, slight earthy smell, inoffensive. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. |
| Eight lbs. Do. | Dry; could be rubbed in hands; slightly offensive. | Dry, no offensive smell at all; slight earthy smell. | Dry, inoffensive, slight earthy smell. | Dry slightly earthy smell, inoffensive. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. | Dry, inoffensive earthy smell. |

24. This experiment was most carefully conducted in all its details, and the results have a value far beyond all *ex cathedra* theory; but if further proof be wanted, that "deep pits" may be used, closed, and re-opened without danger, there are the earth closet trials at Wimbledon. Here pits were dug 4′·5 by 5′, (mine were to be 2′ by 5′) and over them were constructed 108 closets and 46 urinals; the volunteers numbered 2,300, and there were 34,792 visitors. It is calculated that the closets were used once a day by 3,000 persons, and the public urinals more than 10,000 times a day. It is also calculated that 1,000 lbs. of solid and over 3,000 pints or lbs. of fluid excrement were deposited daily, so the test was a severe one. In 1868, the first year of trial, there was an insufficient supply of earth, and the mechanism was frequently out of gear; the consequence was that, when the pits were emptied, during the summer of 1869, "a bad smell was produced during the operation." At the next meeting, in 1869, there was greater care of details; and when the pits were opened, *directly* after the meeting, "very little smell was noticed."

25. There is also the report of the Committee appointed in 1872 to examine the trench latrines of the 8th Regiment N.I. at Poona. These trenches were of moderate depth, in black soil, and a covered-in slot platform on wheels, like a railway wagon, used to work along their length. The following extract is from the report:—

"1*st Trench.*—Under the supervision of Mr. Norman, and in the presence of the Committee, a trench to the eastward of the road, which had been covered in for twelve months, was opened out, when the ordure exposed was found to be light, spongy, free from odour and quite decomposed.

"2*nd Trench.*—A second trench, which had been closed in for a period of nine months, was next opened out in the same manner, when the excrement was again found spongy, decomposed, and inodorous.

"3*rd Trench.*—The Committee then caused a trench in which the ordure had been buried for six months to be opened, and found it to be of the same spongy texture, inodorous and decomposed; but retaining more of the colour and appearance of recent fœcal matter than that in the two previous trenches examined.

"4*th Trench.*—In the fourth trench opened, and in which the ordure had been covered in from three to four months, the fœces were found to be decomposed and inodorous; and in a fifth trench, which had been closed only for a period of from two to three months, the Committee found the excrement which had been deposited in it, converted into a dark, spongy, inodorous mass.

"A microscopical examination of a portion of the fœcal matter from the trench which had been covered in for six months, gave the following result:—

1*st.*—Disintegrated vegetable matter.
2*nd.*—A large number of starch grains.
3*rd.*—Seed envelopes, broken up, of the cereals in common use as food.
4*th.*—A few vegetable cells; spiral vessels and woody fibre.
5*th.*—Earthy matter, such as lime, silica, &c.

"No signs of living or dead animal matter were found.

"Infusoria made their appearance when the mass had been in water twenty-four hours."

26. I trust that enough has now been said to prove, that "deep pits" might not only have been used with advantage, but that they might have been re-opened with impunity, and emptied. The advantages of cultivation were never questioned; but it had never been carried out, nor is there much prospect of its being tried at Pandharpur. Colonel Bell says "there is nothing to show that the Israelites in camp ever deviated from the shallow surface system;" but is there any proof that they ever adopted it? He quotes the Mosaic precept; but can he say what was the Israelitish practice. As well might I urge that Bombay drains are trapped, because the Municipal Act says that they *shall* be trapped.

## Water Supply.

27. Until very lately the river was the main source of supply, and it was taken so carelessly, that nine times out of ten it must have been impure. There are but 2 public wells, and one only yields good water. Of private wells there are 15, and 5 of them are open to the public. Three are in the southern suburb, in questionable proximity to the Mussulman burial-ground, one is near the Temple, and one is in the north quarter, near the Isbawee road. Dr. Lyon's analyses of the river and well waters are appended.

*REPORT of the Analysis of a sample of* WATER *from the Chundrabhaga (Bheema) River below the Temple of Poondlik at Pandharpur.*

The water was contained in stoppered bottles; measured about one gallon; arrived at the Laboratory 7th December 1870.

Sediment: Abundant—reddish-brown sand—vegetable debris—paramecia. Numerous highly organized bodies.

The mineral impurities of this water appear to me to be by no means excessive in amount, or particularly deleterious as regards quality; but the high figures obtained for the ammonia determinations, and the high organized class of animal life present in the sediment, show that the water is contaminated to a considerable extent with organic matter, probably of the most deleterious character.

*REPORT of the Analysis of a sample of* SPRING WATER *from "Amrootrao's Well" in the Town of Pandharpur.*

The water was contained in stoppered bottles; measured about one gallon; arrived at the Laboratory 7th December 1870.

| Taste | Somewhat brackish |
| Reaction | Neutral. |

Sediment: Scanty; chiefly vegetable debris and carbonate-of-lime crystals.

A glance at the Analysis is sufficient to show that this water is quite unfit for drinking purposes.

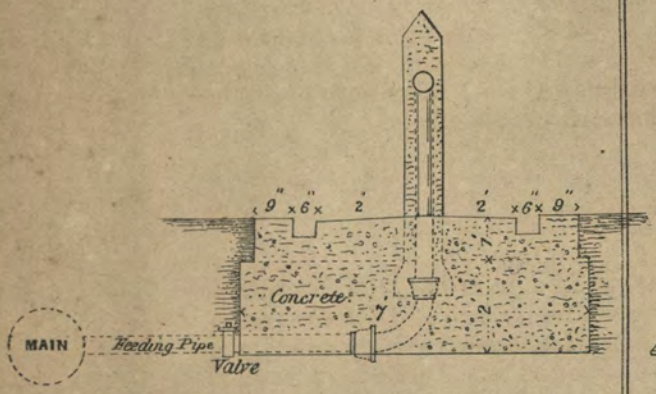
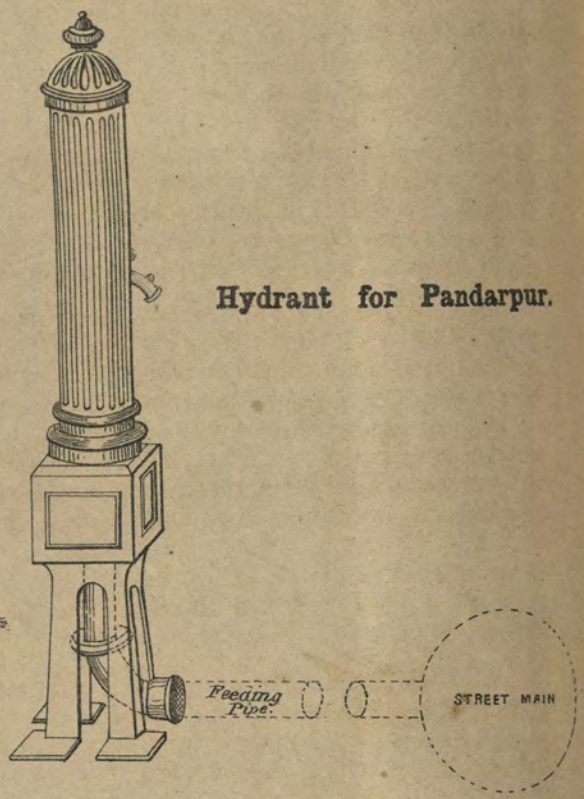
## Hydrant for Pandarpur.

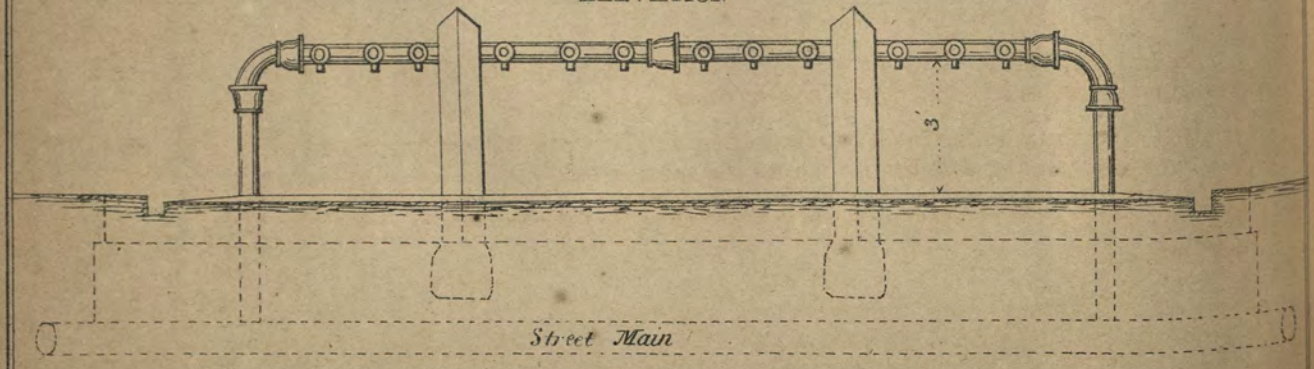
CROSS SECTION.





*Scale 1 Foot to an Inch.*

ELEVATION



*Sholapoor 29th April 1873.*

R. Rozario Lith. W. I. Press.

28. The accompanying small sketch map gives the relative positions of the Town, and the new reservoir, together with the catchment area of the latter, and the proposed addition to it. The new supply works were commenced on the 1st February 1870, and so far finished that water was admitted into the town on April 7th, 1873. The cost was Rs. 1,86,857. The Lake which has been formed has an area of 8,800,000 square feet, equal to a total capacity of 101,901,598 cubic feet. The capacity for supply is 94,786,956 cubic feet, and 7,114,642 cubic feet remain below the outlet. The supply has been calculated for 18,000 persons at the rate of 10 gallons per head per diem, for 20 consecutive months without rainfall. There is an outlet tower, and 4 inlets at different heights are protected by iron gratings. The present outlet is on the Town side of the dam, and it is about to be fitted with a new valve. Two parallel mains, earthenware 12", lead from the tower to a masonry expense reservoir, of which the cubic capacity is 24,000 feet. From the reservoir a 10" iron main runs for 250,' and then bifurcates into an 8" which encircles the Town, and a 6", which goes to Gopulpur; another 6" leads to Vital Peit, and a 4" to the east gate of the Temple, where a stand pipe is to be placed.

29. There are 18 Hydrants like that shown in the sketch, and the number will be increased as the opportunity permits. Ten are of 4 taps each, and 8 of one tap. Three of them are at Gopulpur on the main road below the temple of Kala Gopal, and one is on the road leading from the Town. The Dam valve is closed from 6 P.M. to 6 A.M. In the main street west of the Temple, an excellent supply cistern has been formed by mounting on a low stone platform 3 of the ordinary iron Tanks 4′×4′×4′. Each is connected with the other, and the centre one is fed from the street main—6"—by a syphon pipe. There are 16 taps of which 11 are turn, and 5 are Lambert's push. Ten are bedded in wood, and six in stone. The Tanks themselves are bedded in Portland cement.

30. When this Cistern was being put up, and after it had been finished even, there was a very strong feeling against it; it was wilfully damaged, and avoided as unclean, and then came the reaction. At the time of my visit, October, it was thronged by crowds who fully appreciated its benefits. Another form of hydrant was designed by Mr. Whiting, C.E., of the Irrigation Department; but for some reason or other, it was not put up. It is so infinitely superior to the ordinary stand pipes, that, when it is better known, I am quite sure it will be adopted wherever there is a pipe service. A sketch of it is given.

## Drainage and Sewerage.

31. The existing drainage is all bad; and, although it has lately been improved, it is still so faulty that nothing can be said in its favor. Of sewerage, in the strict sense of the term, there is none; but a scheme has been proposed, the estimated cost being Rs. 122,000. The calculation is for 10 gallons of sewage per head per diem from 90,000 persons on 150 acres, plus the rainfall, 30 inches It may be expressed thus—

| | | |
|---|---|---|
| 52 | million cubic feet of | sewage. |
| 16 | „ „ | rainfall. |
| 68, say 70 | | |

The time for water delivery and sewer discharge is 16 hours; so the latter would be at the rate of 3·28 cubic ft. per second.

32. For these works the Town has been divided into 12 sections, of which 9 fall to the river, and 3 to the nullah on the south west.*

* These are shown in detail in the following tabular statement.

*STATEMENT showing for* PANDHARPUR *the Sections into which the Town has been divided, together with their areas, the number of Houses, nd the Inhabitants.*

| Sections No. | Area in square feet. | No. of Houses. | Population. | | |
|---|---|---|---|---|---|
| | | | Permanent. | Increase during Jatras. | Total. |
| 1 | 2,210,000 | 1,217 | 6,083 | 30,430 | 36,513 |
| 2 | 1,545,000 | 850 | 4,252 | 21,262 | 25,514 |
| 3 | 500,000 | 275 | 1,376 | 6,881 | 8,257 |
| 4 | 245,000 | 135 | 674 | 3,372 | 4,046 |
| 5 | 187,500 | 103 | 516 | 2,580 | 3,096 |
| 6 | 417,500 | 230 | 1,150 | 5,745 | 6,895 |
| 7 | 200,000 | 110 | 550 | 2,752 | 3,302 |
| 8 | 255,000 | 140 | 619 | 3,096 | 3,715 |
| 9 | 160,000 | 89 | 440 | 2,201 | 2,641 |
| 10 | 345,000 | 150 | 950 | 4,740 | 5,690 |
| 11 | 200,000 | 110 | 551 | 2,752 | 3,303 |
| 12 | 275,000 | 131 | 757 | 3,784 | 4,541 |
| | 6,540,000 | 3,540 | 17,918 | 89,595 | 107,513 |

33. For the 9 river sections, an intercepting sewer will run along the right bank, and one for the other 3 sections will follow the nullah until near the proposed site for the new bridge, by the men's trench latrines; here it will turn, and join the main sewer, picking up on its way the drainage of all the southern quarter and suburb. The main sewer will follow the river as far as Vishnapada; and it is then proposed to take it across, by syphon, and utilize it on a bank which extends for some miles down stream. Such is an outline of the scheme which it is hoped may be submitted before the year is out.

34. The details above given were furnished by the Municipality; but they are not strictly correct when compared with the Census returns. Amplified details are subjoined, from which it will be seen that the density of population is 108·39 per acre. There are 5·5 persons per house, and 19·5 houses, of all classes, per acre. The total area is 150·14 acres. The total population is 16,275, and of these no less than 15,267 are Hindoos = 93·81 per cent. Whilst in other sects the males preponderate, there is the strange fact that, amongst the Hindoos, their percentage on the total Hindoo population is 49·18, that of females being 50·82. The proportion between males and females of all castes is as 49·35 to 50·65. The percentage of Mahomedans on the total population is 4·94, of Buddhists 1·23, of Christians 0·02. On the total population of these three sects respectively, the percentage of males and females is, for Mahomedans 51·87 and 48·18, for Buddhists 52·00 and 48·00, and for Christians 75·00 and 25·00.

## THE TEMPLE.

35. There are no less than 12 temples, each with its own idols, its attendants, and its votaries; but the worship of Vitoba is here so predominant and pre-eminent, that, applying a pronoun to an image, *his* is *par excellence* THE Temple. It has gathered around it many subordinate buildings, and all are enclosed by high walls of cut-stone masonry. I must premise that no European, as a European, has ever placed foot within either courts or buildings; so whatever is known of them has been gathered from those to whom they are open. Although they are so scrupulously closed against every other sect, to the orthodox Hindoo there is neither let nor hindrance; and in this way subordinates of the Public Works Department, and others, have so measured and described, that details even are tolerably well known.

36. Entering by the eastern gate—the *Nam Deo*—and passing the chambers of countless idols, the first place is a large paved courtyard, the *Subha Mundup*, or place of meeting. As its name implies, it was obviously meant to be the place where pilgrims were to assemble; and without a doubt it is the place of all others where they should be assembled. It is 150′ × 50′ and, except for some 20′ of its length, it has a tiled roof raised bodily on short uprights. On either side are corridors about 15′ broad, their flat roofs supported on a double row of pillars. There was a time when these corridors gave their full accommodation; but now half of their floor space is lost, for they have been divided along their length, and partitioned off into rooms for devotees and others. On the west is a colonnade, its roof supported on 12 pillars, and here is the entrance to the Solkhamb. The door has panels, jambs, and lintels of brass, and is otherwise ornamented.

37. *The Solkhamb* is so called because 16 pillars support its roof. It is a spacious room some 40′ square, but only 10′ high, and without windows. On the south side are 2 iron-barred doors and 3 perforated slabs, which serve for windows, and on the north are 3 doors and 2 slabs. The roof has been pierced for ventilation, but very inadequately; for it is about 4′ thick, and the holes which have been made—there are 7—are not more than 2′ square on top, and they diminish downwards. The second pillar on the left, beyond the brass entrance door, is called the "*Gurudkhamb*." It is covered throughout its length with silver plates, and it is a meritorious act to visit, and embrace it. In the west wall is a door profusely ornamented with silver panels, jambs, and lintels, and it leads to the Chaokhamb.

38. *The Chaokhamb* is so called because 4 pillars support its roof. It is about 20′ square and 10′ high. Its roof has been pierced in 5 places, like that of the Solkhamb. In the south wall is a door 4′ × 2′, now used as the one entrance during the Jatras, and in the north wall is a perforated slab about 18″ square. The arched doorway in the west wall is 5′ × 4′, and it leads to the antechamber.

39. *The Antechamber* is about 8′×6′×11′ high, and without windows. Its roof has been pierced in one place for ventilation, and the north and south walls are pierced by small holes about 5″ square. The door in the west wall is 5′×2′, and it leads to the Idol Chamber.

40. *The Idol Chamber* is 8′ square, and surmounted by a vaulted dome, the apex of which is about 20′ above the pavement; the pinnacle which crowns it is upwards of 60′ above the general level of the courtyard; the present ornamentation is tawdry, and is probably modern. The walls are 5′ thick, and they have been pierced with small openings, on the north 3″×2·5″, on the south 3″×3″, on the west 5″×3″. On the north is another small opening, which gives exit to the water with which the idol is washed. This water is led outside into a small stone cistern, and is used much like the holy water in Roman Catholic churches. A raised platform occupies about one-half of the floor space, and on this is THE IDOL—an ordinary one of stone, blackened by age. It is about 4′ high, and represents Vitoba standing, with hands resting on hips. He wears a high turban, and very little else. In the back ground is a silver screen with elaborate and mythological ornamentation. The pedestal is also covered in front with silver plates.

41. The roofs of the Solkhamb, the Chaokhamb, and the Antechamber are flat and continuous, and they are conterminous with those of the corridors on either side of the Subha Mundup. Admission to these terraces is accorded to Europeans, and in this way all open spaces are fully commanded. The space between the Chaokhamb and the minor temple of Maha Luxmi, on the south side, has been covered in by a tiled roof supported by wooden posts which rest on massive cross-beams running between the two temples. These beams give access to a flat roof on the north side of the smaller temple, and from this place one may see the whole of the western Court, the entrance door of the Chaokhamb, and all the arrangements for passing in the pilgrims.

### THE HISTORY OF THE TEMPLE.

42. Whilst those were yet on earth who had seen the living Christ, and before the last book had been added to the Christian Testament, the Hindoo world was wildly stirred by the report that their god Vishnu had become incarnate in a small village on the banks of the Bheema. The legend runs thus in Moor's Pantheon :—"A Brahman, named Pundelly, was travelling on a pilgrimage from the Dekhan to Benares, with his wife, father, and mother : his neglect of the two latter caused them many vexations on their journey : for he would sometimes ride with his wife, and leave them to walk. And arriving at Pandharpur, they took up their abode in a Brahman's house for the evening and night: during which Pundelly noticed, with self-abasement, many acts of filial piety and kindness on the part of his host towards his parents, who, with his wife, composed the hospitable family. Early in the morning Pundelly observed three elegant females, attired in white and richly decorated, performing the several duties of sweeping his host's house, and putting it in order, filling water, arranging the vessels for cooking, sanctifying the eating-place by plastering it with cow-dung, &c., &c.; and, astonished at the sight, he proceeded to inquire who these industrious strangers were, he not having seen over night any such persons of the family. But his inquiries were received with repulsive indignation by the beauteous damsels who forbad him, 'a *chandala*,—an ungrateful and undutiful son,' &c., to approach or converse with them. Pundelly, humbling himself, solicited to know their names, &c., and learned they were named GANGA, YAMUNA, and SARASWATI, and immediately recognised the triad of river goddesses. More and more astonished he, after prostration, inquired how it could be that such divine personages, in propitiation of whose favour he with his family, among thousands of others, undertook long and painful pilgrimages, should descend to the menial occupation he had witnessed. After reproaching him for his undutiful conduct, they replied to this effect : 'You have witnessed the filial and dutiful affection of the heads of this family to their aged and helpless parents; for them they seem solely to live, and for them they find delight in toiling; they seek no pleasure abroad, nor do they deem it necessary to make

IMAGE OF VITOBA IN THE TEMPLE AT PANDHARPUR.

R. Rozario Lith. W. I. Press.

pilgrimages, to even to go to the temples for the purposes of prayer. Know ye that these acts, necessary and holy as they may be, are nevertheless of no avail unless earlier duties have been attended to. But most especially those who neglect their first duties to their parents, to whom all first duties are owing, may pass their whole lives in pilgrimages and prayer without benefit to their souls. On the contrary, with those who are piously performing those primary duties, the outward ceremonies of religion are of secondary and inferior moment; and even deities, as you have witnessed, minister to their comforts and convenience. He who serves his parents, serves his God through them. Struck with remorse at this rebuke, Pundelly resolved amendment; and dropping his intended pilgrimage remained at Pandharpur, and for a series of years acted in an exemplary manner towards his parents, exceeding even in attention and duty the pattern of his former hosts: insomuch that Vishnu inspired him with a portion of his divinity, and he now assumed the name of VITOBA. Two wives of Vishnu, in his former *Avatara* of KRISHNA, to which indeed this approximates almost to identity, were associated with him in this, RUKMINI and SATYABHAMA. Some give VITOBA three wives, adding RADHA to the other two. RUKMINI is represented in the same position as her husband, and has a temple beside his at Pandharpur."

43. So much for the myth, and, seeing that it inculcates a principle which in almost similar words was enunciated by the Christian Saviour, we may readily admit its surpassing beauty. The first authentic accounts of the place date as far back as A.D. 83, or the 6th year of the Hindoo era Shaké. The incarnation itself belongs to a fabled past; but the date now given is that when the memory of it was revived.

44. At the time here mentioned, during the reign of the King Shalivahana a freebooter, by name Dalmaji Naik, was the terror of the country round about DINDERWAN on the banks of the Bheema. When his outrages had been reported at Court, the following order was issued by the King to Ramchundra Sudasheo Soni Oodawunt:—

"In the south, on the banks of the Bheema at the Dinderwan, there has grown a thick forest. The robber Dalmaji has made it his abode, and laid waste all the surrounding villages. You shall therefore go there, punish the rebel, and quell the rebellion. The extent of the forest is one yojan* from north to south, and from east to west. The forest shall be cleared, and the land brought under cultivation. It is the seat of the deity VITOBA, on whose account a charitable grant of 60 chahoors of land is made. Out of these 12 chahoors of jungle shall be preserved. The surrounding forest shall be cut down, and you shall cultivate and enjoy the other 48 chahoors, and serve Pandurung, the deity. The place shall be inhabited, and named Pandharpur after the name of Pandurung. You shall enjoy there all the rights and privileges of a Sir Deshmukh, Deshpanday, Patel, Panday, Patwarri, Shettia, Mahajun, Joshi, and Mhar, &c., the twelve Balutidars. You shall enjoy profits that may accrue through the piety of the people in connection with the deity Pandurung, and other deities that may be there, and employ your time in the service of the deity. You shall enjoy the proceeds of the wuttun, and of the office (of priest to the deity) as also any income that may be realised through the charity of the people. This is the grant made by the Sirkar. You shall enjoy it hereditarily. The place shall be established as the chief town of an independent district, and shall be called the holy place of Pandharpur. You shall, as above stated, live there, and worship the deity from the bottom of your heart. If any successor of ours revokes this, may his family be extinct, and may he go to Hell, with all his ancestors, as long as the sun and moon shall endure. Such a man shall be deemed guilty

*=9 miles.

of incestuous intercourse with his mother and grand-mother; therefore no one shall revoke, or try to undo what is here ordered. Everyone shall cordially assist and continue this. If he does so, he will never be degraded from his throne. This is a sure blessing."

This Sunnud is signed by the King himself, A.D. 83.

It is dated Sunday, the 7th day of the month Chaitra, Shaké 5, and is given in the Malootaran Grunth, verse 218, copied by Kasinath, disciple of Maloo, in Shaké 1219=A.D. 1297.

45. In compliance with these orders of the King, Ramchundra collected an army, and, having chosen four favourite commanders of the Kuli caste* he marched upon Dinderwan. When Dalmaji Naik, the robber, heard of this force coming against him, he fled.

* Sumbajee Adutrao.
Kamajee Mehetrao.
Dewji Abhangrao.
Namji Perchand.

46. On arrival at Dinderwan, Ramchundra first pitched his tents near the Linga of Mulkarjun. VITOBA appeared to him in person, and directed him to build a temple over this Linga. He also built a temple to Kalbairoo; prepared and set up, with all requisite ceremonies, the idol of Marootee, in the Subha Mundup, and then proceeded to build the temple of VITOBA. When this was completed (the present idol chamber, and ante-room) he commenced to build he gate-way; but in this, as well as in the completion of Mulkarjun's temple, he was interrupted, by having to go and assist the King against a Mahomedan Prince, who had risen in rebellion against King Vikram. Returning successful from this expedition, he completed his works, and also built a temple to Rukmini in the north corner of the present temple enclosure. Lands were assigned to the Kuli Commanders and others, and the nucleus of the present town was formed, and its name was now called Pandharpur.

A.D. 87.

## DAILY OBSERVANCES DURING THE JATRAS.

47. To quote Dr. Leith:—"It is a meritorious thing to visit the idol at any time, but there are days on which the worship is considered to be of more than usual virtue. The Hindoos, who observe lunar time, divide the month into two parts, and number fourteen days from the new moon; and, again beginning from full moon, another period of fourteen days. In each month there are two days devoted to VITOBA: the one is the eleventh from the new moon, and the other the eleventh from full moon; and on these days the villagers, within a distance of ten or twelve miles, come to Pandharpur to worship. There are two months in the year in which these eleventh days are more pre-eminently sacred, and in which the pilgrims from greater distances come; and the religious observances in these months last for a fortnight, or from the eleventh of the waxing to the eleventh of the waning moon. These months are *Ashar*, which falls partly, or wholly, in July; and *Kartik*, which falls partly, or wholly, in October."

48. The *first day*—Shudh X.—The pilgrims, who nearly all arrive before sunset, go at once to the temple, and make their obeisance to the image; but from the Solkhamb at a distance.—On the evening of this day, during the Ashardi Jatra only, the palanquin arrives from Alundi, with the *Padukas* of Dnaneshwar, and it is ushered in with great pomp. The *Padukas* are representations, in silver, of the feet of the saint.

49. The *second day*—Shudh XI., Ekadusee—It is on this day that the pilgrims pass through the idol chamber, and make their offerings to Vitoba. The passage through the temple will be noticed subsequently, and here it will suffice to say, that the ceremony before the idol is the following:—The pilgrim advances to the brass rod, passes under it, and stands before the idol. With a pice in his hand he performs the "Owalnee" or wave offering; he then embraces the feet, and touches them with his forehead; he then lays down another pice, and makes the best of his way out. The two pice are of course the minimum

offering, and it is at these times that large sums have been given. In the afternoon there is the Rutha ceremony, when images of VITOBA and RUKMINI are placed upon a canopied car, and taken round the Town.

The last ceremony on this day is the "Pradakshna;" it consists in circumambulating the Town, and visiting the 12 temples here named. The temple of Poondalik is the starting point.

1. Poondalik.—The Brahamn in whom Vishnubecame incarnate.
2. Chandrabaga.—The goddess of the river.
3. Datatraya.
4. Wisheshwar.
5. Mahadeo.
6. Kala Marootee.
7. Vishnoo Panchyayatan or Chowfala.
8. Ramjibawas Muth.

These 3 lie back about 100 yards from the regular route.

9. Mahadeo.—On Haridas Ghat.
10. Rama.—Built by H. H. Holkar.
11. Murlidhar.—Built by H. H. Scindia.
12. Jyandeo.

The pilgrims then wash their hands and feet, and disperse for the night. A rigorous fast is maintained throughout the whole of the Ekadusee, and the more devout will not even take water.

50. The *third day*—Shudh XII. On this day, after the usual bathing in the river and the visit to the temple, the pilgrims may partake of cooked food according to their means. Those who can afford to do so generally invite one or two Brahmans, one of them a Budwa, and Brahman women, not widows, to eat with them. After resting a while the Pradakshna is performed.

51. *The fourth and fifth days.*—Shudh XIII., XIV. There are no special ceremonies on these days, but it should be noticed that the prescribed time for performing the Owalnee is between the 2nd and 5th day—the more fortunate do it on the 2nd day. Purchases are usually made now, and great numbers of little brass cymbals are sold. They are cheaper here than elsewhere.

52. *The sixth day.*—Pornima XV. After the usual bathing in the river, and the visit to the temple, there is a general movement to Gopalpur, to the temple of Kala Gopal. Here prayers are recited, and passages enacted from the early life of Krishna, and finally a suspended pot of curds is broken and scrambled for. On this night the *Padukas* of VITOBA are carried round the Town in a palanquin, and the people believe that, when the palanquin enters the bed of the river, the goddess Chandrabaga comes to meet it, and that the waters keep rising so long as the emblems are there.

53. *The seventh day.*—Vudya I. On this day the Gopalkala ceremony is performed under the great porch of VITOBA's temple.

54. *The eighth, ninth, and tenth days.*—Vudya II., III., IV. There are no special observances beyond the bathing in the river, the visit to the temple, and the Pradakshna.

55. *The eleventh day.*—Vudya V. On this, the last day of the Jatra, the whole temple, from end to end, is thoroughly washed down with water brought by the zealous devotees; and with this ceremony the Jatra closes.

56. Such are the detailed ceremonies for the great Jatras in the months *Ashar* and *Kartik*, and it is at these times only that they extend over 11 days. In the ordinary months all is over in 3 days. As with all observances elsewhere, the extent to which they are followed is a matter of individual resolve. There are some perhaps who, without being positively negligent, are not very self

exacting, but the majority are scrupulously obedient; and to many the whole time is a time of trial, sustained by strong religious excitement. For these there is incessant prayer, and much meditation; the fasting is rigorous and prolonged; there are frequent visits to the temple, and frequent Pradakshna.

### The Temple Functionaries.

57. The duties of the temple being many and various, they are assigned to different sects, as follows:—

1. Budwas ... In charge of the idol, clothes, ornaments, and treasury.
2. Pujari ... ... Worshippers.
3. Benari... ... Preachers.
4. Paricharuk ... Water-bearers.
5. Dingri ... ... Barbers.
6. Haridas ... Singers.
7. Dange... ... Guards.
8. Diwate ... Torch-bearers.
9. Ootpat ... In charge of Radha, Satyabhama, and Rukmini.

58. Of the above the Budwas alone demand notice. They are Brahmins, but not priests. Some hundreds of years ago, four brothers of this sect came from Tellingun, and settled in a village about 8 miles from Pandharpur. They afterwards took service with the Koont Brahmans, who were then in charge of the temple, and eventually they succeeded them. It is on record, that when Babajee Koont was the chief priest, he complained to Government that Tanaji Budwa and others were trying to usurp his authority. The appeal was given in his favour and, on his death, the Government took over the temple, and farmed it out. This was in A.D. 1080, and the sum given for it was Rs. 2,000. In the following year the Budwas rented it, and since then they have ever regarded it as a vested right.

59. Now the temple was built in A.D. 84, and in A.D. 1080, as just stated, its revenues were farmed for Rs. 2,000; so here is a period of 996 years, during which the Koont Brahmins, and others must have been in possession; and as the Budwas rented it in A.D. 1081, they too must have enjoyed it for 793 years. (84 + 996 + 1 + 793=1874) Their possession was not uninterrupted, but they were only out of office for short periods.

60. The several functionaries of the temple appear to have quarrelled amongst themselves as to the proprietary right over the revenues, and on this being reported to the Government of the day, it was ordered that the treasury, jewels, ornaments, clothes, &c., &c., be attached. The order is given in the subjoined letter, and, from the Budwas' petitions, they seem to have been deprived of their privileges for at least nine years, and only recovered them after signing agreements for future good conduct:—

From

Naro Ramchunder Mantri,

To

Moro Bapujee and Naro Ram.

After compliments, dated Sur Sun Arba Maya Wa Alf, (Fusly year 1149*.) You have informed the Huzur, that in consequence of a dispute about the proprietary right over the revenues of the temple between the Garudadhwaja Benari, Dangé, and Budwas of the holy place of Pandharpur, their Wuttun having been attached by the Huzur, the al-

*1149 + 590 = A.D. 1739.

lowance assigned to the temple, together with the amount collected at the altar of the deity, has been made over to the Kamavisdar of the Punt Pradhan. This is not right. You should act according to the instructions conveyed to you in a letter from the Huzur. The amount that may have been collected since the Watan was attached, should be kept under attachment in the treasury room of the deity. The Budwas should be ordered to deliver to you the ornaments, jewels, gems, rubies, pearls, costly clothes, &c., as also the key of the treasury room. These things should be kept under attachment in the treasury room. The ornaments, &c., should be taken from the Budwas. If any objection is raised, severe measures should be adopted for getting possession of the ornaments. Do not neglect this. If anybody raises a doubt about (the safety of the things in) the treasure room, another room in the temple may be vacated, and the money, ornaments, &c., of the deity kept there. The eight officers have been from the first serving the deity, and should be allowed to do so; every one should be allowed to enjoy his rights and privileges uninterruptedly. Be this known. Dated 20th Chandra, month Rajab. This is the request.

From

SHIWAJEE SUKHDEO and OTHERS, the BUDWAS of the

HOLY PLACE of PANDHARPUR.

To

BALLAJI BAJIRAO PRADHAN.

After compliments, Jewaji Pant Khasgiwalay, who was appointed by your order as an arbitrator to inquire into our case, looked into all our former papers and prescribed five rules for our guidance; but we disobeyed those rules. Consequently new clerks and servants have been sent (by you) to supersede us; we earnestly pray that they may be recalled. We will conduct ourselves according to your orders. Formerly, in the times of the Emperors of Bijapur, we defrayed the expenses on account of *Nayewedia* (offering to the idol), *Nandadeep* (a light kept night and day before the idol) and paid whatever was due to the Sirkar and the Hakdars (other claimants). After the downfall of the Bijapur Government, we continued to do the same also in the time of the Mogul Government. Lately, since the establishment of the Native rule, we have not been paying anything. We have behaved insolently. We have been the servants of the Sirkar since a long time; the former Government took service from us, so your Highness will be pleased to do the same. In consequence of overbearing conduct, your Highness has become angry and employed other men in our place. As your Highness is not satisfied with our former agreement, we now undertake to satisfy Ramchandra Khrishna Kamavisdar, and give guarantee for our good behaviour. Your Highness will be pleased to look to our means of living, and settle the matter accordingly. We will take what will remain after defraying the expenses of *Nayewedia* (offering to the idol), and *Nandadeep* (a light kept night and day before the idol), &c. We will pay the Government the *Sherni* (a tax) and make other payments due to the Hakdars, as may be ordered, and perform the service of the Sirkar. We pray that (on these conditions) you will be pleased to remove the attachment. We will behave according to your orders. We shall not fail in this. If we fail, your Highness may do anything you please, and you may not hear the prayer of your servants again. This agreement is given in writing, dated Chandra 16th Sur Sun Arba Khamssain Maya Wa Alf, (Fusli year 1154.) Written by Shewaji Sukhdew Badwa.

1154 + 590—A.D. 1744.

SHRI

From

SHIWAJEE SUKHDEO, and OTHER BUDWAS of the HOLY PLACE of PANDHARPUR.

To

BALLAJI BAJIRAO PRADHAN.

The reason of passing this agreement is as follows :—

Jewajipunt Anna, having been appointed our arbitrator, orders were issued to him by Government to investigate our case. Accordingly, the said Anna perused our previous papers, and the Government bound us by an agreement consisting of five conditions. As we did not act according to the provisions of the agreement, we have been hitherto suspended (from the management of the temple) by Ramchandra Khrishna Kamavisdar. Therefore we went to the Sirkar, and prayed for the continuance of the office to us, and promised that we would never act without permission. The Sirkar thereupon intimated to us that on our furnishing security, giving a guarantee and a writing that we would behave according to the orders that may be issued to us, our poverty would be taken into account and the management of the temple would be made over to us. Agreeably to this intimation, we passed an agreement to the Sirkar and made it over to the said Anna. But the Sirkar was not satisfied with it. Therefore we all Mahajans enter into a fresh agreement as follows :—

From the first the Sirkar has allowed us to manage the affairs of the temple, and we spent only so much money as was assigned by Government. Latterly, after the downfall of the Bijapur Government, and on the establishment of the Mogul power, whatever was resumed by Government, we gave up and conducted the management. For the last 10 or 20 years, in consequence of disorder and confusion that prevailed, we were not called upon by any one to prove our previous agreement. Since the introduction of the rule of Maharaja (Shiwajee) we have borne ourselves imprudently, without showing any previous authority (in proof of our agreement), or without rendering any account of the clothes and ornaments (entrusted to us), and have behaved insolently as we liked. Therefore the Sirkar became displeased with us, and, having removed us from the office, has appointed its own Karkoons to conduct the duties. As to this, we beg to say that for a long time we behaved in accordance with the orders of the officer of the Sirkar. It is only of late that we have behaved disobediently. We therefore pray that the Sirkar will be pleased to re-employ us to conduct the duties as before. We shall furnish such security for our conduct as may be desired, and are ready to satisfy Government in this matter. We shall not fail in this. Out of the income the expenses on account of the deity (idol) and the share due to the Sirkar out of the offerings, and such other expenses will be paid as heretofore, and we shall keep to ourselves the sundry proceeds as before. We have got Watans at Bijapur given to us by Jamedars. The Government has seen our title deed thereof. We therefore pray that such grants may be made to us as may enable us to maintain ourselves in our reduced circumstances, and we shall pray to the deity thrice a day for the welfare of the Sirkar, and pass our life in the protection of the idol. We bind ourselves to render to the Sirkar every year an account of the ornaments and clothes. In obedience to such orders as the Sirkar may pass, we undertake to defray the expenses of the deity as before, and to live upon such proceeds as may remain after paying to the Sirkar its share, and after giving offerings (before the idol) to the manager; and thus to perform the service of Government. We promise to satisfy Ramchandra Khrishna Kamavisdar as to the safe custody of the ornaments and our proper conduct.

Henceforth we shall not disobey orders, and shall not fail to act in accordance with the terms of this agreement. If we fail in this, the Sirkar is at liberty to punish us in any way they like, and no representation should again be listened to. This agreement is passed in writing. Signed. Dated 10th Jilkad Suru Sun Arba Sursay Maya Wa Alf (Fusli year 1163). Written by Babajee Moreshwar Desh Panday Shirolker. Compared by Abajee Malhar Bowkeel in his own hand-writing.

1163+590=A.D. 1753.

(Signed) GOVIND ROWJEE NILKANT KHASGIWALI.

It will be seen that, for 91 years, the order has been evaded, that an old door be re-opened in the north wall of the Chaokhamb, and that during the Ashardi and Kartik Jatras the pilgrims are to enter by the eastern door :—

From

MADHAVARAO NARAYEN PRADHAN.

To

PARSHARAM RAMCHANDRA on behalf of CHINTO RAMCHANDRA KAMAVISDAR at the HOLY PLACE OF PANDHARPUR.

After compliments. Dated year Suru Sun Arba Sumanin Maya Wa Alf, (Fusli year 1193). As great irregularities prevail in the temple of the deity at Pandharpur, the holy place of Shri Pandurung, separate rules for putting a stop to them are sent with a servant. Therefore measures should be adopted for enforcing the rules and the Huzur be informed of this being done. Be this known. Dated Chandra 5th Jama Dellaval. As an authority (for this) the (State) seal is affixed.

CHINTO RAMCHANDRA KAMAVISDAR NISBUT (in charge) PARSHARAM RAMCHANDRA at the HOLY PLACE OF PANDHARPUR.

After compliments. Dated Suru Sun Arba Sumanin Maya Wa Alf (Fusli year 1193). As irregular practices prevail in the temple of the deity at Pandharpur, the holy place of Shri Pandurung, separate rules for putting a stop to them are sent with the bearers. Measures should be taken to enforce those rules, and the Huzur be informed of this being done. Be this known. Dated Chandra 5th Jamadilaval. As authority for this the (State) seal is affixed.

1193 + 590 = A. D. 1783.

*Rules for enforcing proper conduct in the temple of the deity at Pandharpur, the holy place of shri Pandurung.*

1. The visitors should not touch the idol; they should perform their worship, and pay their respects only by placing their foreheads on the Sinhvasun (throne).

2. In the third Mandup (Chaokhamb) in the front of the idol, there is a door on the south side; but, owing to the great crowd of pilgrims, darkness prevails there. Therefore there was an ancient door on the north side, which was closed,

and the idol of Hanmunt has been kept in that place.* This idol should be removed from that place and kept in the temple, and the door should be opened again, and a net work of stone should be fixed there with such large holes as would allow ample light and wind to enter.

3. At the time of the holy gatherings in the months of Ashar and Kartik there is a great crowd of pilgrims; and, as there is only one door to pass in and out, the men are injured and even die. Therefore, during the period of pilgrimage, visitors should enter by the eastern door, and, after visiting the idol, should pass out by the southern door. They should not go out by the eastern door, and should not enter by the southern door.

4. Outside the temple on the north there is a stone of (representing) Chokhamella, which is visited by Mhars, &c. As it is in a narrow lane, the visitors happen to touch each other. This is contrary to the religion of the Brahmans. Therefore the *Atishoodras* (Mhars, &c.) should offer their worship at the *Dipmal* (stone pillar on which lamps are lighted) or at any place within the quarters of the Mhars. The *Atishoodras* should not come near the temple, and if any one comes he should be punished.

5. At the door of the second court in front of the first Gabhara (the innermost part of the temple) the pavement inside is lower than that outside the threshold. And therefore great darkness prevails on account of the crowd of pilgrims. Therefore those who go inside receive a shock and tumble down. For this reason the inner pavement should be made as high as the outside pavement, so as to prevent any shock being felt by the pilgrims.

6. As there is great darkness in the second court in the front of the deity, the pilgrims are robbed of their things. Therefore a hole about half a square yard in size should be made to the canopy of the Mandup, and measures should be taken to prevent water during the monsoons from falling in, and to secure light at the same time.

7. Wealthy pilgrims are accompanied by Mahomedans who enter the enclosure of the temple; consequently great pollution occurs. This is improper; therefore, Mahomedans should not touch the step of Namdew, and should on no account enter (the temple). If any one comes, he should be punished and fined.

These are the (7) seven rules. Orders have been issued to Chinto Ramchandra Kamavisdar Nisbut (in charge) Parsharam Ramchandra to enforce them. Therefore measures should be taken to carry out these instructions in the presence of the servants who have been sent. Dated 5th Chandra Jamadilaval.

As an authority for this the (State) seal is affixed.

### The Pilgrims and their Worship.

62. In 1873 the Kartiki Jatra began on the night of October 31st. I was at Pandharpur from October 28th until November 8th, and during this time I visited the temple twice a day always, and sometimes oftener. I have been there at 6 A.M., at noon, and at midnight, and have seen as much of it and of its ceremonies, as a European may see; so to some extent I can speak as an eye-witness. On this occasion the pilgrims numbered about 40,000; but, at the Ashardi Jatra, in the previous July, there were from 100,000 to 125,000, and the average is perhaps 50,000. It is said that the proportion of Brahmans is only 1 per cent., and that 99 per cent. are Sudras, chiefly Kunbis. Nine-tenths of them go into the town, and are there lodged in some 2,000 houses; so the overcrowding may be imagined. In telling off the space for these lodgers each floor is supposed to be so marked off as to correspond with the cross-beams of the floor above, and this imaginary division is called a *Khun*. It varies in size, but may be taken as 8′ × 4′ × 7′ high, and as each of them is to accommodate two persons, the cubic space per head is just over 100 feet; but this even is not

secured, for more than two persons occupy them. A few go to GOPALPUR, where they put up in dhurrumsalas and tents. The place is high lying, naturally drained, and presumably dry; but it finds little favour. Apart from the distance it is bleak and lonely, and the nearest shops are those at Pandharpur. There is no firewood even, and although water is laid on to the hydrants beneath the temple of Kala Gopal, they are too far from the encamping ground; and, in preference, a questionable supply is taken from the Kasegaon nulla.

63. By the time the pilgrims reach Pandharpur their religious excitement has almost reached its climax. To some the journey has been long only, and tedious,; but to many it has been real downright hardship. Many have undergone great privation, and all are more or less travel-stained and tired. Weary and worn they reach the river, and to them its waters are sacred, guarded by a goddess, and towering above its banks is the fane of the temple in which is the god of whom, in their village homes, they have heard so much. From his earliest years the Hindoo is taught to believe in an endless number of deities, and growing with his growth is a superstition developed and fostered by those whose interest it is to maintain it. His gods are described to him as terrible and remorseless beings, who demand material offerings and propitiatory sacrifices. He is told that he must visit distant shrines, and that gifts must be offered; but when they are brought, there stands to receive them one of that class who first told him they must be presented—that class whose emissaries and accomplices are leagued together to keep the masses in blind and dependent ignorance. It is craft pitted against credulity, and what wonder that the latter is hopelessly helpless.

64. If the priests of the temple believed that VITOBA was really an incarnation of VISHNU, and that it was really a meritorious act to render him homage, they would set up the image, as of old, upon the plain, and the worship would be free. Thus it was set up here when there was only the altar and its ante-room; but now chamber has been added to chamber, and court to court, until all is a labyrinth. The idol is now so hidden that the very light is excluded, and when courts and chambers are most wanted, they are as though they were not. A few families have made themselves the medium of communication, and, except for a money payment, they refuse to the masses the god who they tell them is their saviour—and then, forsooth, they tell us they are acting up to their religious laws, and they talk of religious interference. We are told, that such and such a thing is contrary to religion; but they who tell us so are those most interested in upholding the assertion, and the people against whose religious feelings we are supposed to act know nothing about it. *Their* worship is sustained, not by inherent zeal, though of that there is plenty, but by the craft of a set who in all times, and all ages, have worked upon their ignorance and their superstitions. It is as well to distinguish between genuine religious belief and vested interests. In the City of Bombay there is a similar religion, with the same bigotry, the same intolerance; but here scruples have vanished, observances have been modified, customs have been relinquished, and ceremonials have been adapted to the circumstances by which, in advancing times, they have been surrounded. If changes have been accepted in the one place, and that place the chief town of the Presidency, it is more temporising to talk of alarming the religious belief of the people. Their belief, like their worship, is touching in its very simplicity. There is a child-like faith in all, and everything; all is accepted, unquestioned, undoubted; and the why and the wherefore are never thought of. Not yet have they begun to think, and it is as well for their priests that they have not, for when that day comes it will be a day of reckoning and retribution. All now is darkness, and his goal is reached, when blinded, breathless, and bewildered the deluded pilgrim stands face to face with the incarnation of his god.

### EXISTING ARRANGEMENTS.

65. A recognised religion demands these gatherings, and the paramount power has sanctioned them; so clearly it is a duty so to regulate them, that they

may neither be centres of disease, nor sources of danger. Had we to frame a form to meet their requirements, or had we to devise, *ab initio*, a means by which all might pass before their idol, the task would be an easy one; but the difficulty is to adopt existing means. Given a place in every way unsuited, how can it be adopted? Such is the problem. We have to—

1. Prevent overcrowding,
2. Provide ventilation,
3. Regulate ingress and egress.

For the first we merely want space, the second is a matter of calculation, and for the third there must be an organised plan.

66. To understand the existing arrangements, it will be necessary to refer to the block plan, which shows the relative positions of all buildings within the enclosing wall, to the plan showing the position of the temple area with regard to its surroundings, and to the plans showing the present and proposed routes of the pilgrims through the idol chamber. Each of these plans is here given, and the course of the pilgrims is indicated by dotted lines. The men are admitted by the door in the west wall; and when admitted, they squat in rows in the court to the west and south of the idol chamber. The first row sits as far up as the raised step leading to the front of the Chaokhamb. The women come in by Venkoba's gate on the south, and, passing in front of Mahaluxmi's temple, they occupy the court and verandah on the south side of the Solkhamb. The sexes are separated by the covered space which extends from the south side of the Chaokhamb to the north side of the adjoining temple. They are admitted by alternate batches, and, passing in by the door on the south of the Chaokhamb, they go through the arched doorway in its western wall, through the door of the idol chamber, and back by the same door and doorway into the Chaokhamb. Passing along the north side of this, they enter through the silver-bound door into the Solkhamb. Here they go to the Gurudkhamb, and leave the building by the east corner door on the north side. From this point they go to Rukmini's temple in the north corner of the enclosure, which they finally leave by the gate at that corner. The entrance door of the Chaokhamb is only $4' \times 2'$, the arched doorway in its western wall is $5' \times 4'$, and the door between the ante-room and the idol chamber is $5' \times 2'$; at each of these points there is a door-step some 8" high, and throughout the route no small inconvenience is the want of sufficient light.

67. Now, the professed object of every pilgrim coming to Pandharpur is *spurshun*. Presenting himself before the idol, he must make the Owalnee, or wave offering; he must then embrace its feet, touch them with his forehead, and give his tribute. This, too, should be done between the 11th day and the 15th; so the recognised time within which it can be performed is 5 days. If it be hinted that, the arrangements being faulty, it would be better to restrict the *spurshun*, and allow to the masses *durshun* only—that is, worship at a distance, as is done on the day of arrival—those sons of Belial, the Budwas, step in, and say their religion demands *spurshun*. An easy reply is, that, for all, *spurshun* is simply impossible; and here is the proof. The idol chamber is 8 feet square, and there are not more than 48 feet of available floor space. If on to this space we allow 30 men at one and the same time, a most liberal allowance, and let sets of 30 succeed each other every ten minutes, it will give each person just 20 seconds to be before the idol. At this rate 180 will pass per hour, or 3,600 per day of 20 hours, (the place is closed for 4 hours); so 18,000 only will have passed through during the prescribed time of 5 days, and no less than 32,000 *must* be excluded, or must content themselves with *durshun*. This too is with 50,000 pilgrims, but at the last Ashardi Jatra there were from 100,000 to 125,000.

68. It would be difficult to say when the present arrangements were introduced, but most probably they have existed from time immemorial; modified now and then when pressure was put on, but soon relapsing into the old groove. It

R. Rozario Lith. W. I. Press.

can hardly be that defects so glaring had escaped notice; but Dr. Leith seems to have been the first who made specific proposals for dealing with them. He was at Pandharpur in January 1865, and after inspecting the place very thoroughly he submitted the following suggestions regarding the temple:—

1. That the north and south walls of the ante-chamber should have door-ways opened in them, each 6′ × 2′· 5. That the south one be strongly barred, and the north one be used as the exit. That the aperture in the roof, then 5″ square, be enlarged to 2′ square.
2. That the plank door in the south wall of the Chaokhamb be replaced by one iron-barred, and that a similar one be made in the north wall opposite.
3. That the plank doors of the Solkhamb be replaced by others, open and iron-barred.
4. That during the great Jatras the entrance be by the Nam Deo, or eastern gate.

His third suggestion was adopted, and the opening in the roof was enlarged; but all else has been ignored. A plan shows his proposed route, and the chief feature in it is that the pilgrims leave the building without returning to the Chaokhamb.

69. The next record is the joint report by Colonel Bell and Dr. Pelly in March 1871. Colonel Bell was then Sanitary Commissioner, and in December 1870 he went down to Pandharpur with Dr. Pelly and myself. On this occasion I suggested that door-ways should be opened in the north and south walls of the ante-chamber: that the latter should be for entrance, and the former for exit. A plan shows this route, and it will be seen that no shorter could be devised. Colonel Bell even was forced to admit that it was the "quickest and probably best;" but he qualified this by adding "not specially urged however." It had been made under the impression, that the "quickest and best" was wanted. The porch of the Chaokhamb is a few feet above the general level, and in it is the entrance door 4′ × 2′. It was proposed to discontinue this entrance, and to construct a wooden platform, the same height as the porch pavement, with approaches from the court where the men sit, and from the corridor under which the women are massed. This platform, or staging, was to be fitted to the south side of the ante-chamber at its floor level, and at the further end of the approach for both men and women there was to be one of those patent self-locking turnstile wickets. If necessary, other wickets were to be fitted in the new door-ways of the ante-chamber. The alternate batches to be admitted would be mustered on the platform, and could thus be passed in with comparative ease. The advantages of this plan were obvious. The route was shortened, the admissions were brought under perfect control, and the facilities for ingress and egress were greatly increased. With this route neither Chaokhamb nor Solkhamb were wanted, and no provision was required for ventilating them.

70. Whatever the merits of the respective proposals nothing was done until 1872, when Colonel Finch, R.E., submitted a plan and estimate of certain alterations as called for in the accompaniment to Government Resolution in the General Department, No. 3452, dated 17th June 1872. The door in the south wall of the Chaokhamb was to be widened to 3′ 6″, and was to be open and iron-barred. In the north wall opposite a barred opening was to be made also 3′ 6″. A similar opening was to be made in the south wall of the ante-chamber, and in the north wall there was to be an exit door, with that for entrance. The amount of the estimate was only Rs. 510. The fate of this proposal may best be learnt by the following letter No. 230, dated 9th December 1872, from Hart Davies, Esq., Magistrate F.P., to the District Magistrate, Sholapur:—

"With reference to your letter No. 2360 of 1872, I have the honor to report that on my arrival at Pandharpur I assembled some of the heads of the Budwa families, and explained to them the proposal connected with the temple.

They asked to be allowed eight days in order that the matter might be discussed by a general meeting of Budwas; and, at their request, I lent them the plan of the temple sent by the Public Works Department. Subsequently, from time to time on various pretexts, such as the absence of influential Budwas, they postponed giving me a decisive answer, and the Mamlutdar was equally unfortunate in getting them to decide anything. Possibly, on your approaching visit to Pandharpur, a little pressure may have the effect of causing them to give an answer. The plan is still in their hands. The proposed arrangements will doubtless affect something in the way of purifying the air; but I should have imagined that the former plan of raising the temple roof would have been more effective. The papers are returned."

*Translation of the Statement of Budwas.*

We, the undersigned Budwas, inhabitants of Pandharpur, state:—

Mr. Hart Davies, Assistant Collector, Sholapur, having personally ordered us that we all Budwas should see and think over the plan made over to one of us, named Bhimajee Ramchandra Budwa, regarding windows ordered by Government to be opened on the south and north between the first door and arch, for the admission of additional air and light into the temple of Vitoba at Pandharpur, we state so far as concerns our shares.

The first thing we have to state is that our brothers and kindreds number about 100; all should be sent for, and statement of the whole of us. They are not present to-day. We six are six-pie shares, and state so far as our shares are concerned.

We are not willing to acquiesce in the proposal, because when formerly a correspondence has ensued as to whether the opening of windows in the said space was any how contrary to the laws of our religion, the Collector of Poona, having convened an assemblage of Shastras, was convinced of its being contrary to our religion.

*Question.*—How is it contrary to religion?

*Answer.*—Inasmuch as boring a hole to a temple is prohibited thereby.

*Question.*—By what Shastra is it prohibited? Quote the sentence and tell what you know.

*Answer.*—We do not remember it so as to repeat it. We have taken it down and can tell on reference.

*Question.*—Was not then the opening of an arch door contrary to your religion? If so, how was it you allowed it to be done?

*Answer.*—We had at the time preferred our complaint to His Excellency the Governor in Council, but being told that there was no objection in our Shastras to enlarge a hole by the Honourable Mr. Ellis, we acceded to the same. Given this 31st day of December 1872.

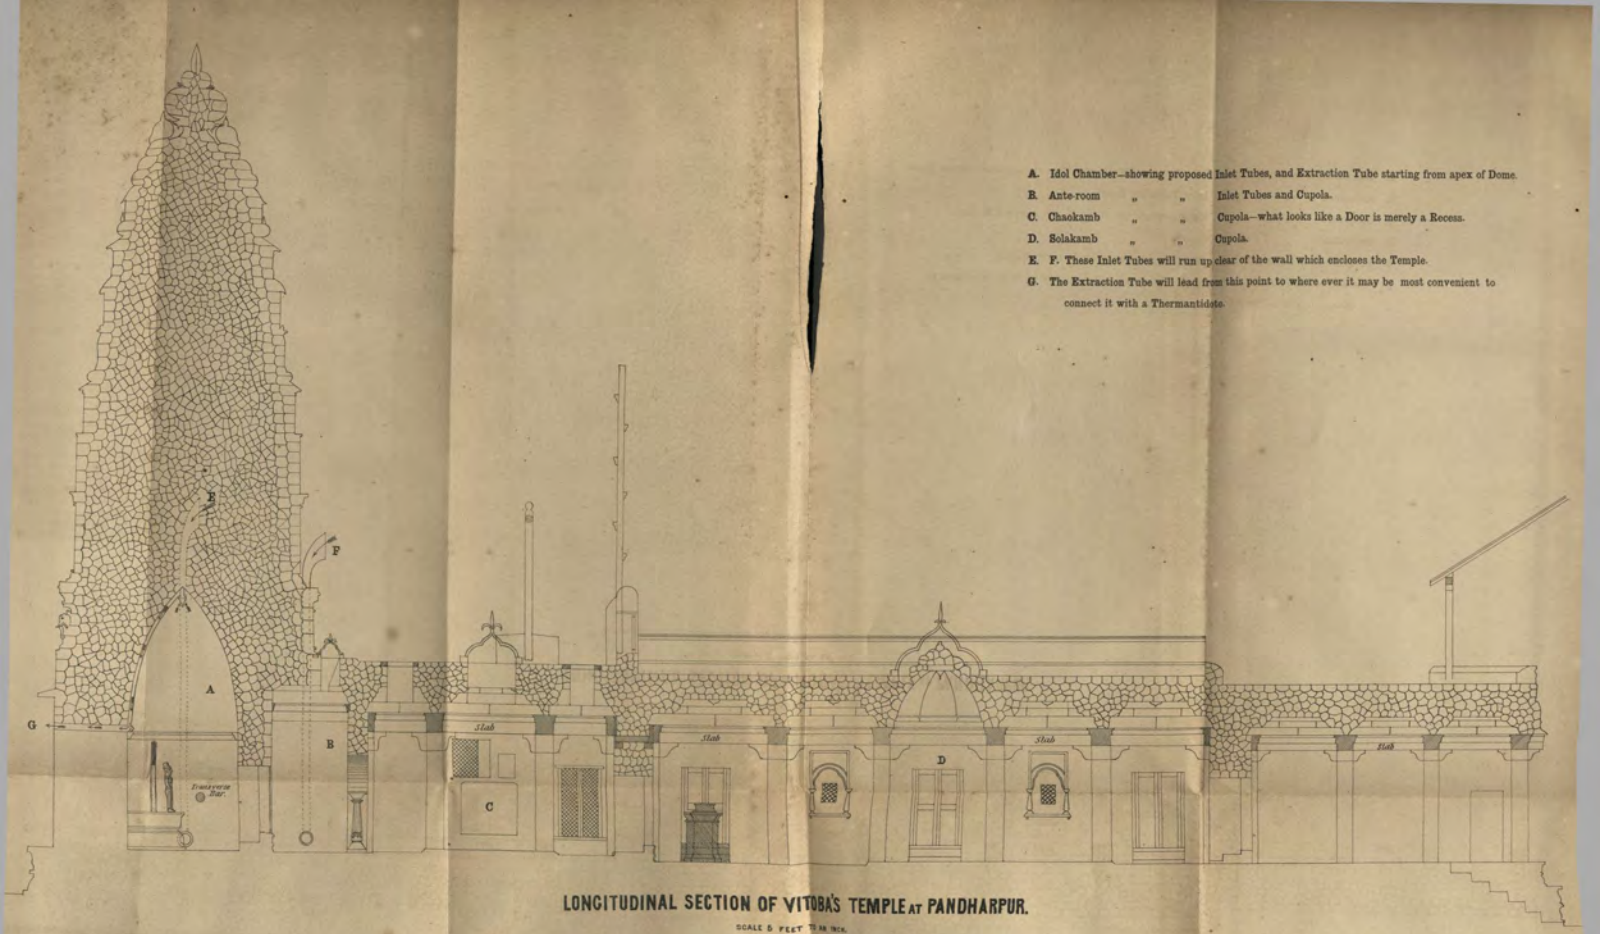
71. These answers need no answer; they carry their own condemnation. Here are wily and astute men, themselves most interested, who boldly state that the boring a hole through a temple wall is prohibited by their Shastras; but when asked by what Shastra, they cannot say. They say that the Honourable Mr. Ellis told them it was not forbidden, and that, on the strength of his so telling them, they once allowed a wall to be altered. Remembering that they came prepared to argue the case, very certain is it that had they known of any prohibitory



A. Idol Chamber—showing proposed Inlet Tubes, and Extraction Tube starting from apex of Dome.

passage, or of one that might even indirectly be so construed, they would have been ready with it. They asked for eight days to discuss the matter amongst themselves, and then they can give no other authority than a statement by Mr. Ellis. Another plea was, that opening the walls of the ante-chamber would expose the idol; but the walls are so thick, that by no possibility could any one see it, even if every bit of ante-room wall were removed; besides, if one could, it might easily be provided that those who wait shall see nothing of the interior until their turn comes. All who are there are waiting for the express purpose of seeing, and the outer wall is an effectual barrier against those who by caste are inadmissible.

PROPOSED ALTERATIONS.

72. The upshot of this refusal was that all the papers on the subject were forwarded to the Legal Remembrancer, who gave it as his opinion that the alterations suggested could be enforced by the District Magistrate, under Section 518 of the Criminal Procedure Code, Act X. of 1872. On the strength of this opinion I was ordered to go to Pandharpur, and, after consulting the Magistrate and the Executive Engineer, to state with the greatest minuteness every alteration recommended to be carried out. Nothing was to be omitted that was considered necessary, as Government considered it desirable that all improvements should be made once for all. Acting upon these instructions I went to Pandharpur, and, as previously stated, remained there from the 31st October till the 8th November during the Kartik Jatra. The District Magistrate and the Executive Engineer were both there, and we all met at the temple, meeting there by appointment the representatives of the Budwas. Every suggestion then made was fully explained on the spot, every detail even was explained, and an authorised translation of the suggestions was made and given to them. They were to discuss them at a general meeting; and, although their answer was promised to be given on the 8th November 1873, it has not been given yet.

73. The following is an outline of the alterations then proposed:—

*First.*—To provide for the better ventilation of the idol chamber, the antechamber, the Chaokhamb, and the Solkhamb.

*Second.*—To facilitate the ingress and egress of the pilgrims.

*For Ventilation.*—The openings in the west, north, and south walls of the idol and ante-chambers to be fitted with metal boxes. The aperture in the west wall to be for extraction, the others to be inlets.

From the inner end of the north and south boxes inlet tubes to run down the walls, and open about 6″ above the floor level; from the outer end the tubes to run up outside the dome to a height clear of the wall which encloses the temple, and to be fitted with kepi cowls and balance vanes, so as to face every wind.

To the inner end of the west box to be fitted a circular receiver, just behind the idol; from the outer end to start the extraction tube. This to lead to a thermantidote to be worked wherever it may be most convenient, either on the roof of the Chaokhamb or Solkhamb, or on the flat roof on the north, or on the flat roof of the west corridor, over the west gate.

A tube 10′ in height to be supported on brackets springing from the four corners of the idol chamber, and meeting in the centre. This tube to extend up the dome, and to be connected with the extraction tube. Connexions might also be made from the lamps, so as to utilize them.

In this way, when the thermantidote is worked, the impure air will be extracted at the farthest end of the idol chamber and from the dome, whilst fresh air will be admitted through the four inlet tubes, and delivered at the floor level.

The ends of all the tubes to be screened so as to guard them against birds, insects, dirt, &c.

The tubes inside the north and south walls to be flat. The perpendicular tube to be perforated if advisable. Existing openings in the present flat roofs to be retained, and to be supplemented by small cupolas ornamented and supported on 6″ pillars.

*For ingress and egress.*—The door on the south side of the Chaokhamb to be enlarged if possible, and its step to be cut down to the floor level. The step of the exit door, on the north side of the Solkhamb, also to be cut down to its floor level.

The east wall of the Solkhamb and the partition wall of the Chaokhamb to be broken through on either side of the brass and silver doors; arches to be turned if practicable.

The route for pilgrims to be marked out and preserved by railings.

74. Here, then, are the proposals, and they are so different from those previously made, that I must explain why they have been altered. In suggesting that doors should be opened out in the north and south walls of the ante-room, the enormous thickness of those walls was not known, nor, in all probability, was it known to Dr. Leith, when he proposed his door and iron-barred shutter. When it was found they were 5′ thick, the idea of breaking through them was given up as impracticable, though not impossible. Casting about for an alternative plan, the eastern route suggested itself; and, as it led through the Solkhamb and Chaokhamb, the cupolas were thought of. I may mention that, when Major Mathew's surveyors were taking the necessary measurements, it was found that, in former years, they had actually been made; so, in later years, some Goth must have built them in, and strangely enough it will be a restoration only, not a change. It was necessary to provide for the ventilation of the ante-room and the idol chamber, and here again has fortune befriended us. The walls have all been pierced, and although the apertures are small, they can be utilised on the vacuum principle. The men will now be massed in the Subha Mundup, and the entering batches can be arranged, 50 or 100 at a time, under the large verandah by the brass door. The shaded portions on the plan showing the new route, show how large an area is preserved from direct air pollution; and there will be almost a straight lead up to the idol returning on the north side. The exit will be by the first door in the Solkhamb. The railings to mark off the route can run from pillar to pillar, and they can be shifted in any direction that may be found most convenient. Women would be massed in the western courts, and their entering batches could be arranged in front of the Chaokhamb porch through which they would pass; they would leave, as they leave now, by a door common to both sexes.

### Approaches to the Temple.

75. Round about the temple are the houses of the Budwas, and the neighbourhood is now a perfect labyrinth of lanes, narrow, tortuous, and tainted. The houses vary in height from 10 to 50 feet, and the lanes are paved. Down the centre of each there is a covered drain, laid dry and square; the minor house drains lead into it. It is in these lanes that the pilgrims are so densely packed during the great Jatras. Here they sit waiting for their turn to be admitted, and the Police Inspector tells me he has known them sit for 12 and 24, and 36

# PLAN
OF

*Photozincographed Govt Office, Poona 1874.*

hours even, before getting in. Let me show what is the condition of these lanes. Commencing at the Tirthee Gate, by which Europeans are passed on to the flat roofs, and going east the length is 245′, the breadth 11′. On the left-hand side are

2 privies,
2 drains,
1 urinary;

on the right-hand side are

6 privies,
4 drains,
1 urinary.

No pilgrims wait in this lane.

Passing round by the Nam Deo Gate, and going west the lane is 408′ long and 10′ broad; here on the left are

4 drains,
1 urinary;

on the right

7 privies,
11 drains.

On the north half of the lane which passes the western gate, we come upon the pilgrims. The length is 75′, the breadth 12′, and on the left are

1 privy,
6 drains;

on the right

2 privies,
11 drains.

The pilgrims extend for 110′ farther along this lane. The chief lane on the west, leading from the main street to the temple, is 550′ long and 13′ broad; on the left are

4 privies,
14 drains;

on the right

4 privies,
13 drains.

From the south-west corner, where the women sit, the lane is 118′ long and only 2′·5 broad; there are 2 drains on the left and 2 on the right. Turning the corner, by Venkoba's Gate, and, facing south, the length is 160′, the breadth 8. In this portion on the left are

3 privies,
10 drains;

on the right

10 privies,
25 drains.

In addition there is everywhere the centre drain laid dry, and with no regular slope. Here we get a total of

39 privies,
104 drains,
3 urinaries.

76. Imagine these lanes under a sweltering sun in April, or in July, with just enough rain to wet the drains, but not enough to clear them. Take them in the burning heat of October, or in November, when the nights and early mornings are comparatively cold. Look, too, at the pilgrims: the old, the young, the infirm, the halt, the lame, *the blind*; children too, and infants at the breast, jammed and packed as closely as they can sit, creeping up gradually to the door of entrance. Can anything be more pitiable? They sit with a patience

that is perfectly marvellous ; the packing is too dense to allow of much independent movement ; but in the continued struggle, how must it fare with the very old and the very young, at night to, or with those for whom there is perpetual night ? To the occupants of the houses opening on to these lanes, it is a grevious nuisance, for ingress and egress are completely barred for hours together. And there is another evil. The more lodgers there are in them, the worse are the privies ; these all open on to the lanes, and perforce they must remain uncleaned until there is a way for the bhungy to get at them. The Police Inspector tells me that, on one occasion, he saw one of these privy traps burst, and the night-soil came out on to the lane where the pilgrims were too closely packed to get out of it. They were literally bedaubed with it without the chance of escape ; nor would they have gone had they had the chance, for the position they had gained had cost them many a long hour of patient waiting. The 10 minutes' exposure to the vitiated atmosphere in the idol chamber is bad enough ; but it is as nothing compared to this exposure continued for 10, 20, and 30 hours. It is here that a vigorous reform is needed. The filthy condition of these lanes is one of the strongest arguments in favour of the approach being by the eastern gate. Women might be passed through them to the western door, and if need be to Venkoba's Gate; but on no account should they be allowed to sit in them as they do now. In the south and west courts and corridors there is room for them by hundreds ; so there is really no necessity for their being cooped up in the lanes.

The eastern approach, by the Nam Deo Gate, is in every way better suited for the purpose. The clear length is 750 feet, and the mean breadth is 20 feet. There are four natural divisions as follows :—

1. Nam Deo Gate to 1st corner ...194′ × 22′
2. From corner to Main Gate ....192′ × 18′
3. From Main Gate to Chowkey ...139′ × 24′
4. From Chowkey to Ghat .....225′ × 18′

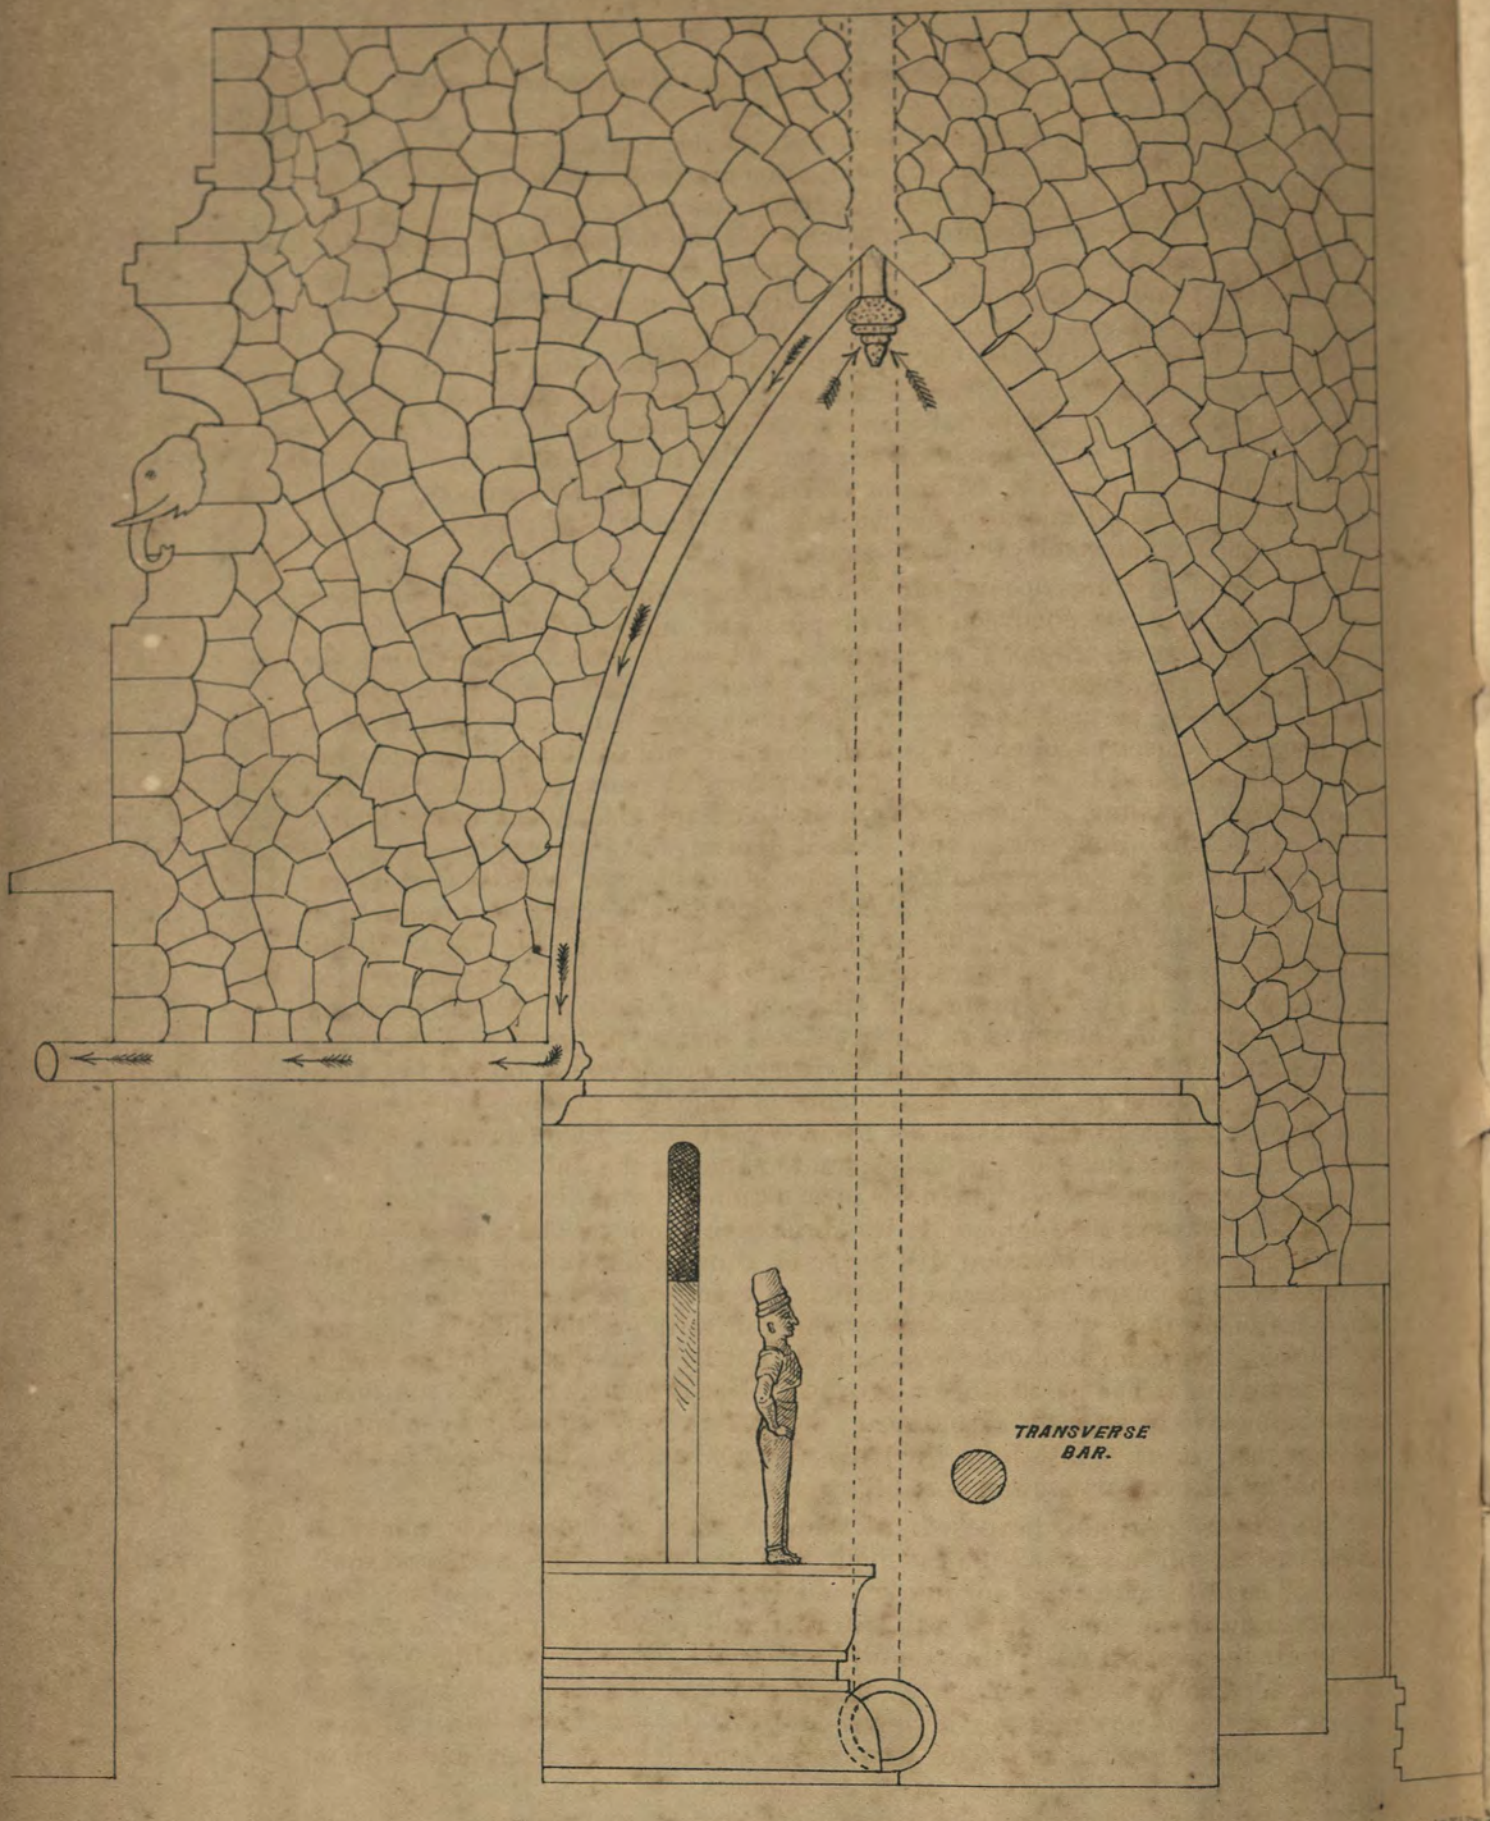
The Ghat is 36′ broad, and at the 27th step from the bottom there is a urinary ; here it is somewhat narrower, but rows of 5 in each might be continued from the top step right up to the Nam Deo Gate.

77. Barriers would be required, and their positions might safely be left to the Police ; but I would strongly urge that at one point of the route, both for men and women, there should be a tell-tale wicket, a patent one which registers the numbers passing through it. With this one would get the actual numbers and the proportion between the sexes. There can be nothing extraordinary in proposing to appropriate the Subha Mundup for the one great object of the Jatra. It is much used, but as a sort of lounge ; and all that goes on there might just as well be performed anywhere else. There is nothing more serious than this. Some poor old devotee reads to a few people, or two or more with peacock feather head-dresses stand in a row and sing. Their audience hang them with garlands, and feed them, at distressingly short intervals, with sweetmeats, or smear their faces with oil ; they the while droning their verses or chanting feebly, or dancing more feebly, and smiling vacantly. The endurance of these men is something wonderful, and so too must be their capacity. One of them whom I saw at the foot of a pillar at 7 o'clock in the morning was still there at 6 P.M ; he was still reading, still smiling, still being fed, still being smeared.

### Ventilation of the Idol Chamber.

78. Standing upon the flat roofs of the Gabharas, there is at once perceptible that peculiarly offensive and sickening smell, which so surely tells of atmospheric vitiation. On the Chaokhamb it is bad enough, over the ante-room it is worse, and in the Idol Chamber it must be something horrible. Of that chamber the capacity is only some 915 cubic feet, and 93 must be deducted on account of the Idol and the bodies of 30 persons ; so the available space is 822 feet, just 27·4 per head. In this space, for days together, and for 20 consecutive hours per day, there are never less than 30 persons. The temperature is about 90° Fahr.

SKETCH BY NATIVE ARTIST OF THE OUTRAGE AT PANDHARPUR
DURING THE ASHARDI JUTRA IN JULY 1873,
WHEN THE IMAGE OF VITOBA WAS KNOCKED OVER AND BROKEN.



IDOL CHAMBER IN VITOBA'S TEMPLE AT PANDHARPUR,
SHOWING EXTRACTION TUBE FOR VENTILATION.

Great flaring lights burn night and day; and, besides the doorway, which is always crowded, the only openings for ventilation are those given in para 40. One 5″×5″, another 3″×3″, and a third 3″×2″·5. Assuming that, when the Temple is opened, the atmosphere of the chamber has the normal amount of *carbonic acid* (·4 per 1,000 volumes); and bearing in mind, that when the ratio is more than one per 1,000 the air is foul and offensive, the condition at closing is almost incredible. Here, in a cubic space of 822 feet, *carbonic acid* has, for 20 consecutive hours, been respired at the rate of 18 feet per hour; nothing short of steam power could have established an intake; so practically the air cannot have been changed and, with the initial quantity, it must contain 402 feet of carbonic acid—402 feet out of 822—nearly 50 per cent. But there is yet another impurity—the organic matter, and its effects are terrible; nor is it so easily got rid of, for it is molecular, and sticks to everything. As Dr. Wilson puts it, it hangs about a room like the smell of tobacco-smoke.

79. With existing openings it is almost impossible to maintain anything approaching the initial condition; and proposals to enlarge them are met by the created difficulty of religious interference. There is the assertion, that the altering, or, as they phrase it, the boring a hole in the wall of the Temple, or of its ante-chamber, is prohibited by religion; but there is the fact that, in 1865, the Budwàs themselves altered the ante-chamber wall of Rukmini Temple, not 100 feet distant; and there is the fact that, for 12 years, the Idol itself was removed from its altar. There are records which tell that it was in the houses of Bapoo Mahadeo Borgamker, and Praladh Badwa, for 5 and 10 years respectively; and there is mention in the Bhanoodas Abhanga (verses) that it was removed by Anagondika Ramraja. Another record tells that it was removed in Shaké 1621 (A.D. 1699) and brought back in Shaké 1633 (A.D. 1711). In all probability this period of 12 years relates to the time when Aurungzib invaded the Deccan in A.D. 1683. From this time until his death at Ahmadnagar on 13th February 1707, there was nothing but war and disturbance, and the restoration was in 1711. For this period obviously there were no Jatras, for there was nothing to worship; so here is evidence of religious pliancy; here is proof, that they can adapt to circumstances their worship and their ceremonies; and in our own time we find them equally pliant. During the July Jatra of 1873 a Byragee (a worshipper of Vishnu in his incarnation of Rama) in a fit of iconoclastic zeal knocked over the Idol, and it was broken off above the ankles. What really happened on that occasion will never be known; but rumour says, that the Byragee made the usual offering of fruit, or sweetmeat, and seeing it was not eaten, his simple faith was shaken, and pushing or striking the Idol it fell and was broken. Now, an Idol once broken must not be worshipped; and so well is this known, that it has passed into a proverb. But evidently this was too lucrative a business to be so easily abandoned; so matters were squared by a solemn decision that, in this instance, the rule did not apply. The scene has been sketched by a native artist, and it is here given.

80. In the plan now proposed, neither the walls of the Temple, nor of its ante-chamber, will in any way be touched. The apertures in the north and south walls will be fitted with tubes for intake, and the extraction tube, starting from the ornament at the apex of the vaulted roof, will pass out through the present aperture in the western wall; thus no air can remain *above* the starting point of extraction. The rate of extraction is entirely a matter of calculation, to be regulated by the size and power of the thermantidote. At the very low rate of 1·47 cubic foot per second the whole of the air would be changed every hour, and without any difficulty it might be changed every 10 minutes.

## RECOMMENDATIONS.

These can best be made under the several heads to which they apply; and if approved, they might be adopted piecemeal, as funds permit. It is hoped they may not be lost sight of, and that no opportunity for adopting them may ever be allowed to pass:—

## Water Supply.

1. The catchment area of the lake should be enlarged as proposed by Mr. Burke, C.E.

2. An *iron* main should replace the present 12″ glazed earthenware pipes between the tower and the expense reservoir.

3. Measures should be taken to provide an alternative connexion between the tower and the town, other than that through the expense reservoir; so that, if at any time the reservoir were closed, the supply for the town might not be stopped.

4. The benefits of the water-supply might be advantageously extended by putting up *Whiting's* hydrants in suitable places, as funds permit.*

5. Supply troughs should be set up at those places where cattle are to be picketted, and for access to these a fee might be charged.

6. Two of *Whiting's* hydrants should be put up at Gopalpur, one where the water level cuts a line from the hospital to the Kasegaon nulla, and the other midway between this point and the hydrants near the temple of Kala Gopal. Eventually others might come in between, and another might replace those already *in situ*. One would be most serviceable near the proposed bridge.

7. The circuits of hydrants and troughs should be paved, and the drip utilised in the drains.

## Drainage and Sewerage.

8. The scheme which it is hoped will soon be introduced is full of promise, and there should be adopted the plan of house drainage so successfully introduced by Mr. Walton, C.E., in the Sonapore district of the City of Bombay. *Direct house connexions should be absolutely prohibited.* Existing gutters should be filled in. An important point is that, when once this new scheme has been carried out, skilled labour and supervision *must* be maintained.

## Lodging Houses, &c.

9. Whenever new houses are built, or whenever old ones are re-built, the Municipality should insist upon compliance with the ordinary rules of construction. Those of the larger and better sort, which are meant for *Lodging Houses*, should no longer be allowed to evade the rules already laid down, but not adopted. After each successive Jatra there comes the usual report, that the *Lodging Houses* were visited, &c., &c.; but figures prove the fact, that the overcrowding must be very great. The regulation of these houses presents no difficulties that cannot be met; and it is an easy matter to determine beforehand, and to register, the numbers for each floor. Let the house number, the room number, and the allotted occupation number be duly registered in the books of the Municipality.

Space for pilgrims.

10. It has been suggested by Colonel Bell, R.E., that the minimum floor space per adult should be 40 feet, and the cubic space 648 feet. This is the minimum allowance for Native Prisoners, and it presupposes the provision of good ventilation.

## Conservancy.

Surface refuse.

11. The surface conservancy requirements of the place are not very formidable. The starting point is the individual house with its enclosure; so at once there is required co-operation. The surface refuse from private premises should be taken to certain places from which it can again be removed by the public carts; and, if no places are set apart, it will be much better to throw out all such refuse on to the public street, from

* See para. 30, and sketch.

which it *must* be removed. Anything is better than to let it lie *within* houses and courtyards. The Municipal carts for removal are very inferior, and should be replaced by others, more substantial and of a better pattern. Where pack animals are used, and the narrow lanes require that they must be used, they should carry good baskets in which the refuse can be packed. At present they carry it away anyhow, and it drops all over the place.

Carts.

Pack animals.

12. All the refuse collected should be taken to two selected points, one on the north, the other on the south, and there, all that can be burnt, should be burnt. The ashes, &c., can be used to reclaim broken ground on what is really a limitless outlying waste. Until the value of the refuse is appreciated, it might be offered to gardeners, tile-makers and others, (to anyone who would consume it,) at a mere nominial charge.

Disposal.

## Night Soil Disposal.

13. By the census returns the total population is 16,275 persons, and the number per house is 5·5. There are 583 private privies served by Municipal Halalcores; so, at this rate, 3,207 persons are provided with privy accommodation, whilst 13,068 are without it. If for each of these 3,207 persons we allow 2·5 ounces of fœces as the amount collected daily (more will probably be voided, but this is a fair rate for collection,) there would be

$$\left.\begin{array}{r} 3{,}207 \times 2{\cdot}5 = 8{,}017{\cdot}5 \text{ ozs.} \\ 501{\cdot}1 \text{ lbs.} \end{array}\right\} \text{fœces per diem.}$$

In the same way, allowing 40 ounces of urine, there would be

$$\left.\begin{array}{r} 3{,}207 \times 40 = 128{,}280{\cdot}0 \text{ ozs.} \\ 8{,}017{\cdot}0 \text{ lbs.} \\ 3{\cdot}6 \text{ tons.} \end{array}\right\} \text{urine voided daily.}$$

This is the amount *voided* daily, and it is only given here to show how great is the soakage, for at least $\frac{4}{5}$ths may be rejected, as voided to waste, against walls, on the ground, in gutters, &c.

$$\left.\begin{array}{r} \frac{4}{5} \text{ soakage} = 102{,}624{\cdot}0 \text{ ozs.} \\ 6{,}410{\cdot}0 \text{ lbs.} \\ 2{\cdot}9 \text{ tons.} \end{array}\right\} \text{voided to waste daily.}$$

$$\left.\begin{array}{r} \frac{1}{5} \text{ in privies} = 25{,}625{\cdot}0 \text{ ozs.} \\ 1{,}603{\cdot}5 \text{ lbs.} \end{array}\right\} \text{passes off by drains, or soaks in.}$$

Practically there is very little more to be provided for than the 501·1 lbs. assumed to be collected daily, and this small amount might easily be disposed of in the present trenches, where it would be far less objectionable, if well covered, than in the rocky pits on the Kasegaon road, where it is not covered. Special trenches might be dug for it; and we have it on evidence that, when the ordinary trenches are reopened, the dug out earth is inoffensive. No small advantage would be that the bunghies might themselves work upon these points as centres, and carts would hardly be wanted. With all deference to Colonel Bell and Dr. Pelly, I am still of opinion that the pits should be "*deep*," say 5′×5′. In Dr. Leith's recommendations (No. 12) he advocates "*narrow deep trenches.*"

14. For the 13,068 persons who are now without privy accommodation, there must still be trenches; and, taking the same rates, there would be

$$\begin{array}{r} 13{,}068 \times 2{\cdot}5 = 2{,}041{\cdot}9 \text{ lbs. fœces.} \\ \text{,,} \quad \times 8{\cdot}0 = 6{,}534{\cdot}0 \text{ ,, urine.} \\ \hline 8{,}575{\cdot}9, \text{ say } 1{,}000 \text{ lbs. per diem.} \end{array}$$

For this amount there are the 3 different sites; and, with the most ordinary management, there ought not to be the slightest difficulty.

15. The present trenches are very faulty, and a first measure should be the removal of the huge embankments. In place of these there should be milk-bush hedges, trimmed up for a clear 6 inches above the ground, so as to allow the wind to blow freely over it. If the trenches be properly made and properly used, they might be much curtailed in their numbers and length.

Existing Trenches.

16. When the new drainage and sewerage scheme is carried out, no more trenches will be required for the *permanent* residents; and the construction of latrines for water carriage will then have to be considered.

17. It remains to be seen how far the scheme will be able to provide for the increased numbers who crowd in at the Jatras; but whether the trenches are for many or for a few, the principle is the same, and all that is wanted is increased care and increased supervision, with proportionate labor.

Trench Latrines for the Pilgrims.

## Gopalpur Camp.

18. Until such time as there are increased facilities for procuring supplies, wood, and water, it is impossible to hope that the present ground will ever be largely occupied. There are some 86 acres; but I doubt whether, under any circumstances, more than 20,000 persons would be found here. As funds permit, there should be an extension of dhurrumsala accommodation. As suggested by Colonel Bell, "simple open double-tiled sheds, with one central and two outer rows of good masonry or brick pillars on a low (1′) plinth, and with a floor of rammed clay. Thin curtain walls about 8′ in height might be provided, closing each end of each Pendall and connecting continuously the central line of pillars." Colonel Bell's proposed "water service by pipe" is impossible, from want of head; but the extension may be made as suggested above. (*See* suggestion 6).

Pendalls.

Water supply.

## The Temple.

### *Outside arrangements.*

19. The present plan of massing the pilgrims in the lanes should be *prohibited*. The men should now collect below the Ghat by Scindia's Temple, and be arranged in rows from the lowest step right up to the Nam Deo Gate. From the Subha Mundup the entering batches should be arranged under the great corridor by the brass door, and the flight of steps here should be cleared of recent obstructions, and continued from south to north across the Court.

Men.

20. The women should be massed in the western and southern courts, and should only be passed through the lanes leading to the western and southern entrances. The batches should be arranged by fifties under the covered space in front of the Chaokhamb porch.

Women.

21. In the Courts for both sexes it must happen that many want to leave for natural purposes, but cannot get away. There is much fouling in consequence, and provision should be made for this. When the Temple is closed for 4 hours, the courts should be cleared, and thoroughly cleaned. The urinaries too should be carefully looked after.

Cleaning the Courts.

22. The outside lights at the Chaokhamb Porch, and those for the Subha Mundup should be Railway platform lamps; in fact, wherever lights are wanted, these lamps should be used. They would give far more light with less expenditure of oil.

Lights.

23. The position of barriers can best be left to the District Superintendent of Police, and moveable tell-tale wickets should be placed wherever they may be found most convenient.

Barriers and registering wickets.

*Inside arrangements.*

24. Every door and window should remain open from the commencement of the Jatra to its close, and every door-step should be cut down to the floor level. The bar in front of the Idol should be removed. It was put up to check the rush, but with organised arrangements there can be no rush; so it is not wanted. The lights on either side of the Idol should be platform lamps, and they should be connected with the extraction tube.

82. In making recommendations, it is impossible to notice all subordinate points; so it will suffice to say, that a constant attention should be paid to surface conservancy, drainage and sewerage, and water-supply; to disposal of night-soil and the trench latrines; to offensive trades, to burial and burning grounds, to supplies generally, and to the thousand and one wants that are increasing daily.

83. And now, with regard to these recommendations, I trust it will be pardoned me if I point out, that upwards of 9 years ago Dr. Leith made his, and more than 3 years have passed since Colonel Bell and Dr. Pelly made theirs. Only last November the Budwas assured me they were ready and willing to do all and everything. They are profuse with promises, but somehow or other nothing is done, nor will they do anything except under compulsion.

84. Statements of Municipal Revenue and Expenditure are appended.

85. I cannot close this report without bringing to the notice of Government the very valuable assistance I received from Mr. Gungnadhur Venaik Mehendaley, the Supervisor in charge of the water works; and I venture to ask, that an acknowledgment of it may be conveyed to him.

## REPORT ON THE VILLAGE OF ALANDI, AND ITS JATRA.

86. Alandi is a small village on the left bank of the Indrayani river, in the Khed Taluka of the Poona Collectorate; and it would escape notice, were it not a centre of pilgrimage in unwelcome proximity to the largest military station in the Presidency. It is some 13 miles north of Poona. It contains 290 houses, and its population of 1,660 is made up of 840 males and 820 females. There are 5·72 persons per house. In the time of the Peishwa its revenues, amounting to Rs. 1,360, were assigned for the maintenance of the Samahda, or Tomb, of Shri Dnyaneshwar, a saint who died and was buried here in A.D. 1296. By H.H. Scindia there were also given for the same object the revenues of the village of Nanaj in the Nasik Collectorate.

87. The legend of the saint is, that many years ago a Deshust Brahman, by name Vitoba, lived at the village of Apegaum on the Godavery near Nasik. In travelling to different holy places he came to Alkapoor, now called ALANDI. Here he was hospitably entertained by a Koolkurnee named Shidopunt, who gave him his daughter Rukmini in marriage. Very soon after the ceremony Vitoba started off for Benares, where he became an ascetic (Sunyasee). When Shidopunt heard of this he recalled him to ALANDI, and admitted him to the Grahasthashram—the second stage of life. The villagers, seeing that he had returned to ordinary domestic affairs, excommunicated him; and, on this account, he with his four children left the place and went to Paitan, where the Brahmans, having heard his appeal, and noting what they considered were supernatural qualities in the children, re-admitted them all into caste. The children were NIVRATINATH, DNYANDEO, and SOPANDEO, and one daughter MUKTABAE. These all returned to ALANDI, and settled there. None of them married, but they passed holy lives, and were celebrated far and near for their great sanctity. Many stories are told of them, more especially of Dnyandeo. Of him it is related how, on one occasion, he was lying on a wall just outside of the village, when it was reported to him

that the renowned saint CHANGDEO was coming to see him. Hearing this, and having no horse, he ordered the wall to move with him; and, carried thus, he advanced to meet the saint, who was riding on a tiger, and who on seeing the miracle dismounted and embraced his brother saint. In the course of two years Dnyandeo, his two brothers, and his sister died at ALANDI, and he was buried there in Shaké 1218 = A.D. 1296. His tomb is a famous shrine, nor is the wall neglected that served him as a horse. There is merit in visiting the tomb at any time, but more especially during November—the Kartik Wadya Ekadusee.

88. The Tomb of the Saint is in the centre of a vaulted chamber about 8′ × 8′. The entrance is from the north. In a recess in the south wall are images of Vitoba and Rukmini; on the east a small window about 2′ × 2′ opens into the Shejghur, or sleeping room of the God. A pipe leads through the western wall, and carries out to a stone cistern the water used in washing down the Tomb. The ante-room is about 14′ × 14′, and the arched doorway in its northern wall is 6′ high, and 4′ 5″ wide. The exit by the eastern wall is through a doorway 2′ broad and 3′ 8″ high; it leads to a Subha Mundup. To the north of the ante-room is another Subha Mundup; and a third is on the east. They are all of them open at the sides, and covered in. On the east of this third is the tomb of Kasinath Bawa; and on the west of Dnyaneshwar's Tomb is Mahadeo's temple. All these buildings are enclosed by high walls of cut-stone, and the corridors are partitioned off, and occupied by devotees and others.

89. Pilgrims are not admitted into the Tomb, but they perform *Durshun* from the threshold of the Chamber. They are further enjoined to bathe in the river, and do Pradakshana. The Temples, &c., to be visited are :—

1. The Temple of Poondlik, in the bed of the river.
2. The wall that served Dnyaneshwar as a horse.
3. The Temple of Bahiroba.
4. The Temple of Marootee.

There are 3 others in the village : one of Malappa, another of Ram, and the third of Vishnu.

90. The revenues of the Temple are something over Rs. 2,000, and they are collected by the Gooroos, who are here what the Budwas are at Pandharpur. With their families they number about 100, and they have 21 houses. The average number of pilgrims is from 20,000 to 25,000.

91. In 1869 the place was made a Municipal Town, and there has since been levied from the pilgrims a capitation tax of 2 annas per head. Municipal revenue and expenditure are shown in the appended Tables A and B. The camping ground for pilgrims is on the outskirts of the village, and its natural drainage is good. The cattle are picketted with their owners. There are trench latrines at three different points; but they are avoided. Two halalcores are engaged permanently, and during the Jatras two others are employed together with ten scavengers; and twenty asses are used for carrying away whatever is swept up. At this time too the Mamlutdar and Chief Constable of Khed Taluka are present, and the Police Inspector and Mamlutdar of Haveli Taluka, and a general supervision is maintained.

92. Although the pilgrims do not pass through the principal chamber, it would be much improved could its wall be pierced and a perforated slab let in: the larger the better. The doorway in the east wall of the ante-room is only 3′ 8″ high and 2′ broad; so I need hardly urge its being enlarged.

# SECTION VI.

## SANITARY PROGRESS.

# SECTION VI.

## SANITARY PROGRESS.

---

By Government Resolution in the Military Department No. 604, dated 3rd February 1872, it was ruled that the Cantonment Committee Reports shall, for the future, be embodied in the Annual Report from this Office.

It will be seen that there are 27 of these reports, and they give information upon the following points :—

1. Health of the Corps forming the Garrison.
2. Drainage within the Cantonment.
3. Water supply.
4. Accommodation for the Troops.
5. Conservancy.
6. Cleanliness of the Station.
7. Quality of Rations supplied to Troops.
8. Other defects.
9. Measures adopted for improving sanitation.
10. Suggestions for remedying existing defects.

The reports are given verbatim and there is appended to each the "Remarks by the Quarter Master General by order of H. E. the Commander-in-Chief."

Under this section there is given a list of works, &c., connected with the accommodation, health, or comfort of the Troops. General Orders, too, and Circulars are also given, together with the Statement of Annual Reliefs.

For the civil population there is an equally active supervision, but the great want is want of funds. Extensive works for irrigation and water-supply are in progress at various places—more especially at Kurruckwasla near Poona, and at Pandharpur.

# SANITARY REPORT OF ADEN FOR 1873.

## Section I.—Health of the Corps forming the Garrison.

The health of the Troops generally has been good. The European Regiment has especially been exempt from sickness, excepting cases of fever really contracted in India, and during December when a field force was in the interior.

The 2nd N. I. Regiment has been remarkably healthy: the admissions to hospital in Poona in 1872 were 1,020, in Aden during 1873 only 672. The chief diseases have been scurvy and ague, the latter contracted whilst the above-mentioned force was out. At Steamer Point the state of health of the Troops was indifferent for the first six months of the year. Since then it has been good. The chief diseases were hepatitis, including abscess of the liver and ague (imported).

At the Isthmus position the health of the Troops located there has been good. Generally speaking, the state of health of the men of the Aden Troop has not been so good as that of the rest of the Troops. The health of the European and Native community inhabiting the station has been good throughout the year.

## Section II. (*a.*)—Drainage within the Cantonment.

There is no system of drainage in Aden.

A heavy fall of rain, which occurs at long intervals serves, it may be said, to cleanse the settlement: at such times the water rapidly finds its way over the surface and by natural channels to the sea. There are no jheels or marshes in the vicinity.

## Section II. (*b*)—Water Supply.

The water-supply in Aden has always been a difficulty; many opinions exist both as to the quality of the water now supplied, and also the advisability of endeavouring to provide sources of supply other than those available at present.

The quantity of water supplied to the Troops is limited, but there is no reason to suppose a greater quantity is required. In the crater, where the largest body of Troops is located, tank water is, when obtainable, issued. This water has been pronounced, by the Chemical Analyzer to Government, to be of good quality; and as such is proved by the fact that no sickness, such as diarrhœa or dysentery, is induced by the use of it.

At the Isthmus position and at Steamer Point condensed water only is issued. As a matter of economy this water is pure when newly made, but it is deficient in the essential salts.

The condensed water is free from contamination, being stored in iron and also large masonry tanks. The water in the Sawela tanks is also free from contaminating influences, the tanks being carefully cleaned and guarded.

## Section II. (*c.*)—Accommodation for the Troops.

The accommodation for Troops is generally good, and there is no overcrowding. The Store Lascars lines are very bad. The camp and sanitarium hospital for British Troops, and also the Native Military general hospital in camp are unsuitable for the purposes for which they are used. A hospital is much needed at Khormuksa for the Aden troop.

## Section II. (*d.*)—Conservancy.

The system of conservancy adopted in the latrines and urinaries is fairly satisfactory.

Night-soil is buried in pits, and liquid sewage is thrown into the sea at suitable places.

None of the native population except followers reside in military limits, with the exception of those in the small bazar of 20 houses, called the Dasvie Bazar. Most of the persons in this bazar use the Turkish privy, which is for the Sappers and Miners. A remark (No. 3) on this point will be found under Section III.

None of the cantonment land is manured or cultivated.

## Section II. (*e.*)—Cleanliness of the Station.

The station generally is clean, and more especially so within the limits of the barracks of European Troops. The entertainment of a conservancy havildar and 2 peons has had an useful effect in checking nuisances, a source of trouble in Aden, owing to the large floating population of semi-savages.

There is but one small bazar within military limits, consisting of a single row of 20 houses, and this is clean.

Private compounds are generally clean.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations supplied to the Troops have been good. A daily potato ration is issued to Europeans, and Natives have plenty of bajee and kokum.

There has been no unusual deviation in the market price of the food of the population generally, but during the months of June, July, August, and September meat is scarce and dear, owing to communication with the African coast being cut off during the S. W. monsoon.

SECTION II. (*g.*)—OTHER DEFECTS.

The position of the latrines of the Native Infantry is not good; but, owing to confined space in the crater, there is no remedy.

The Turkish privy for the Sappers and Miners requires to be closed. A recommendation for the erection of three other latrines has been made, and sanction obtained for one of these at the Isthmus. This is much needed.

There are no urinaries whatever for the Sappers and Miners, who consequently resort to the open maidan, which is quite public.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

1. A new latrine has been built for the European Regiment in the crater.

2 Another has been sanctioned at the Isthmus position for followers.

3. Two more latrines, one in front of the Dasvie Bazar, and the other on Rasmorbut, at Steamer Point, have been projected and sanction applied for.

4. The closing of the Turkish privy has been recommended.

5. A small moveable latrine of corrugated iron has been placed near the road leading from the main pass to the Malla by the civil authorities, and this has the effect of checking nuisances within military limits.

6. The Government Bakery in the crater has been completed, and it is hoped will soon be working.

7. Increased accommodation has been provided for the families of the Native Artillery and new quarters built for the Gun Lascars.

8. A scheme for storing a larger quantity of condensed water than at present available in case of an emergency, has been devised, and is now before Government.

9. Small latrines have been erected for the Officers of the N. I. Regiment in their lines. Cook-houses for a portion of the regiment in camp have been built.

10. The cooking accommodation of the Native Artillery at Steamer Point has been increased from 3 to 6 rooms, and is now ample.

11. Plan and estimate for new Store Lascars lines are under consideration.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II.* (*c.*)—*Store Lascars' Lines very bad.*

Plans and estimates, the latter amounting to Rs. 11,731, for building new lines for the Lascars, were submitted to Government, and sanctioned in September last; but the Superintending Engineer subsequently brought to notice that the description of roofing provided for had previously been condemned, and recommended a superior kind, involving an additional expenditure of Rs. 6,367, which Government refused to sanction, remarking, however, that any proposal to improve the style of roofing without increasing the expense to such a great extent might be submitted. The matter is now under consideration.

*Section II.* (*c.*)—*Unsuitability of the Hospital accommodation.*

The state of the hospital accommodation at Aden was fully represented to Government in Quarter-Master General's letter, No. $\frac{1\text{-}6}{3857}$ dated 21st August 1873, and orders on the recommendation contained therein are now awaited.

*Section II.* (*c.*)—*Hospital for Aden Troops much needed.*

The provision of an hospital for the Aden troop is under consideration.

*Section II.* (*g.*)—*Turkish Privy should be closed; additional Latrines recommended.*

Application will shortly be made to Government for two additional latrines; and, if these are sanctioned, it is intended to close the Turkish privy alluded to.

*Section II.* (*g.*)—*There are no Urinaries for the Sappers and Miners.*

The provision of urinaries for the Sappers and Miners is also under consideration.

# SANITARY REPORT OF AHMADNAGAR FOR 1873.

## Section I.—Health of the Corps forming the Garrison.

The Corps forming the garrison at Ahmadnagar during the year 1873 were—

D Company Royal Horse Artillery, from 7th March to 25th November.

Detachment, 3rd K. O. Hussars from 1st January to 25th November.

Her Majesty's 13th Regiment N. I.

The health of the troops, both European and Native, has been very satisfactory. Improved on last year.

The average strength of the European Troops has been 299.

Average daily sick 4·47. Total admissions during the period into hospital 223.

Number of deaths two (2) only; both occurred in the D Company Royal Horse Artillery. Cause of death—

1 Remittent fever.

1 Rupture of intestines (kick from a horse).

No death occurred in the Detachment 3rd K. O. Hussars.

The health of Her Majesty's 13th Regiment N. I. has been very good, improved on last year, as the following table of increase and decrease will show :—

| H. M.'s 13th Regiment N. I. | 1872. | 1873. | Increase. | Decrease. |
|---|---|---|---|---|
| Strength. { Europeans | 6·5 | 6·9 | 4 | ..... |
| Strength. { Natives | 650·0 | 622·0 | ... | 28·0 |
| Admissions... ... | 753·0 | 488·0 | ... | 265·0 |
| Daily average sick | 18·8 | 17·0 | ... | 1·8 |
| Treated to strength | 11·7 | 8·2 | ... | 3·5 |
| Died in Hospital... | 3·0 | 1·0 | ... | 2·0 |
| Died out of Hospital | 1·0 | 2·0* | 1 | *One suicide and one accidental. |

The health of the European residents has been very good. The health of the Native community has been good, improved on last year. The average number of the Native community has been, including males and females, 4,417. The total deaths amongst them was 92, or 22 per 1,000 inhabitants. Principal cause of mortality, fever.

The prevailing diseases amongst them appear to have been ague, conjunctivitis, and diseases of the respiratory system. No epidemic disease of any description prevailed during the year.

Last year cholera prevailed in nearly all the villages around Nagar during the hot weather, but this year I believe there has been none. No case of small-pox has occurred in cantonment.

## Section II. (*a.*)—Drainage within the Cantonment.

Surface drainage good. Not aware of any system of underground drainage save inside the fort.

No jheels or marshes in the station or its vicinity.

This year, the rain being in excess of other years, where water lodged it was drained off.

## Section II. (*b.*)—Water Supply.

The water-supply has been sufficient in quantity and of very good quality.

The rainfall during the year, as registered in the Native Hospital, came up to 26 inches and 80 cents; rather more, I believe, was registered in the Royal Horse Artillery Hospital.

## Section II. (*c.*)—Accommodation for the Troops.

The accommodation for the European Troops has been very good.

There has been no overcrowding, and the ventilation has been satisfactory. Punkahs in barracks and hospital during the hot season, and in the latter until the middle of October.

The accommodation for the Native Troops is good. The hospital, 13th Regiment N. I., has been altered and greatly improved. The light is now much better, and the ventilation is good.

SECTION II. (*d.*)—CONSERVANCY.

The latrines and urinals for the European Troops have been kept in good working order with very little trouble.

The trench system in the 13th Regiment N. I. works well; but the distance the men, women, and children have to go is great, and most inconvenient, and a source of annoyance. The site is most objectionable, being the main thoroughfare of camp; and, while being unsightly and occasionally offensive, decency cannot be observed, inasmuch as people passing cannot fail to see those inside when answering the calls of nature. The screens can only be used during eight months in the year; during the remaining four the men and women have to go to the masonry latrines, which have, of course, to be kept in repair, the utensils kept in order, or they would otherwise corrode.

There are pucka built latrines, within distance for all the Native population in the cantonment, kept properly clean.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station is kept clean in every respect.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

Rations supplied to the Troops have been of good quality.

Grain very much cheaper, owing to the rainfall having been sufficient and opportune.

SECTION II. (*g.*)—OTHER DEFECTS.

No defects. Roads not watered, dust excessive, especially during April and May, for which sanction is recommended, the probable cost Rs. 500.

The sanitary state of the villages round the camp is very bad and calls for notice.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

None required.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

The sanitary state of the villages near the camp is very indifferent, and calls for improvement and supervision.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (d.)—Trench Latrine System.*

From inquiry it appears that there is a saving of about Rs. 267 per annum in the trench system, as compared with the cost of maintaining the permanent masonry latrines; and as the former description of latrine is far superior in wholesomeness to the latter, His Excellency the Commander-in-Chief considers that it should be continued.

*Section II. (g.)—Roads require watering.*

Watering of the roads has recently been sanctioned at the expense of the Cantonment Fund.

*Insanitary Condition of the Villages around the Camp.*

His Excellency the Commander-in-Chief would suggest the state of the villages alluded to being brought to the notice of the Civil authorities by Government.

---

## SANITARY REPORT OF AHMEDABAD CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

C/18 Brigade R. A.
A Detachment of H. M.'s 108th Regiment.
H.M.'s 3rd Regiment, N.L.I.
H.M.'s 9th Regiment, N.I.

The strength of the garrison is the same as last year, the only changes being the relief of the 9th Brigade Royal Artillery by the 18th Brigade Royal Artillery, and the increase of two Companies of the 9th N.I. from Dwarka and Burda Chowkie.

The health of these troops was good on the whole; small-pox prevailed to some extent in the Native Regiments during January to April; but it could scarcely be called an epidemic, being of a mild type. The 3rd N.I. had 30, and the 9th N.I. 17 cases, inclusive of women and children. None of these proved fatal. Vaccination was thoroughly carried out in both regiments, and one of the cases is said to have had marks of a previous attack of the disease, and several of vaccination.

The following gives the statistics as regards sickness compared with strength :—

I. European Troops—

| | |
|---|---|
| Average strength ... ... ... ... ... | 230·80 |
| Total admissions in the hospital during the year ... ... | 480 |
| Total deaths in the year ... ... ... ... ... | 1 |

II. Native Troops—

(*a.*) 3rd Regiment, N.L.I.

| | |
|---|---|
| Average strength ... ... ... ... ... | 642 |
| Total admissions in the hospital during the year ... ... | 957 |
| Total deaths in the year .. ... ... ... ... | 8 |

(*b.*) 9th Regiment N.I.—

| | |
|---|---|
| Average strength ... ... ... ... ... | 569 |
| Total admissions in the hospital during the year ... ... | 525 |
| Total deaths in the year ... ... ... ... ... | 7 |

The prevailing diseases among the European Troops were fevers of the remittent and intermittent types, due to atmospheric causes. The same remark applies to Native Troops also, to which may be added bronchitis, conjunctivities, dysentery, scurvy, small-pox, &c.

The European community in camp consists entirely of persons connected with the troops or on staff. There was but one death, that of Mr. Blake, Veterinary Surgeon, who died of heat apoplexy.

The health of the Natives in the Sudder Bazar, &c., was also good, notwithstanding a few small-pox cases. There were 83 deaths, giving a percentage of 4·04 on the total population.

### Section II. (*a.*)—Drainage within the Cantonment.

As stated in former reports, there is little or no artificial drainage, owing to the surface of the cantonment being flat.

An open drain, 590 feet long and 2 feet broad at bottom, with side slopes 2 to 1, was excavated for the purpose of draining off the rain water which lodged in the vicinity of the Royal Artillery Stables, and an open trench was also cut in front of the Warrant Officers' quarters, running parallel with the side of the road in the direction of the N. I. Hospital, with the same object.

### Section II. (*b.*)—Water Supply.

The water-supply is plentiful and of fair quality, though containing much chloride of sodium. The Saburmuttee runs past the cantonment, and the water thence is largely used in the Sudder Bazar.

A new well was sunk in the compound of the Royal Artillery Hospital, six feet in diameter, with a parapet wall all round six feet high, and provided with cross beams and rollers.

A wooden apparatus, consisting of teak-wood post and rollers, has been supplied to two wells in the lines of the 3rd N.I., to ease the lift of water.

### Section II. (*c*).—Accommodation for the Troops.

The accommodation for European Troops, according to their present strength, is insufficient; that for the Native Troops is ample. But, as stated in former years, some of the barracks occupied by the former are badly constructed and hot, and the hospital building is in all respects unsuited as such. All the defects are to be remedied in the project for new barracks, &c., for European Troops here under consideration, so that it is unnecessary to say more on the subject. Meanwhile a quarter-guard and cells for the detachment of British Infantry recently arrived are absolutely necessary.

Three solitary cells were constructed in one block for the Europeans with a lavatory and urinary detached, Warner's Force Pump having been fixed to the ablution room for supplying water to the tank which provides shower baths.

Similar pumps were fixed to three other lavatories in the Royal Artillery Barracks.

### Section II. (*d.*)—Conservancy.

The latrine arrangements of the British Troops are satisfactory.

The 3rd Regiment N.I., for want of space, have been allowed to use permanent latrines.

The 9th Regiment N. I. have the trench latrine system during the fair weather, and use permanent latrines during the monsoon.

The dry-earth system is not carried out in the Sudder Bazar, but the excreta are daily carted to the manure yard and there disposed of.

The disposal of the night-soil among the cultivators, to be spread on their fields to the east of the cantonment, which was sanctioned experimentally in 1872, having been found to be objectionable, has been discontinued. It is now buried in trenches every night.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The cleanliness of all the places in this cantonment is well attended to.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations supplied to the Troops are good. The Sudder Bazar is well supplied with provisions, vegetables, &c.

SECTION II. (*g.*)—OTHER DEFECTS.

A permanent yard for the slaughter of cattle and sheep on a proper site is very necessary. At present they are slaughtered in the open to the windward of the Sudder Bazar, not far from the latrines of the 9th Regiment N.I. and the nullas used by some of the bazar people, and the meat is exposed to the visits of flies from these places. Plan and estimate were approved by Government so far back as 1867, but no funds have yet been assigned for the work.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The measures adopted during the year were connected with drainage [*Vide* Sec. II. (*a*)].

Latrine accommodation for the Native followers is under consideration.

The main road of the Sudder Bazar has been made and metalled, at the joint expense of the Cantonment Fund and the residents of the bazar.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

The Committee have no suggestions to offer beyond a recommendation that early measures be taken to provide funds for the slaughter-house alluded to under Section II. (*g.*), and to arrange for the construction of the quarter-guard and cells for the British Infantry. [*Vide* Sec. II. (*c*).]

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (c.)—Accommodation for European Troops insufficient.*

The provision of proper accommodation for the European Troops at Ahmedabad is, and has been for some time past, under consideration.

*Section II. (c.)*
*Section IV.* } *Quarter-guard and Cells for British Infantry urgently required.*

A plan and estimate for the construction of these buildings was submitted to Government in January last.

*Section II. (g).*
*Section IV.* } *A Slaughter-yard very necessary.*

This being a departmental work, an extract from this report has been communicated to the Commissary General of the Army, with reference to Government Resolution, Public Works Department, No. $\frac{365 \text{ M. W.}}{1302}$, dated 1st June 1867.

---

## SANITARY REPORT OF ASIRGARH FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the Troops, both European and Native, has been good, and the general sanitary state is satisfactory, considering the many local deficiencies and drawbacks as can be expected.

| | |
|---|---|
| The average strength of Detachment 83rd was (remained from 1st January to 2nd December 1873) .. .. .. .. | 107 |
| Ditto. of Detachment 11th Regiment N. I., remained from 1st January to 14th November 1873 .. .. .. .. | 130 |
| Ditto. of Detachment 16th Regiment N. I., remained from 12th November to 31st December 1873 .. .. .. .. | 119 |
| Ditto. of Garrison Staff .. .. .. .. | 52 |

Of these different Corps the admissions to Hospital were as follows :—

| 83rd | 11th N.I. | 16th N.I. | Garrison Staff. |
|---|---|---|---|
| 172 | 98 | 45 | 20. |

From these the largest number of admission appears under the head of ague, paroxysmal and other fevers; viz., Europeans, fever 56=37 per cent. of admissions; Natives, 34 per

cent.; dysentery and diarrhœa 17=9 per cent.; Natives 6 per cent., syphilis and gonorrhœa 25=14 per cent. of admissions contracted partly here, Poona, or elsewhere; Natives almost nil.

Hepatitis 11 cases=6 per cent.; Natives, nil. During the year 7 Europeans were invalided, 3 for general debility, from remittent fever.

2 discharged the service for permanent disability from accidents received, one for hepatites, one for phthisis, both dying on voyage home. In the Detachment 11th Regiment Native Infantry, 7 men were invalided, chiefly "unfit."

2 deaths took place in Detachment 83rd Regiment, one from remittent fever, the other from hepatitis with abscess.

One death occurred among the Native Troops from remittent fever.

The general health of European women and children was good; some cases of ophthalmia occurred after the monsoon, requiring isolation till recovered.

The general health of bazar and cantonment has been satisfactory.

There have been otherwise no epidemic or other special sources of disease to record.

A dispensary was opened in the Pettah to aid in further securing the health of the bazar population, as also that of the fort and garrison, from epidemic and other contagious or unhealthy visitation in the neighbourhood.

### Section II. (*a.*)—Drainage within the Cantonment.

The drainage is open, natural, speedy and good over the rock, and there are no jheels or marshes in the station or its vicinity.

### Section II. (*b.*)—Water Supply.

The water-supply remains as last year, still insufficient.

### Section II. (*c.*)—Accommodation for the Troops.

The accommodation of the Troops, European and Native, was as follows:—

*For Europeans.*

| | c. space p.m. | Superficial area |
|---|---|---|
| Two new Barracks, average ... ... .. | 2,285 c. feet | 90 sq. ft. |
| Musjid Barracks, average ... ... ... | 1,413 „ | 128 „ |
| Quarter Guard, average ... ... ... | 1,240 „ | 82 „ |
| Solitary Cells 1 and 2 ... ... ... | 1,125 „ | 100 „ |
| European District Hospital ... ... ... | 5,453 „ | 278 „ |

Bath-rooms, lavatories, cook-rooms, latrines and urinals of above have been sufficient and kept in a good sanitary state; a new cook-house and latrines were added to one of the new patcherries, and two of the main walls of the hospital considered dangerous were rebuilt. The canteen is too small and inadequate for its purpose.

The Native Detachment were quartered in 6 blocks of pendalls without verandahs, each 160 × 20 × 8. Quarter Guard 18 × 108.

*The Garrison Staff and Detachment Hospital.* —One pendall block (no verandahs) is small and often overcrowded, the two small wards available being in all 130 × 10 × 9, a space too inadequate to meet the requirements of the station, it is hoped, however, that some of the additions proposed last year will be taken from the adjoining pendall blocks, and these remedy the evil complained of.

### Section II. (*d.*)—Conservancy.

In the latrines used by Europeans, dry-earth conservancy was duly carried out, and they were kept clean and in a good sanitary state. The garrison latrines used by Natives were kept clean; but, owing to the use of ablution water, the good result otherwise arising from dry-earth conservancy seems in some measure to have been defeated.

During the year the Seven Gates Shaft was appropriated for the Refuse Lowering Station apparatus, which was removed from the former site south of new barracks and will shortly be completed for use.

### Section II. (*e.*)—Cleanliness.

The cleanliness and sanitary condition of the station generally, Native bazar and private compounds, has been satisfactory.

### Section II. (*f.*)—Quality of Rations supplied to the Troops.

The rations and diet have been generally good. Beef has been issued to the Troops five days, and mutton twice a week with bread, potatoes, and vegetables, tea, sugar, &c., &c., of good quality and regulated quantity. The rations are cooked according to the wishes of the men themselves, and the variation thus introduced appears to conduce to the health and comfort of the Troops.

SECTION II. (*g.*)—OTHER DEFECTS.

Nil.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

1. A fixed site selected outside the Pettah for a small-pox localé, where the affected might be isolated and treated apart from the bazar.

2. Improvements in the water supply and distribution, &c., as also as regards cleaning out the tanks with additional wells and filters supplied to each, to render the water potable and wholesome.

3. Removal of the Refuse Lowering apparatus from former site to the Seven Gates Shaft connected with the eastern entrance to the Fort.

4. A Charitable Dispensary opened in the Pettah Bazars at foot of the hill.

5. Latrines suggested being placed outside bazar, (the former trench kind being deemed impracticable,) and places set apart and properly systemnized and supervised.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

1. One good percolating well or filter required in each tank, and of the remaining tanks not cleared out for years (if ever). One should be cleared out every year, to remove the filth in some 12 feet in depth which has accumulated therein. A system of pumps, pipes, &c., to conduct the water from each well or filter into suitable iron or other reservoirs placed near or at a convenient distance to barracks and adjoining tanks, thus doing away with the former appliances of dole dipping and bhistees and bullocks, &c., approaching close to and defiling the ground close to tanks.

2. A new Canteen required for Europeans.

3. More accommodation wanted in Garrison Staff Hospital, especially a cook-room and lavatory bath, or ablution room, together with an additional ward to check overcrowding.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II.* (*b.*)—*Water-supply imperfect.*

*Section IV.—Suggestions for remedying the same.*

As noticed in Section III., measures have already been taken to improve the water-supply of Asirgarh; and the suggestions in Section IV., paragraph 1, have been communicated to the Secretary to the Chief Commissioner, Central Provinces.

*Section II.* (*c.*)—*Canteen small and inadequate.*

*Section IV.—A new one required.*

In the month of June last the provision of a Canteen was recommended to the Secretary to the Chief Commissioner, P. W. D., Central Provinces; and the reply was that, on receipt of the project from Asirgarh, it would be submitted to the Government of India for orders as a work for 1874-75.

*Section II.* (*c.*)—*Accommodation in Garrison Staff and Detachment Hospital insufficient.*

*Section IV.—More accommodation wanted.*

The provision of a new Garrison hospital at Asirgarh was recommended to the Secretary to Chief Commissioner, P. W. D., Central Provinces, in July last; but no decision on the subject has yet been received.

---

## SANITARY REPORT OF BARODA CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the Baroda Garrison has not improved since last report, but deteriorated; although the sickness exceeds that of last year, if dengue be excluded, yet the mortality is small, one death only having occurred.

The average strength of the Detachment, Royal Artillery, at this station has been increased from 23'83 to 30'12. The number treated amounted to 81. The following is a list of diseases during the year :—Abscess 1, ague 45, bubo 5, condyloma 1, contusio 1, diarrhœa 4, dysentery 5, enlarged tonsils 1, epididymites 1, febriculæ 2, gonorrhœa 1, hepatitis 1, inflammation inguinal glands 1, ingrown nail 1, palpitation 2, rheumatism chronic 2, rheumatism muscular 2, syphilis primary 2, syphilis secondary 1, wound 1, epileptic vertigo 1. There were no deaths among those treated.

H. M.'s 4th Rifles have been located at Baroda during the year. The average strength of the regiment, exclusive of Europeans, was 620.

| | |
|---|---|
| The average number of daily sick was ... | 20·0 |
| The percentage of treated to strength was ... | 155·0 |
| „ „ of deaths „ „ ... | 0·1 |
| „ „ of „ to treated „ ... | 0·1 |

Admissions into hospital numbered 947, which, with a remainder of 14, gives a grand total of 961 under treatment.

There was one death during the year from crebio spinal meningitis.

That the health of the corps has deteriorated since coming to Baroda upwards of 3 years ago, may be seen at a glance from the following table :—

| | |
|---|---|
| Admission in 1871 ... | 514 |
| „ 1872 ... | 807 |
| „ 1873 ... | 947 |

As stated in last year's report, the tour of duty in Baroda should not exceed 2 years.

The amount of sickness in the lines among the women and children was, as usual, exceedingly great, and the mortality large.

During the year 3 women and 20 children died from fever, bronchitis, diarrhœa, scurvy, &c.

Dr. Roberts has favoured me with the following notes of his charge :—

The left half battalion, H. M.'s 22nd Regiment, N. I., marched from Nimach to Baroda during the present relief season, starting on the 20th November and reaching its destination on the 23rd December. Previous to the left half battalion leaving Nimach, a good deal of sickness, chiefly intermittent fever, had prevailed. On the march the men seemed to shake off this disease, and out of a strength of 312 all told the greatest number of admissions to hospital on one day was 16. Of these 16 three-fourth were cases of intermittent fever, but all were of a mild type. The other admissions during the march comprised bronchitis, boil, and one case a perineal abscess. This latter occurred in a Native Officer, and was attributed by him to riding on a hard cavalry saddle. A large quantity of pus accumulated in the perineal region and spread upwards over the pubis in front of the region of the bladder. The matter was evacuated, and the abscess healed favourably. There was no other case, with this exception, that in any way approached a serious disorder. The administration, at Rutlan on the line of march, of quinine hypodermically, to men who were victims to fever in Nimach, had the best result. No sickness of a contagious nature was encountered at any of the towns or villages through which the half battalion marched.

The encamping grounds were healthy, and for the most part well chosen. With only two exceptions, the water at all the encamping grounds was good.

The health of the general community inhabiting the station appears to have been better this year than last, as only one death has occurred ; the deceased was a woman who, before and after her confinement, suffered from diarrhœa, which proved fatal 10 days after giving birth to a child.

In the Sudder Bazar, with an average population of 2,531, there were 63 deaths and 24 births.

### Section II. (*a.*)—Drainage within the Cantonment.

As regards the cantonment generally, due attention appears to have been paid to drainage. Large trenches are cut in various directions to carry off the superfluous waters of the monsoon. The river Vishwamitree, in the immediate neighbourhood of hospital and Artillery barracks, occasionally overflows its banks, and has been known to submerge a large portion of camp, hospital compound, and Sudder Bazar. The Vishwamitree is a sluggish and *tortuous* stream about 25 yards wide, but twice as broad in the rainy season. It describes an irregular and winding course where it bounds the eastern portion of camp. To the west there is a tank of considerable size, resorted to by dhobies in and shortly after the rains set in ; but washing clothes there is not permitted when the water begins to decrease. There are no jheels or marshes in the station or immediate neighbourhood.

### Section II. (*b.*)—Water Supply.

The water-supply obtained from numerous wells in camp is ample and considered good. " Samples drawn from these wells were found by Dr. Leith, the late Sanitary Commissioner, to contain nitrates, indicating long-continued infiltration of impurities ; and also a considerable quantity of recent organic matter, because earth is well known to have only a limited power as a purifying filter, and to allow of organic matter being carried down from the surface of the ground by the rain that feeds the well." The waters of the river and tank already alluded to are in use chiefly for purposes of ablution, and are much resorted to by Native washermen.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The barrack set apart for the detachment of Royal Artillery is in a fair order, and amply sufficient for the accommodation of the few men who do duty here; but there is no hospital for the reception and treatment of sick Europeans at Baroda; one, however, has been sanctioned, and will, it is expected, be ready for use before long.

The regimental lines of the 4th Rifles, which are old and condemned, should be superseded by new ones. The hospital and out-houses are in fair order, but there are no quarters for medical pupils.

The allotment of one of the out-houses in the hospital compound has been sanctioned as quarters for the youths in question.

SECTION II. (*d.*)—CONSERVANCY.

The latrine and urinary provided for the Royal Artillery are at too great a distance from the barrack, and objectionable on that account, more especially in the monsoon, as the men are exposed to wet both going and coming. This could easily be rectified by constructing a covered way. The dry-earth system has been introduced, but is not in any good working order, as the men are heedless in the matter, and for the most part leave the mechanical details to the sweeper. But improvement may be looked for when the new barracks, hospital latrines, out-houses, &c., are erected.

The trench has been introduced but with indifferent results, as the sepoys do not care to work it effectively.

SECTION II.—CLEANLINESS OF THE STATION.

There is no apparent want of cleanliness in the station generally; the Native bazar is kept in admirable order, and presents a clean and tidy appearance.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations supplied to the Troops at Baroda have been uniformly very good, and never the subject of complaint. The rates are considered moderate.

There has been no unusual deviation in the market price of the food of the Native population generally.

SECTION II. (*g.*)—OTHER DEFECTS.

In addition to the foregoing, other defects requiring notice do not occur.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Trench latrines for the regiment have been in operation for two years, but I cannot report favourably of the system. It is under consideration to provide urinaries for the Sudder Bazar; the sewage hitherto has been disposed of either in sinks or reservoirs, which are emptied daily by the sweepers.

The only measures deemed necessary during the year to improve the sanitary condition of the station, have been as formerly to keep down rank vegetation, and lopping the branches of the trees above 16 feet from the ground, trimming hedges, &c.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

In building new barracks for Europeans and lines for Native soldiers, the suggestion that each barrack and line should stand on a plinth not less than 3 feet high with a spacious verandah all round, is one likely to improve the health of the Troops. Upper-storied barracks are calculated to be very hot; but built as suggested are perhaps best adapted for the changes of an Indian climate. The rooms themselves should be lofty, with walls of substantial thickness; and covered ways connecting the latrines with barracks should certainly be constructed.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (c.)—Regimental lines of 4th Rifles old and condemned.*

The provision of new lines is under consideration. It is reported that they will cost Rs. 34,000, whereas the hutting allowance is only Rs. 12,000.

*Section II. (d.)—Latrine and Urinary of Royal Artillery at too great a distance from the Barracks.*

A remark to this effect appeared in the Sanitary Report for 1872; but, on inquiry, it was found that they are not at so great a distance as to warrant the construction of new buildings. The General Officer Commanding the Northern Division was so informed.

# SANITARY REPORT OF BELGAUM CANTONMENT FOR 1873.

## Section I.—Health of the Corps forming the Garrison.

So far as can be ascertained, the health of the troops, Native and European, at this station for the year 1873, has been decidedly above the average—very good. The prevailing diseases have been amongst the European Troops. Fever of the quotidian intermittent type, not severe, very amenable to treatment, not often recurring, on the whole mild. Syphilis has been very prevalent, also amongst the Native soldiers. Fever, also of the intermittent tpye, catarrhal and pneumatic affections; and as regards the European and Native community inhabiting the station, I should say that both suffer chiefly from catarrhal, neuralgic, and rheumatic affections, derangements of the alimentary canal depending upon local congestions, chiefly of the liver, and almost all the ailments they suffer from are produced in great part by climatic influence. On the whole, the sanitary condition of the station for the year under review has been most satisfactory. No epidemics have prevailed, but isolated cases of measles and small-pox have occurred, very few casualties resulting.

## Section II.—(*a.*)—Drainage within the Cantonment.

Drainage in the camp is in a satisfactory state; it is not so in the cantonment bazar, funds not being available to carry out the necessary works. If stone-paved drains could be provided, it would be an immense improvement; and is the proper style of drain, especially for underground. In fact, drainage cannot be *perfect*, unless effected by means of iron piping or stone masonry; and either would entail a considerable outlay, and there are no funds whatever available for that or other works. The geological formation and the physical outline of the country greatly facilitate effective drainage in the camp, and contribute largely to the good health of the Troops, European and Native.

## Section II. (*b.*)—Water Supply.

The numerous specimens of water which I have examined afford no evidence of contamination; the amount of saline and other impurities is inappreciable. The sources of supply are wells which, by the end of March, begin to fail to a certain extent.

## Section II. (*c.*)—Accommodation for the Troops.

The barrack accommodation for the European Troops is ample, and the house accommodation or lines for the Native Regiments are as good as are usually met with. They are almost as badly situated as they can be, on the extreme south-east of the cantonment, at the lowest point of a sloping ridge, upon the most elevated part of which the magnificent barracks for the European Troops are situated. There is no such thing as overcrowding or crowding at all. The new barracks for European Troops will not be completed for some time. They are massive buildings constructed on the most approved principles, and it is supposed will render the medical officer's duties almost nominal. Though perfect, perhaps theoretically, I am of opinion they will be less healthy and much less comfortable than the old and much less expensive barracks.

## Section II. (*d.*)—Conservancy.

The urinaries and latrines provided for the Troops and Native populatiou are in a satisfactory condition; but I am of opinion that the latrines ought to be cleaned out at least four times in the day, viz., at 5-30 and 10 A.M., at 2-30 and 6-30 P.M. Further I consider it essential for the health of the cantonment that a sweeper should be in attendance, from daylight till dark at each latrine, whose duty should be to use, as directed, the dry-earth or lime *immediately* after a latrine has been used, and so prevent the emanation of noxious gases so offensive to the senses and dangerous to health.

The carrying carts do not, at present, do as much work as they ought.

## Section II. (*e.*)—Cleanliness of the Station.

As to the cleanliness of the station generally, Native bazars and private compounds, I think there is very little more that can be done. On the whole they are kept fairly clean.

## Section II. (*f.*)—Quality of Rations supplied to the Troops.

The rations are good of their kind, but I consider the meat very innutritious and calculated to produce a certain kind of tapeworm, the *Tuma Mediocane Elata*, or Nookless Tapeworm. The prices of food are subject to much the same fluctuations which influence market rates all over the world. An abundant or scarce harvest, extraordinary demand, sudden scarcity from untoward events, singular variation in the seasons, &c. &c. During the past year prices have not varied much from the previous years, and dearness of provisions has not been so great as to cause any general impression upon the community. The meat supply is abundant, but the quality is not as good as may be expected, the cattle not being properly fed.

SECTION II. (*g.*)—OTHER DEFECTS.

The roads are very defective, and in the rains dangerous and almost impassable; they should be macadamized, and there is an abundance of material in the neighbourhood for the purpose. Laterite and trap quarries exist and are easily worked. Many of the houses in the bazar should be removed altogether; they are in a dilapidated condition, and the occupiers are too poor to be able to repair them. Some of the streets in the bazar are, during the rains, in such a state that the poor people cannot leave their houses, and this disgraceful state of things might be remedied by surface draining and macadamizing the roads.

There are several wells in a dangerous condition: without any wall or other protection around the top. These are being attended to however, and before the year 1874 is over it is reasonable to expect that few well remain in the condition complained of.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Conservancy has been very strictly attended to, and everything tending to improve the sanitary condition of the camp and station. All superabundant vegetation and arborescent growths have been checked. Roads have been made and repaired. Wells have been enclosed or surrounded by a protecting wall, and, as far as the very limited means would permit, many other minor but important matters have been looked after. The same work must be persevered in for a considerable time, as much remains to be done in making repairing roads, and protecting walls to wells, more efficient conservancy and lighting, removal of old and dilapidated houses.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

These suggestions are anticipated by my concluding remarks in the last section.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II.* (*a.*) }
*Section II.* (*g.*) } *Roads require to be macadamized, and the Bazar properly drained.*

Enquiries are being made as to the cost of carrying out the above improvements.

*Section II. (d.)—Cleanliness of the Latrines.*

The foregoing report, it appears, was drawn up by the Senior Medical Officer at Belgaum, and, although signed by the Brigadier General Commanding the District as President of the Cantonment Committee, the latter Officer states that he does not concur in the views of the former with reference to the conservancy of the latrines and the work performed by the filth carts. With regard to the latrines of the European Troops, the Brigadier General reports that the dry-earth system (which requires the regular attendance of a sweeper for the duty mentioned by the Medical Officer) is carried out strictly as possible; but that for Natives this system is impracticable; and that if the carts were to make four trips to the manure yard daily, instead of two, their passage along the public streets would be a nuisance, especially at 10 A.M. and 2-30 P.M. Moreover, extra cattle would be required to work them.

---

## SANITARY REPORT OF BOMBAY FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

*Annual strength* 13·74.

The health of the Troops generally has been slightly better than in 1872. The number treated has been 1,370 from a strength of 1,374, or 100 per cent. The deaths have been 9, or 66 per cent., both to treated and strength, against 0·74 in 1872. The health of the 19th Regiment has been much worse than in 1872. The number treated having been 780 in 10 months, (or at the rate of 933 in the year) from a strength of 645, against 702 from a strength of 630; whilst the daily average has risen from 20·6 to 30·7. On the other hand, the health of the detachment of H. M.'s 11th Regiment N. I. has very much improved. The treated having been 60 in 10 months, or at the rate of 70 in the year from a strength of 170, against 143, from a strength of 158 in 1872; while the daily average has fallen from 5·9 to 2·7. The health of the 21st Regiment N. I. has also slightly improved, the treated having been 473 from a strength of 588, against 502 from a strength of 563 in 1872.

We are unable to account for the great increase of sickness in the 19th Regiment N. I., there having been no change in their circumstances during the year under review, but for the marked improvement in the health of the detachment of the 11th Regiment

N. I. sufficient explanation is easily found up to July 1872; they were placed in the most unfavourable condition, occupying the lines between those of the 19th Regiment N. I. and the sweepers' lines, the state of which has so often been reported on. There their health was so bad that, in the month stated, they were removed into the Esplanade pendalls, after which there was a steady improvement in their condition.

3. There has been no cholera among the Native Troops, but two cases of small-pox occurred in the 19th Regiment N. I. in March, both of which recovered. Two women and eight children of this regiment were also attacked, and one of the latter died. One child in the 21st Regiment N. I. was attacked and recovered. All were treated in the pendall on the Esplanade set apart for such cases. Scurvy was prevalent in the early part of the year, but yielded to treatment, a number of the men being treated as out-patients.

4. The principal diseases have been ague, rheumatism, diarrhœa, and dysentery: of the former 451 cases have occurred, of rheumatism 72, dysentery 48, and diarrhœa 36.

5. Eight deaths have occurred from the following causes: from fever 2, pneumonia 2, scurvy 1, jaundice 1, tetanus 1, odema of glottis 1, gunshot (suicidal).

6. Vaccination has been regularly carried on, both among the children and recruits. All children born in the lines, or brought from their native country without having been previously vaccinated, have been primarily operated on; while all others and all recruits whatever, bearing marks of vaccination and small-pox, have been re-vaccinated.

### Section II. (*a.*)—Drainage within the Cantonment.

No change has been made in the lines of the 19th Regiment (now occupied by the 20th Regiment N. I.). In the lines of the 21st N. I. there has been a complete change in the system of house drainage. The plans recommended by the Committee that sat in November 1872 have been carried out. The sunken tubs which formerly received the drainage from each house, and which were so unfavourably reported on in the report of Surgeon-Major Seward in September 1872, have been removed, and surface drain of cut stone with cemented joints have been substituted, whereby saturation of the soil by sewage water is entirely prevented. All defects of cleanliness at once become apparent, and the general surface drainage of the lines during the rainy season is greatly improved.

The condition of the lines of both regiments, as concerns the probable production of malaria, has been so frequently and fully reported on, that it seems unnecessary to repeat the statements already made. We shall, therefore, only say that the one abominable nuisance in the neighbourhood of the Marine lines, viz., the Sonapore drain, remains in full force. We trust, however, that the reclamation which is being extended in that neighbourhood will have the effect of abating it.

No change or addition has been made to the hospital occupied by the 19th Regiment N. I. The necessity for new latrines and a bath-room has been urged by both the military and medical authorities, but their erection has not yet been sanctioned. In the hospital of the 21st Regiment N. I. the bath-room and covered way to the latrines mentioned in last year's report, as being in course of construction, have been completed.

### Section II. (*b.*)—Water Supply.

The water-supply is good. The drinking water is entirely supplied by the Vehar main, and there are several wells in the vicinity of the lines which yield sufficient water for washing and other purposes.

### Section II. (*c.*)—Accommodation for the Troops.

There is sufficient accommodation for the Native Troops, but in the lines of the Marine Battalion the streets between the pendalls are very narrow, and there is not sufficient ground to admit of their being widened. These lines were built many years ago, when a much smaller space was allowed for the lines of a regiment than at present.

### Section II. (*d.*)—Conservancy.

There are no urinals in the lines. There are two latrines, one at Boree Bunder, the other in the Marine lines for the use of patients in the hospital. The men and familes of the Marine Battalion make use of the public latrines at Sonapore, and this arrangement answers well. There are no defects in these latrines. The necessity for a latrine and bath-room for the patients in the hospital, now used by the 20th Regiment N. I., has been urged by both the military and medical authorities, but their erection has not yet been sanctioned.

### Section II. (*e.*)—Cleanliness of the Station.

Not generally, but it is found very difficult to enforce habits of cleanliness in the lines of the Municipal sweepers.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

No rations are issued to the Native Troops; grain compensation has been received by them monthly.

SECTION II. (*g.*)—OTHER DEFECTS.

No defects beyond those pointed out in Section II.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The house and surface drainage of the Marine lines has been greatly improved, as pointed out in Section II. The erection of upper-storied barracks for a regiment of Native Infantry (in lieu of the Boree Bunder lines) has been strongly recommended and is under consideration.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

The Board has no suggestions to offer.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (a.) Sonapore Drain.*

The Sonapore drain nuisance has been so frequently represented to Government, that there is nothing more to add on the subject. In a Resolution in the Military Department, dated 28th January 1873, the Commander-in-Chief was assured that Government would endeavour to improve the existing state of matters.

*Section II.—(a.) Latrine and Bath-room for Hospital 19th N. I.*

*Section II. (a.)—Remarks the necessity for the above.*

An estimate for providing the above additions to the hospital was submitted to Government in November last, when it was ruled that, owing to the great pressure for funds, the work could not be sanctioned during the current year.

*Section III.—Removal of Regiment from Boree Bunder Lines.*

The absolute necessity for the removal of the Native regiment from its grossly insanitary surroundings at Boree Bunder to the healthy site on the esplanade, which has so benefitted the detachment of the 11th N. I. as mentioned in the report, has been acknowledged, and the construction of lines for them on the said site ordered. The Commander-in-Chief trusts that nothing will be permitted to stand in the way of this most necessary change being carried out.

---

## SANITARY REPORT OF BHUJ CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

| | | | |
|---|---|---|---|
| Garrison... | ... | ... | 20th Regt. N. I. |
| Average strength... | | ... | 634 |

This report is for the first ten months of the year only, as the head-quarters, with 6 companies of the 80th Regiment N. I., are in orders to leave Bhuj on the 13th November.

*Sickness.*

In this respect there has been a great improvement upon last year; the total admissions into hospital have been 569, of which 191 were due to ague.

The highest average daily number of sick was in January and February (59 and 54 respectively), when the men were still suffering from the fever which attacked them in the latter part of last year.

The average daily number of sick for the whole ten months has been 34·2.

I think that the comparative immunity from fever enjoyed by the regiment during the months of August, September, and October may be attributed to the unusually scanty rainfall in Bhuj and its immediate neighbourhood, the total amount registered in camp being only 5 inches and 11 cents.

No cases, either of cholera or small-pox, have occurred during the year.

Three deaths have occurred in hospital—one from diarrhœa, in a man who was already much debilitated from a recent attack of malarial fever; one from phthisis pulmonalis, and one from pneumonia.

Four other deaths occurred *out* of hospital: two suddenly (from fatty degeneration of the heart, and apoplexy respectively); and two cases of suicide, one by gunshot wound of the chest, and the other by drowning.

The health of the inhabitants of the Sudder Bazar has been good during the period under report.

The families of the regiment have been rather sickly, many cases of scurvy having been treated: one woman died from the disease.

The following table shows the principal diseases and the admissions into the regimental hospital from January to October, inclusive:—

| 1873. | Average Strength. | Total Admissions. | Average Daily Sick. | Ague. | Small-pox. | Rheumatism, Sub-acute & Chronic. | Syphilis | | Phthisis. | Scurvy. | Apoplexy. | Paralysis. | Disorders of the Intellect. | Bronchitis & Pneumonia. | Pleurisy. | Dysentery. | Diarrhœa. | Diseases of Spleen. | Gonorrhœa. | Guinea-worm. | Debility. | Contusions or Local Injuries. | Eye Affections. | All other Causes. | Prevailing Diseases. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | Primary. | Secondary. | | | | | | | | | | | | | | | | | |
| January | 638·4 | 108 | 59·4 | 46 | .. | 4 | .. | .. | ... | 1 | ... | ... | ... | 9 | .. | ... | 2 | 1 | .. | .. | 4 | 10 | .. | 31 | Fever. |
| February | 629 | 69 | 54 | 22 | .. | .. | 1 | .. | ... | 2 | ... | .. | .. | 5 | .. | 2 | 4 | 1 | 1 | .. | 3 | 9 | .. | 19 | Ague & Bronchitis. |
| March | 643 | 45 | 33 | 11 | ... | 1 | .. | .. | ... | ... | .. | ... | .. | 2 | ... | .. | 5 | .. | 1 | .. | 2 | 7 | 2 | 14 | Ague. |
| April | 620·9 | 41 | 26 | 10 | .. | 1 | ... | ... | 1 | 1 | .. | ... | .. | .. | .. | .. | 8 | 1 | .. | .. | .. | 5 | 1 | 13 | Ague & Diarrhœa. |
| May | 641·4 | 38 | 27·3 | 4 | .. | 3 | ... | .. | ... | 3 | .. | ... | .. | 1 | .. | .. | 5 | 1 | .. | 1 | .. | 2 | 3 | 15 | None. |
| June | 645 | 37 | 25·3 | 10 | .. | .. | 1 | .. | ... | ... | .. | .. | .. | 1 | .. | .. | 2 | .. | .. | .. | 2 | 5 | .. | 16 | None. |
| July | 641 | 47 | 29·3 | 15 | .. | 2 | .. | 1 | 1 | ... | .. | .. | .. | 2 | .. | 3 | 4 | ... | .. | .. | .. | 8 | ... | 10 | None. |
| August | 639 | 60 | 36 | 22 | .. | .. | 1 | .. | ... | ... | .. | .. | .. | 4 | .. | 5 | 2 | 1 | .. | 1 | .. | 11 | ... | 13 | Ague. |
| September | 629 | 55 | 31 | 17 | ... | 2 | 2 | .. | ... | ... | .. | .. | ... | 1 | .. | 2 | 5 | 1 | .. | 1 | .. | 5 | 1 | 18 | None. |
| October | 615 | 69 | 21·3 | 34 | ... | 3 | .. | .. | ... | 1 | .. | .. | ... | 2 | ... | ... | 3 | .. | .. | 1 | 1 | 5 | 1 | 18 | Ague. |
| November | 105 | 9 | 1 | 5 | ... | 2 | .. | .. | .. | 1 | ... | .. | ... | .. | .. | .. | .. | .. | .. | .. | .. | .. | ... | 1 | None. |
| December | 105 | 4 | 2·7 | .. | ... | 1 | .. | ... | .. | 1 | ... | .. | .. | .. | .. | .. | .. | .. | 1 | ... | .. | .. | .. | 1 | None. |
| Total.. | 545·9 | 582 | 28·9 | 196 | .. | 19 | 5 | 1 | 2 | 10 | ... | .. | ... | 27 | .. | 12 | 40 | 6 | 4 | 4 | 12 | 67 | 8 | 169 | |

The above-mentioned table has been completed up to the end of the year, and for November and December it is not considered that any further remarks are required under the headings above mentioned.

### Section II. (*a.*)—Drainage within the Cantonment.

There are no defects in the drainage of the camp, the cantonment being situated on a slope.

No jheels or marshes in the station or its vicinity.

### Section II. (*b.*)—Water Supply.

Under this head there is nothing to add to last year's report. Water has been both good and plentiful; but, unless a further fall of rain occurs, it is probable that the supply will fail next hot season.

### Section II. (*c.*)—Accommodation for the Troops.

The lines remain the same as in last report: no additions have been made.

The hospital accommodation has proved adequate to the requirements of the regiment, the sick list having been comparatively small.

### Section II. (*d.*)—Conservancy.

The trench system of latrines was introduced in the month of October, and had not proved offensive up to the time of the departure of the regiment:—

The accommodation, however, is *very scanty*.

In the hospital compound the dry-earth system of conservancy has been regularly and efficiently maintained. There can be no doubt that this plan is very suitable for a hospital latrine.

Since the departure of the head-quarters of the 20th Regiment N. I. the trench system of latrines has been in use with the Detachment 20th N. I., consisting of two companies, and has worked satisfactorily.

The Sudder Bazar pay for their own conservancy establishment, which consists of one sweeper only at about Rs. 6 per mensem. A report has been submitted to the Assistant Quarter Master General, Northern Division, for the introduction of the trench system of latrines in the Sudder Bazar and Dooleykhatta, at an estimated cost of Rs. 460 per annum.

### Section II. (*e.*)—Cleanliness of the Station.

The station generally has been kept clean during the period under report.

### Section II. (*f.*)—Quality of Rations supplied to the Troops.

None.

### Section II. (*g.*)—Other Defects.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The cantonment has been cleared of rank vegetation and weeds.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*—*g*.) ALREADY GIVEN IN SECTION II.

Though the regimental lines are not built according to the standard plan, the men are perfectly comfortable in them; and, as the only way they could be improved would be to rebuild them, a measure which would be attended with very considerable expense, from the difficulty in procuring wood, &c., they might be allowed to remain as they are.

---

## SANITARY REPORT OF COLABA FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the Troops at Colaba has been good during the past year. After the cessation of the rains there were a great many admissions from ague. This was probably due to the late and heavy fall of rain in September. No. 3 Battery suffered more from ague than either of the other two batteries. As the hygienic conditions were identical, I believe the increased sickness was due to longer residence in Bombay.

Five deaths have occurred by the following causes :—

| | |
|---|---|
| Valve disease of heart | 1 |
| Bronchitis | 1 |
| Hepatitis | 1 |
| Abscess of Liver | 1 |
| Removal of loose cartilage | 1 |

SECTION II. (*a*.)—DRAINAGE WITHIN THE CANTONMENT.

The drainage is good. There is a small salt marsh near the Infantry Butts.

SECTION II. (*b*.)—WATER SUPPLY.

The water-supply is good and sufficient, and is obtained from the Vehar Lake.

SECTION II. (*c*.)—ACCOMMODATION FOR THE TROOPS.

The accommodation for the Troops is good. There has been no overcrowding.

SECTION II. (*d*.)—CONSERVANCY.

The conservancy for the Troops is good, that for the Native population bad. The Natives are allowed to frequent the foreshore. Places are set apart marked by flags, and the Police have strict orders to prevent Natives going anywhere else.

SECTION II. (*e*.)—CLEANLINESS OF THE STATION.

None.

SECTION II. (*f*.)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

Rations have been good.

SECTION II. (*g*.)—OTHER DEFECTS.

Dust-bins or receptacles for refuse matter ought to be built; one to each barrack, and one for the hospital. Screen walls ought to be built for two of the hospital latrines, which at present are without them.

The old married quarters are ventilated by cowls, which is a system of ventilation only adapted to a cold climate, unsuited to India. It would be a great improvement and conduce to the health and comfort of the married people if ridge-roof ventilation were introduced.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Dust-bins or receptacles for refuse matter have been placed in various situations. This is a great improvement, and one that was much needed.

A salt-water plunge bath has been built on the harbour side of the foreshore. It is much frequented by the men.

Three of the old and objectionable married quarters have been pulled down, and four new ones erected. It is a pity that, when the new ones were in course of construction, they were not made larger; as it is, they are much too small for a married man and his family. The quarters are only built of bamboo and clay, and the expense of making them larger would not have been great. The roof ventilation is better than in the old ones, which was entirely by cowl. The new quarters are ventilated by cowls and by covered openings in the roof. Continuous ridge-roof ventilation would have been much better.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

*Vide* page 19.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (a.)—Marsh near the Infantry Butts.*

There is no reason to believe that the marsh referred to affects prejudicially the health of the Troops. The Brigadier General Commanding Bombay District reports that that idea was at one time entertained, but it was abandoned, as the particular barracks exposed to the marsh gave no extra average of sick.

*Section II. (d.)—Conservancy for Natives bad.*

Latrines have been erected for Natives at Colaba; and, although the question of establishment for them has been before Government for many months, it is not yet settled; consequently the latrines cannot be used.

*Section II. (g.)—Dust-bins required.*

The Brigadier General Commanding Bombay District reports that dust-bins for barracks and hospital are, in his opinion, unnecessary; and His Excellency the Commander-in-Chief concurs in that opinion.

*Section II. (g.)—Screen Walls wanted for the Hospital Latrine.*

An estimate for constructing screen walls to the hospital latrine will be submitted to Government, after the expiration of the current financial year.

---

## SANITARY REPORT OF DEOLALI CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

There has been no Corps stationed here permanently, but regiments and detachments continually passing through the station.

The general health has been very good. Ague has prevailed to a greater extent than in 1872. Probably owing to climatic causes there is no other endemic disease.

Nine deaths have taken place among the men, only one of which was a preventible disease, viz., dysentery.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

There are no defects in the superficial drainage, nor do any jheels or marshes exist in the vicinity.

Underground drainage is not required.

SECTION II. (*b.*)—WATER SUPPLY.

1. The water-supply for the camp is from eight wells at from 20 to 30 feet deep. It is both very good in quality and ample in quantity. It is not subject to contamination of any kind, excepting by articles dropped in by birds, the wells being uncovered.

2. The wells are cleaned out whenever it is found necessary to do so. The water is drawn by leathern buckets and conveyed to barracks by Puckallie bheesties.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

There has been no overcrowding and no defects in the building, excepting towards the end of February and the beginning of March, when there was temporary overcrowding.

SECTION II. (*d.*)—CONSERVANCY.

The conservancy by means of the dry-earth system is good, and the liquid and the solid excreta are removed in air-tight receptacles once daily at 8 o'clock P.M. to the manure-yard.

A large store for dry earth is much wanted.

The necessaries for the Native population are kept clean and removed in a similar manner.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

None.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations have been very good.

The porter supplied to the Troops has, during 1873, been of good quality.

SECTION II. (*g.*)—OTHER DEFECTS.

The Natives, in the vicinity of the cantonment to the south-east and outside camp limits, commit nuisances and defile the neighbourhood.

In the opinion of the Magistrate this nuisance is not so great as formerly. The Conservancy Serjeant and Magistrate frequently visit the place, and a Magisterial order appointing a place to the east of the railway line for the said Natives to commit nuisance is in force.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Trees have been planted and inequalities of the ground filled in.

A slaughter-yard to the south of the camp has been commenced building.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

The whole of the wells require covering.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER IN-CHIEF.

*Section II. (d.)—Dry-earth Shed wanted.*

The necessity for a dry-earth shed was considered in 1869, when Brigadier General Stock then said that in his opinion such a building was not required, there being a small earth closet attached to each latrine.

Brigadier General Gell subsequently reported to the same effect, and the Commander-in-Chief concurs in this opinion.

*Section II (g).—Squatters in the vicinity of the Cantonment.*

On this subject the General Officer Commanding Bombay District reports as follows :—"Squatters in the vicinity of the south-east angle of the cantonment; these being out of the limits are not under the rules. The Collector has been addressed, and he states he cannot prevent the squatters living where they do. A proposal to include the ground within military limits was negatived by the Government of India on the score of expense. Orders have, however, been issued to discourage the residence of Natives in the tope as much as possible, by prohibiting the employment of any who do not live in the new bazar. The place must, however, always remain a standing evil until absorbed in the cantonment."

*Section IV.—Wells require covering.*

The estimates for covering the wells at Deolali will be re-submitted to Government after the expiration of the current financial year.

---

## SANITARY REPORT OF DHARWAR CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

During the year 1873, 545 cases were admitted into hospital. 12 remained on the 1st of January, making the total treated 557.

The percentage of treated to strength was 86·2. Deaths to strength none. Deaths to treated none.

The daily average number of sick was 15.

One death is recorded under the head of abscess. On examining the records, it seems to have been the late Dr. Alleyne's opinion that it was a very bad case of scurvy, although at the beginning the gums had not the least sign of that disease. Dr. Alleyne, late in medical charge of this regiment, died at Hooblee on 10th September. He is reported to have suffered from chronic bronchitis and also from anæmia.

The prevailing diseases have been ague 132, contusions 43, abscess 36, rheumatism 36. As usual ague gives the largest number of admissions.

It was the opinion of the Medical Officer, 7th N. I., that this disease does not owe its origin to any malarial influence in or about Dharwar, but to the peculiar habits of the Native bathing in the open air, drying himself in the sun, and frequently exposed to a cold wind which checks the action of the skin, and thus produces the fever, which always assumes an intermittent type, mild in character, and which was cured on the skin performing its duty in 3 or 4 days.

*Contusions.*—Twenty out of the 43 cases admitted under this head were admitted in September and October, the regiment having commenced to build lines on the new site. Most of them were occasioned by quarrying, "a kind of work the men were unaccustomed to."

*Rheumatism.*—Of the 36 cases treated, 12 were the acute form; probably the majority of these were due to the same cause as that for intermittent fever. *Syphilis.*—33 cases of syphilis were treated in hospital; two of these were in hospital on my assuming charge of the Regiment, and, from their appearances, it is my opinion that venereal disease in a very bad form exists at Dharwar; and I would urge upon the Commandant the advisability of a Lock Hospital being established in this town.

From the proximity of Belgaum and the large number of Europeans at that station, and the Natives of Dharwar, doubtless going constantly to Belgaum, I think too great care cannot be taken to prevent the disease being communicated to that military station.

*Gonorrhœa* and its complications gave three admissions. On the whole, I consider the health of the regiments must have been good, only one death having occurred. Dr. Alleyne's death can in no way be attributed to the climate of Dharwar.

### Section II.—(*a.*) Drainage within the Cantonment.

On the 2nd September 1873 possession of the new cantonment was obtained, and line building commenced by sepoy labour. A great many drains were dug to convey the water shed to the two tanks in the new site, and a comprehensive plan for properly bunding the large tanks was submitted by me, as planned and estimated by Public Works Department, and is now, I believe, under consideration of Government.

In the old station there are no jheels or tanks having a prejudicial effect on health; but as the fort tanks were dried up in June and July, the inner fort tank was thoroughly cleaned and its water-ducts repaired; and so far good was done, both in improving the water supply and in removing about 40,000 baskets of fœtid mud from this tank.

The fort conservancy remained in the hands of the Officer Commanding, and his board of health under arrangement with the Collector; and the ditches, &c., were kept clean, and all nuisances prevented therein by military notice.

### Section II. (*b.*)—Water Supply.

In the new camp water-supply is likely to be abundant from two tanks and two wells which however require to be finished off for use by Public Works Department.

In the old station the Collector has executed important works to increase the supply to both town tanks (the Motee and Lall Talooks), and the fort tanks were carefully repaired. A scarcity of water occurred before these works could tell on the supply. I feel confident the operations of the year will nearly prevent, in future, severe scarcity of water in the old station.

But the quantity is bad, being muddy, and for drinking purposes troublesome to purify; there appears no remedy for this, when the wells dry up, as they usually do in summer time.

The rainfall was below usual average in 1873, especially in June, July, August and September; but plentiful rain fell in October. The total fall in the year, as registered at Civil Hospital, was 26 inches 88 cents.

### Section II. (*c.*)—Accommodation for the Troops.

The old lines here were condemned in 1866, and have been described in 1870 and 1871 reports; they are still in use; they accommodate 465 men, and some men live in two barracks in the fort that accommodate 60; and the remainder of the strength of a full corps, 712, (less men on furlough) have to double up in these unserviceable condemned huts. The remedy to build new lines at a new site was mooted seven years ago; and I received, on 2nd September 1873, final orders to begin to build new lines at a new site (2 miles from old); this is being done as rapidly as possible, and during 1874 I hope 3 or 4 companies will be in occupation of good quarters. At present part of the regiment is in tents at this new site, and the overcrowding of the past year will not occur any more.

The hospital in the fort is an excellent one, and fully accommodates the sick.

The military officers have no quarters reserved for them, and their mess-house and all their houses were appropriated in 1861 by civilians, and the troops removed to Kaladgi and recalled 18 months after; since return of the military in 1863 they found the mess-house, bought by Government, converted into a court-house, and their rights as to suitable quarters ignored. I made every effort in my power to obtain restitution, and received none.

Houses for officers and mess will have to be built at the new site during the next two years. But no proper arrangement has yet been come to to effect this, and no compensation has been granted to the military officers of mess-house, and suitable quarters for the past 11 years, nor has a single rupee been spent on roads, &c., at new site.

### Section II. (*d.*)—Conservancy.

When the 12th Regiment arrived (17th January 1873) there were no latrines or regimental sweepers; a half-and-half system of dry-earth in a field 800 yards from the lines was in vogue.

I immediately took steps to build temporary latrines to last two years, but it was not till June I received a regimental establishment of one filth cart and four sweepers or bildars; and for the past half-year the rear arrangements have been decent and satisfactory.

The townspeople have very insufficient latrines, and the atmosphere outside the town is affected, but not near enough the lines to be prejudicial to the troops, or call for interference by the officer in military command.

There are two good military latrines in the fort. Government allow one cart for fort conservancy and the night-soil, and all rubbish is removed and buried.

The remaining fort conservancy, cleaning fort, and ditch overgrowth, and road and side ditch repairs are all done under orders of the Officer Commanding at Dharwar; and the fort inner tank and the fort hedges have been improved much in the year 1873.

SECTION II.—(*e.*) CLEANLINESS OF THE STATION.

With the exception of the fort, reported on in last paragraph, the station conservancy is in the hands of the municipality, who carry it out according to their light; and, though it might be improved, I have nothing to say to it, as the military are not represented at the municipal board.

The military, however, indirectly support the municipal funds, as all food is taxed, and the regiment probably spends Rs. 7,000 a month in food alone.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The bazar is fairly supplied with wholesome articles of food; wheat is scarce and high priced, and thus the station is not liked by the North-Western Provinces portion of the sepoys of the regiment.

The local weights and measures are most intricate. I consider that the adoption here (and mostly all over India) of standard weights and measures, issued with stamp from Government factories, would prevent disputes and cheating, and be an excellent tax on shopkeepers for revenue purposes.

SECTION II. (*g.*)—OTHER DEFECTS.

None that come within the province of this report.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

As regards the old station such measures, if any, are in the hands of the Dharwar Municipal Committee.

As regards the new cantonment, speedy action is desirable on various matters, viz.,—

The Public Works Department or Executive Engineers Department here, is obstructed from executing the orders of Government and of military authorities promptly, owing to rules of control. During the four months the regiment has been building new lines at a new camp two miles off. "*Not even an estimate*" for wells, roads, tree-planting, removal of prickly-pear, and filling in pits there, or erecting public buildings as ordered by Government or superior military authority, "has yet reached me," nor any work whatever been done by the Public Works Department.

The speedy removal of the 12th Regiment from condemned to new lines fit for human habitation is emergent, both in a sanitary as well as in a humane point of view; and should not be delayed by waiting months, and probably years, for estimates for surveys, for estimates, and for Government sanctions. Grants of money spread over the official years 1873, 1874, 1875 should be at once made, and monthly progress reports from the Executive Engineer called for, and thus immediate action enforced.

In marked contrast to the above is the progress made by the 12th Regiment in building their lines, and it is expected one wing can be completed by December 1874 and the rest by December 1875.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

1. *Vide* page 17.

2. *Vide* pages 21,22.

3. On 11th June 1873 I ascertained from the Collector that no further action has occurred since receipt of the Government Resolution No. 1003 in General Department of 27th May 1868 in relation to the Contagious Diseases' Act.

In 1868 I was in command here, and was impressed by the ravages in my regiment and among the civil population caused by syphilitic disease.

(Also *vide* page 4 giving Medical Officer's opinion).

I would recommend that Government be asked to take the matter up from the last Resolution No. 1336 of 15th July 1868.

Native Troops deserve the same consideration in this matter that European Troops meet with, and I do not think the matter should be let drop, as it has been these past 5 years, because there are no European Troops here.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section I.* } *Establishment of a Lock Hospital.*
*Section IV.* }

The necessity for establishing lock hospitals at stations where Native Troops only are quartered has not yet been recognized by Government, nor is His Excellency the Commander-in-Chief prepared to recommend such a measure.

*Section II. (c.)—Accommodation for Officers.*

The General Officer Commanding Belgaum District was told in the month of September last that, in the opinion of the Commander-in-Chief, the best arrangement that can be made for the provision of accommodation for Officers at Dharwar will be to invite Native capitalists to build houses in the new cantonment on sites for that purpose.

*Section III.—Roads, wells, public buildings, tree-planting, &c., &c., will be provided in due course. The provision of roads is now under consideration in the Public Works Department.*

Two trial wells have already been sunk on the site where the new lines are being constructed, and sanction to complete them for permanent use has recently been obtained.

Government has directed the Superintending Engineer, Southern Division, to prepare the requisite plans and estimates for the public buildings in connection with the new lines; and an estimate for the planting of trees has been forwarded to the Controller of Military Accounts, with a view to his making provision for the same in the Budget for 1874-1875.

---

## SANITARY REPORT OF DISA CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

During the year 1873, the following Troops have been stationed in this cantonment:—
E Battery, 9th Brigade Royal Artillery.
H. M.'s 108th Regiment.
2nd Regiment Light Cavalry.
24th Regiment N. I.

The health of the men of the Battery for the 10 months, from January to October 1873, when the Battery marched to join the Camp of Exercise at Chinchwud, has been generally indifferent. Fever prevailed to a great extent, affecting 180 out of a total of 281. These, compared with the 10 months of last year, not including the epidemic of dengue, give an increase of 32 admissions. The total admission in Hospital for the above period have been 281, giving a decrease of 58 admissions; but apparently the increase of last year was due to the 99 admissions of dengue.

Taking all admissions, the result is an average daily sick of 12·88, or a proportion of sick to strength per cent. 9·56.

The occurrence of fever cannot be traced to any defective sanitation of the station or its vicinity, but to the climate.

Five deaths occurred during 10 months only:—

| | | |
|---|---|---|
| Hepatitis | ... | 1 |
| Sunstroke | ... | 2 |
| Delirium Tremens | ... | 1 |
| Accidental Drowning | ... | 1—out of Hospital. |

The health of the women and children has been, during the above period, very unsatisfactory, the latter having suffered the most.

The following is a tabular statement of sickness and mortality in H. M.'s 108th Regiment for 1872 and 73:—

| | 1872. | 1873. |
|---|---|---|
| Average Strength ... ... ... ... ... | 760 | 588 |
| Total Admissions from all Causes ... ... ... ... | 1,767 | 941 |
| Ditto Agues ... ... ... ... | 1,111 | 400 |
| Ditto Simple continued fever ... ... ... | 302 | 84 |
| Ditto Venereal diseases ... ... ... | 60 | 46 |
| Total deaths ... ... ... ... ... | 20 | 8 |
| Invalids ... ... ... ... ... ... | 21 | 23 |

The Battery, as a rule, suffered more than the 108th Regiment, the reason appearing to be that the men never got a change to Aboo unless sick, whereas there is always about a company of the European Infantry stationed at Aboo.

Last year an epidemic of dengue attacked both the Battery and H. M.'s 108th Regiment in July, and a wave of fever, intermittent and remittent, continued in the latter part of September and October, reducing the stamina of all and making them more susceptible of disease. More than 30 deaths occurred, and about 40 were invalided. This year the health of both improved, and the deaths were 13 and the invaliding about 40.

This year the health of the families of the 108th Regiment has been good, no epidemic of any kind attacking them.

The following tabular statement shows the relative proportions of sickness and mortality in the 2nd Light Cavalry for the years 1872 and 1873 :—

| | 1872. | 1873. |
|---|---|---|
| Average Strength | 301 | 284 |
| Total Admissions | 635 | 259 |
| Agues | 261 | 128 |
| Remittent Fever | 2 | Nil. |
| Rheumatism | 28 | 33 |
| Contusions | 34 | 26 |
| Eye Affections | 29 | 11 |
| Invalids | 5 | 14 |
| Deaths | 4 | 2 |
| Average number of Daily Sick | 15 | 8 |

There has thus been considerable decrease of sickness this year, compared with the last in the above Regiment.

The extent of sickness and mortality in the 24th Regiment N. I. shown in the following Table :—

| | 1872. | 1873. |
|---|---|---|
| Average Strength | 619 | 624 |
| Total Admissions from all Causes | 2,086 | 950 |
| Do. do. Ague | 1,065 | 556 |
| Do. do. Remittent Fever | 6 | 3 |
| Do. do. Dysentery | 24 | 14 |
| Do. do. Bronchitis | 11 | 37 |
| Invalids | 29 | 33 |
| Deaths | 12 | 7 |
| Average number of Daily Sick | 52·5 | 27·7 |

This year has been a healthy one for the above Regiment, as shown by the above comparative statement.

The families of the Native Troops have been healthy.

The general European community inhabiting the station has enjoyed excellent health. There has been no epidemic.

The health of the general Native community inhabiting the station has been pretty good, as illustrated by the following mortuary statistics :—

| | 1872. | 1873. |
|---|---|---|
| Average Strength | 10,000 | 10,000 |
| Deaths | 393 | 243 |
| Small-pox | 6 | Nil. |
| Fevers | 331 | 135 |
| Bowel Complaints | 30 | 29 |
| Accidents and Violence | 2 | 2 |
| All other Causes | 24 | 77 |

## Section II.(*a.*)— Drainage within the Cantonment.

None.

SECTION II. (*b.*)—WATER SUPPLY.

The water-supply is abundant and of good quality. The only source from which the water may be contaminated is from the mouth of the well.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

No insufficiency occasioning overcrowding in barracks or hospitals.

The accommodation for the Regiment of Cavalry, both in the lines and in hospital, is ample, and there are no defects to point out.

The lines of the N. I. Regiment are old, and everywhere show signs of decay, in spite of continual repairs.

SECTION II. (*d.*)—CONSERVANCY.

No part of the cantonment land is manured with station sewage.

SECTION II. (*e.*)—CLEANLINESS.

None.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

In June the beef issued to the 108th Regiment was reported on several occasions as of inferior quality, but later during the month it was very good. In August, on one occasion, the beef was pronounced of poor quality, but fit for issue, and an additional ¼lb. per ration was issued.

There was no unusual deviation in the market price of the food of the population.

SECTION II. (*g.*)—OTHER DEFECTS.

The want of roads is much felt throughout the cantonment, notably in the Officers' Lines of the European Infantry, the Staff Lines and the Officers' Lines of the Regiment of Cavalry. A road which was partially constructed through a part of the Cavalry Officers' Lines during the year in which the famine raged in Rajputana might at no great expense be continued, so as to join the main road near the Commissariat Porter Stores. It would be a great boon to all, and conducive to the general health of the station.

The great want in this cantonment is a Civil Hospital. The civil population alone is in round numbers ten thousand. Last year when fever raged all over the country, a number of deaths took place amongst them, and it is only reasonable to suppose that medicine and medical aid, had they been available, would have saved many of these lives.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Some improvement has been made in the surface drainage of the ground in the vicinity of the European Infantry Lines.

The drainage from the bath-rooms of the patcherries in the Royal Artillery Lines has also been improved.

Estimates were submitted to Government for providing wooden covers to all the Government wells in camp; but sanction was refused on account of paucity of funds for military work. (*Vide* Government Resolution No. 928 M. W. 2315, dated 30th November 1872.)

Royal Artillery Lines.

Iron pipe to each of the 13 bath-rooms of the old patcherry fixed.

European Infantry Lines.

Additional ventilation to the solitary cells provided.

Temporary urinary No. 155 removed and re-erected.

Certain improvements to the solitary cells executed.

The ground in front of Barrack No. 16 and 18 raised.

Native Infantry Lines.

Certain additions and alterations to the Hospital made.

A new dead-house constructed.

Old cook-house converted into servants' quarters.

The house formerly occupied by the Hospital Assistant converted into servants' quarters.

Additions and alterations to No. 5 Staff Serjeant's Quarters, now occupied by the Barrack Serjeant.

A cover over the well in the Hospital compound provided.

The following measures are under consideration:—

Plans and estimates have been submitted for four new cells on the standard plan for the European Infantry. The ventilation of the present cells has been improved.

A complete project is now with Government for the construction of European Barracks, but all action is postponed pending the decision of Government on the question of removing the Troops to Aboo.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

(*b.*) That wooden covers be provided for the wells.

(*g.*) That roads be constructed in the following localities :—

Along the front of each line of Officers' Quarters in the European Infantry Lines.

Along the front of the line of Staff Officers' Quarters.

Along the front of the Officers' Quarters in the Cavalry Lines.

That the road now partially constructed from the Native Infantry Hospital past the Cavalry Hospital be continued in a circuitous direction past the Cavalry Mess House and the Barrack Master's Quarters and Commissariat Stores, till it joins the main road near the Commissariat Porter Stores.

That a Civil Hospital be constructed in a suitable position, with accommodation commensurate with the probable requirements of the large civil population (about 10,000 souls) residing in this cantonment. Should this suggestion be carried out, it would be advisable to have a certain portion of the Hospital set aside for Staff Patients, for whom at present there is no accommodation.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section III. (g.)—Want of roads much felt throughout the Cantonment.*

*Section IV.—Recommends the construction of roads in certain localities.*

The want of roads was fully reported to Government in letter No. 10-220—5439, dated 25th October 1873, when it was recommended that an estimate for the construction of roads along the front of each range of Officers' Quarters be called for in the first instance, and that a sum, to be spread over an interval of time, so as to make it convenient to the State to discharge the expense, be sanctioned for their execution. No orders have yet been received on the above.

*Section II. (g.)—A Civil Hospital much required.*

*Section IV.—Recommends the provisions of such an Hospital.*

The provision of a Civil Hospital, in which accommodation could be provided for Staff Patients, is desirable. It rests with Government to decide whether such an institution can be provided.

*Section IV.—Recommended that wooden covers be provided to all the Wells.*

The estimates for covering the wells, referred to under Section III., will be submitted to Government after the expiration of the current financial year.

---

## SANITARY REPORT OF HAIDARABAD CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the Corps forming the garrison during the year under report has been favourable, as compared with the previous year. This may be attributable to the absence of dengue and fever admissions from fever of miasmatic origin. The river Indus was not so high; the water in the tanks and nullahs around, and in the immediate neighbourhood of cantonments, was in consequence drained off much more quickly than usual. The overflow of water in the Beylah to windward of cantonments was drained off by the cantonment authorities instead of, as in previous years, being allowed to dry up. The health of the Troops doing duty in the fort has also been favourable, the filling up of the tank below the fort (alluded to in last report) having been completed by the municipality.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The drainage is in the same state as reported last year; the rainfall has been small. The defects have not on this account been so apparent as in former years. The principal defect is that the main drain carries the refuse from the Sudder Bazar, and the greater parts of the camp into the hollow where the tanks are situated, from which the water for the Belooch Regiment and residents of camp is supplied. This will be obviated as soon as the water scheme (now sanctioned) is completed.

SECTION II. (*b.*)—WATER SUPPLY.

The European Troops are supplied from Jacob's Tank. The water is good and sufficient, provided the bhistees are kept up to the strength recommended by the Committee which assembled on 17th August 1872. The supply of the Belooch Regiment is obtained from the tanks immediately below and to the south of the plateau; these dry up before the middle of the hot season, when the supply becomes insufficient until the rise of the river Indus. As a large portion of the drainage of camp falls into these tanks; the water is not so pure as it might be.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

Accommodation for the European Troops sufficient, with the exception of the following, viz., regimental cells; accommodation for both Artillery and Infantry is quite inadequate. There is also no room where any lunatic in the station might be confined, without doing damage to himself, pending receipt of orders for his being sent to the Colaba Asylum.

The Native Officers' houses in the Belooch lines are inferior and unsuited for the required purpose.

A dead-room is required for the Belooch Hospital and also another for the Staff Hospital.

SECTION II. (*d.*)—CONSERVANCY.

No defects. No part of the cantonment is manured with station sewage.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

None.

SECTION II. (*f.*)—QUALITY OF RAIONS SUPPLIED TO THE TROOPS.

Rations supplied to the Troops are of good quality.

No unusual deviation in the market price of food of the population generally.

SETION. II. (*g.*)—OTHER DEFECTS.

In consequence of the low inundation fewer crops were grown to the south-west, and the fact of the health of the Troops having been better than the previous year, makes it appear advisable that less cultivation should be permitted within camp limits.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Filling in the tank under the Fort.

Draining off the water from under the Beylah.

Camp drains cleared throughout.

SECTION IV.—SUGGESTIONS FOR REMEDYING AND OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

As the water-supply, the scheme for which has now been sanctioned, will remedy the defects pointed out in the previous reports, the Committee has no particular suggestions to make, with the exception that in future years, in case of a high inundation of the river, cultivators should be restricted to those lands lying to the south and south-east of cantonments.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (a.)—Drainage in same state as reported last year.*

The Superintending Engineer in Sind reports that the little rain which falls at Haidarabad is absorbed by the soil so rapidly that he considers it undesirable to incur the expense of a system of drainage. The average rainfall is said to be not more than three inches in the year.

*Section II. (c.)—Regimental Cell accommodation inadequate.*

Plans and estimates for providing the full amount of cell accommodation, as allowed by the Regulations, have been called for.

No room for the confinement of a lunatic.

There is no special provision in the standard plan of hospitals for such cases, nor does it appear necessary.

Inferiority of the Officers' houses in the Belooch lines.

In a report by the General Officer Commanding Sind, dated 20th June 1873, it was stated that "the Native Officers' quarters consist of two rooms each 13′ × 9½′ and about 10′ 7″ high, with an enclosed verandah on one side, and a small yard about 10 × 20′. Each Native Officer has an aggregate of 247 square feet in the rooms in which he lives, which is somewhat *in excess of the number of feet allowed by the Standard Plan of 1867.*"

Dead-houses for the Belooch and Staff Hospitals required.

Plans and estimates for the construction of dead-houses to the above hospital have recently been submitted to Government.

*Section II. (g.)—Less cultivation should be permitted within Camp limits.*

*Section IV.—" Cultivators should be restricted to those lands lying to the south and south-east of Cantonments."*

Steps will be taken to give effect to this recommendation.

---

## SANITARY REPORT OF JACOBABAD CANTONMENT FOR 1873.

### Section I.—Health of the Corps forming the Garrison.

The health of the Troops has been better than usual, but still bad. The principal diseases were malarious fever, chest affections, cutaneous diseases, cellular tissue, and dysentery. Up to the end of November the percentage of treated to strength was 160·5, and percentage of deaths to strength 1·9.

The causes of disease are the drying up of inundation water in the neighbourhood of camp, decomposition of vegetable matter, and extremes of temperature.

### Section II. (a.)—Drainage within the Cantonment.

The Frontier Districts, being situate in the valley of the Indus, malaria always prevails more or less. In 1873 the country round camp was again almost entirely submerged. There is still a large tract under water.

### Section II. (b.)—Water Supply.

There are numerous wells affording an abundant supply of good water. It is however feared that during the hot season the Native population use water out of the canals, which are by no means pure.

### Section II. (c.)—Accommodation for the Troops.

The lines of the 2nd and 3rd Sind Horse and Jacob's Rifles are good. Those of the 1st Sind Horse very bad.

The accommodation in the hospitals is much under the regulation. This deficiency is much felt during the fever season.

### Section II. (d.)—Conservancy.

Conservancy in the lines of Regiments is good. The 3rd Sind Horse are building large latrines, which will be an improvement on the small ones now in use.

The conservancy in the Sudder Bazar is fair.

The cantonment roads cannot be kept perfectly clean, owing to the Government allowance for station conservancy being so small.

### Section II. (e.)—Cleanliness of the Station.

The state of the Sudder Bazar is not good as regards cleanliness.

### Section II. (f.)—Quality of Rations supplied to the Troops.

Food is of a good quality and fair price.

### Section II. (g.)—Other Defects.

The Family Lines of the 4th Sind Horse (disbanded) are in a ruinous state. There are also portions of a bazar in the middle of camp in the same condition.

### Section III.—Measures adopted to improve the Sanitary Condition of the Station.

Many trees have been cut down, and branches lopped from others, to promote a freer circulation of air. It is not considered advisable to cut down more at present. The experience of the last two hot seasons shows that large quantities of fresh timber may be required to make bunds to keep out the inundation. Denuding the station of growing timber might lead to its being swept away altogether.

New lines for the 2nd Sind Horse are in course of construction, and are almost finished.

An estimate was submitted, for an increased camp conservancy system, which was not sanctioned.

An estimate has been submitted showing the cost of removing the ruined family lines of the 4th Sind Horse. Many thus have been cleared away, and the Sudder Bazar a good deal improved by this measure.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

It would be most advantageous if the inundation water from the Indus could be prevented from reaching and surrounding camp.

An increased allowance for station conservancy is most desirable.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (c.)—Lines of the 1st Sind Horse in very bad condition.*

Plans and estimates for the construction of new lines for the 1st Sind Horse have been sanctioned; and it is expected that the work will be commenced on the completion of the lines for the 2nd Regiment, now in progress. The Superintending Engineer in Sind has been addressed on the subject.

*Section II. (c.)—Hospital accommodation under Regulation.*

Plans and estimates for improving the hospital accommodation, which is very defective, have been called for.

*Section II. (d.)—Cantonment roads cannot be kept clean on the present allowance for Station Conservancy.*

*Section II. (e).—State of Sudder Bazar as good, as regards cleanliness.*

*Section IV.—"An increased allowance for Station Conservancy is most desirable."*

The difficulty of keeping the station of Jacobabad clean with the establishment at present allowed, was noticed in the Sanitary Report for 1872; and after inquiring, it appeared that a conservancy establishment costing Rs. 2,028 per annum (being an increase of Rs. 1,704) was required; but as the Officer Commanding Sind Frontier Field Force considered it would be injudicious to impose a tax on the Sudder Bazar with a view to meeting the cost or a portion of it, he was informed that in the present state of the question affecting the levy of taxes in cantonments, His Excellency the Commander-in-Chief was not prepared to ask Government to sanction so large an outlay.

*Section II. (g).—Ruinous state of the late 4th Sind Horse. Portions of Bazar in Camp in same condition.*

An estimate amounting to Rs. 640 for removing the houses reported to be in a ruinous condition was submitted to Government on the 24th December last, and it was ruled that the work, not being considered emergently necessary, must be postponed for the present.

*Section I.*
*Section II. (a.)* } *Inundation of the Camp, and consequent sickness of the Troops.*
*Section IV.*

The works recently sanctioned under Government Resolution, Public Works Department, No. $\frac{3\text{ M. W.}}{28}$, dated 9th January 1874, will, it is hoped, effect some improvement in the health of the station; but it is feared that, from the causes mentioned by the Committee and for which there appears no remedy, it must always be unsatisfactory.

---

## SANITARY REPORT OF KIRKEE CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

*Royal Artillery.*

General health during the year very good indeed. Fevers of the malarial type showed a marked decrease from the admissions of 1872-1873, showing only 88 admissions from ague, whereas 1872 shown in returns 233.

*Sappers and Miners.*

The health of the Sappers and Miners, the only other Corps occupying Kirkee, has been good, although the men have experienced a good deal of fever, owing to the nature of their occupations during the year. The Regiment is building its lines, and the tile and brick making causes exposure to cold, damp, and sun. The admissions during the year amount to 525 as compared with 296 in the previous year; the increase is chiefly due to febrile affections, which, however, have not been of a persistent or complicated nature. A few days rest in hospital under appropriate treatment has generally been sufficient to return the men to their work. No deaths occurred during the year, and no cholera, small-pox, or other epidemic disease occurred. The health of the civil population has been good.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

*Royal Artillery.*

*Drainage.*—Surface seems to answer ; the natural slope of ground about barracks rendering drainage an easy matter as a rule.

There is, however, one source of soakage which urgently requires attention, viz., wasted water from married quarters hospital, female hospital, and quarters in hospital compound.

The water from bath-rooms is allowed to run out along the surface of the ground, in some instances undermining the walls of buildings. A proper sunk reservoir of iron would obviate this very unsatisfactory state of matters.

SECTION II. (*b.*)—WATER SUPPLY.

*Royal Artillery.*

Water-supply for ablution purposes ample.

For drinking purposes of good quality ; but, as the latter is procured from a well in close proximity to the public highway, it is most desirable that pollution of the water should be guarded against, by placing a cover over this well ; at present it is open, and of course receives whatever may be blown into it by winds.

The present open dipping wells or tanks should be closed, and closed raised iron tanks with cocks should be substituted.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

*Royal Artillery.*

In all respects satisfactory.

*Sappers and Miners.*

Huts bad ; but, as the regiment is building new lines, it is not desirable to incur any outlay on the old site. The present insufficient accommodation of the hospital, as pointed out last year, as regards an eye-ward, dead-house, and quarters for the Apothecary and Hospital Establishment, should all be provided on the new site.

SECTION II. (*d.*)—CONSERVANCY.

*Royal Artillery.*

*Latrines.*—Dry-earth conservancy answers very well indeed.

Urinals on the whole kept clean, but dammering twice a month only with pitch is considered not sufficient to keep conservancy receptacles and utensils free from offensive smell. It is suggested this dammering process should be carried out more frequently.

*Sappers and Miners Bazar, &c.*

The dry-earth system of conservancy should be maintained ; but unfortunately the open trench latrine system has been introduced, and, if further extended, the health of the community may be found to suffer. In the Native lines the privies are uncovered and consequently no dry-earth system of conservancy can be carried out : the result is, that the stench at times is almost unbearable, and complaints arise in consequence.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

*Royal Artillery.*

Barracks well attended to, as regards cleanliness.

Sappers and Miners and cantonment generally.

No refuse is allowed to collect in Officers' compounds, and bazar kept clean.

SECTION II.(*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

*Royal Artillery.*

General quality of rations very good.

SECTION II. (*g.*)—OTHER DEFECTS.

The manure yard has been removed farther from the occupied part of the cantonment, as recommended last year ; surface drainage of the patcherries should be made more satisfactory, as at present water collects and stagnates in the earthen surface drain.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Trench latrines for followers have been introduced and ground allotted for the purpose. Rupees one hundred was granted on the 4th February by the Major-General to the Executive

Engineer, for the purpose of providing iron receptacles and planting trees to receive and absorb the waste water from hospital, patcherries, and barrack buildings.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS *(a.—g)* ALREADY GIVEN IN SECTION II.

All open dipping wells or tanks should be replaced by closed raised iron tanks with cocks, in order to prevent contamination of the water supply ; and no further open trench latrine system should be attempted, but the dry-earth system of conservancy strictly enforced, and the present surface drainage from patcherries improved by laying down open iron gutters.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (a)*
*Section II. (g)* } *Defects in the Drainage.*
*Section IV.*

The General Officer Commanding Poona Division has been requested to furnish an estimate early next financial year, for improving the defects in the drainage at Kirkee.

*Section (b).—Covering of Well.*

An estimate for covering the well alluded to has also been called for, and will be submitted to Government early next year.

*Section II. (b)*
*Section IV.* } *Iron tanks with cocks should be substituted for the present open Dipping Wells or Tanks.*

The above improvement was recommended in last year's report, and an estimate for giving effect to it was called for and furnished. The matter is held in abeyance pending reply to an inquiry as to the possibility of levying a water-rate on the inhabitants of Kirkee to re-imburse Government for the outlay.

*Section II. (c.)—Hospital accommodation for Sappers and Miners.*

A new hospital for the Sappers and Miners will be provided at the site whereon new lines are now in course of construction.

*Section II. (d.)*
*Section IV.* } *Dry-earth system of Conservancy should be maintained.*

It is remarked that " the dry-earth system of conservancy should be maintained ; but, unfortunately, the open trench system has been introduced, and, if further extended, the health of the community may be found to suffer."

This opinion is not borne out by the experience gained at other stations where trench latrines have been in use for the last two or three years ; notably at Poona, close by, in the report of which station it is stated that the system is generally approved. The General Officer Commanding the Poona Division will be called upon to furnish a more satisfactory explanation on this point.

*Section II. (d).—Privies in Native lines are uncovered, consequently dry-earth system cannot be carried out, &c.*

With reference to this remark, the Officer Commanding the Sappers and Miners reports that " the dry-earth system is carried out as far as practicable ; and this is the first time that it has been brought to my notice that the privies in question were in any way offensive."

The General Officer Commanding Poona Division has been called upon for further report on this matter.

---

## SANITARY REPORT OF KOLHAPUR CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the corps, during the past year, has been good ; the greatest number of admissions, 212, was on account of intermittent fever.

There was one death only, from gangrene.

No cholera and no snake-bites.

Deaths in the cantonment bazar as follows :—

| | |
|---|---|
| Bronchitis (adults) ... ... ... | 1 |
| Anæmia do. ... ... ... | 1 |
| Diarrhœa do. ... ... ... | 1 |
| Infantile diseases (infants) ... ... | 2 |
| Total... | 5 |

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The camp appears to be singularly well situated in this respect; there are no defects to speak of, and no jheels nor marshes in the vicinity of camp.

SECTION II. (*b.*)—WATER SUPPLY.

The water-supply in camp is derived from 12 wells, 10 of which however have an insufficient supply of water in the hot weather.

Four of these wells are set apart for the Native Regiment stationed here, and for the inhabitants of the cantonment bazar.

The state of the wells used by the Regiment demand, as was reported last year, immediate attention; as two of them, that used by the Hindoos and that used by the Purwarees, dry up, the former partially, and the latter entirely during the hot weather.

The water is good enough, what there is of it.

The above is the same report as last year. Since then two of these wells have been cleaned, and one is to be deepened by the Executive Engineer as soon as it becomes dry in the hot season.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

Accommodation ample. Hospital excellent.

SECTION II. (*d.*)—CONSERVANCY.

The trench latrine system is in force in this station, both for the Troops and the residents in the bazar.

The latrines are not used.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

None.

The regulations as per S. G. O. Section, cantonments and quarters, paras. 11-13, are thoroughly carried out in this station.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The price of grain varies very much.

The various provisions supplied are good. The cantonment bazar is supplied from the town of Kolhapur.

SECTION II. (*g.*)—OTHER DEFECTS.

Not sufficient water in the hot weather.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Every precaution which experience could suggest, and unremitting attention carry out, has been employed to keep the camp healthy with the best results. Were the grazing fund appropriated for the benefit of the station, it might be much improved and beautified, more trees might be planted, new wells dug, the old ones cleaned, a station garden established, and other useful objects promoted.

But in the absence of funds, which being derived from the station should be spent on it, the hands of the Committee are tied.

The improvements this year have been the cleaning of two wells in the 14th Lines by the Executive Engineer.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

Suggestions at page 21 of this report.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (b).—The state of the wells demands immediate attention.*

*Section II. (g).—Not sufficient water in the hot weather.*

This matter has already received attention, as noted in Section III. Government sanctioned the sum of Rs. 360 for deepening one of the wells in September last, as an experiment; and, if successful, estimates for deepening other wells will be submitted to Government for sanctien.

*Section III.—Observes that it would be advantageous to the Station if the Grazing Fund were appropriated for its benefit.*

The orders of Government require that Grazing Funds at stations such as Kolhapur, where the Cantonment Act is not in force, shall be credited to the State; but it may be remarked that from such realizations Kolhapur receives Rs. 514 per annum for the planting and watering of trees, which is as much as it can expect.

# SANITARY REPORT OF KURRACHEE FOR 1873.

## Section I.—Health of the Corps forming the Garrison.

During the year 1873 the Garrison of Kurrachee consisted of the B/9th Royal Artillery, the 66th Regiment of Foot (up till the end of November when the Corps embarked for Belgaum), the 1st Belooch Regiment, and during November and December a detachment of the 56th Foot (from Poona).

*B/9th Royal Artillery.*—The general health of this battery has been excellent during 1873. The extent of sickness and mortality has been exceedingly small; the chief diseases have resulted from malarial influences of a very mild type. Only one death has occurred from enteritis not attributable to endemic causes.

*66th Foot.*—During the year 1873 (up to the 20th November), the health of the regiment has been very good. The prevailing diseases have been fevers. These caused 332 admissions into hospital out of a total number of 721 or 46·04 per cent. The total number of deaths at head-quarters has been 4, viz., 1 from enteric fever, 1 from sunstroke, 1 from rupture of spleen, and 1 from phthisis pulmonalis. The causes to which the prevalence of fevers appears attributable, are the objectionable site of the cantonment on what evidently has been in former days the bed of a river or water-course, the alluvial nature of the soil, and the retentive clayey nature of the subsoil; the constitution of the water-supply is also of an objectionable nature and capable of producing sickness.

*1st Beloochees.*—The health of this regiment has been very good. The chief diseases in order of frequency were ague, bowel affections, contusions, bronchitis, conjunctivitis, and venereal diseases. Nine men died in hospital, and two out of hospital. The causes of mortality were diarrhœa, bronchitis, calculus vesica, ague, pericardites, pneumonia, and accident. Causes of disease, extremes of temperature and local malaria.

*The Detachment of the 56th Foot.*—Only arrived here on the 4th November, and has since enjoyed good health, most of the patients in hospital having contracted their diseases in Poona. One death occurred on the 27th November, when a woman was brought into hospital, between 2 and 3 A. M., suffering from severe gastro-intestinal irritation with great depression and algidity. She rallied slightly at first under treatment, the vomitting and purging having diminished, and the volume of the pulse improved; but afterwards she became weaker, and gradually sank throughout the day, dying at 4 P.M. The attack appears to have been caused by eating some fish the night before, many of which, especially in the tropical seas, even though not decomposed, produce poisonous symptoms; but it is not known whether the fish eaten in this case was healthy or otherwise.

*Ghizree Sanatarium.*—The health of the convalescents, sent for change of air and treatment during the year 1873, has been satisfactory, and that of the effective staff and Native followers has been excellent throughout the year. The health of the general community has been excellent, and the year 1873 appears to have enjoyed a peculiar immunity from any excessive sickness.

## Section II. (*a.*)—Drainage within the Cantonment.

The remarks on the drainage remain the same as in last report (for 1872). There is no system of drainage, and no jheels or marshes in the vicinity of cantonment, with the exception of a large tract of salt mangrove swamp between the sea and the camp. This is daily submerged by the tide; and, although it is said to act injuriously on the health of the station, it seems doubtful whether such is really the case or not.

## Section II. (*b.*)—Water Supply.

The water-supply is ample in quantity as regards the European Troops, but full of saline ingredients.

In the Napier barracks (occupied by the 66th and 56th) it is obtained from the commissariat well at the north end of camp, and conveyed by means of pipes to a large reservoir in barracks, from whence it is drawn by bhistees.

In the Somerset barracks (occupied by the B/9th Royal Artillery) the water is supplied from the commissariat well in water-carts. There are no apparent sources from which it may be contaminated, either in the wells or in the mode of drawing and distribution. The same method is pursued for the Ghizree Sanatarium.

In the Belooch regiment the water is supplied by packaulie bhistees at the rate of 13 packauls per company per diem. This is reported to be but a scanty allowance.

Last year the supply to this regiment was reported to be plentiful; but this would seem to have been erroneous, as there is no difference in the arrangements between this year and last.

### Section II. (*c.*)—Accommodation for the Troops.

As regards the European Troops the accommodation is reported to be ample and excellent, and no overcrowding either in barracks or hospitals.

In the Belooch regiment, the barrack accommodation is in excess of what is required, but the hospital, although reported sufficiently large, is somewhat deficient in accommodation for the second-class hospital servants, amongst whom overcrowding exists. There are no quarters for hospital assistants or apprentices, and about six new quarters are required.

### Section II. (*d.*)—Conservancy.

The dry-earth system of conservancy is in operation throughout the European Troops, and works well. There are no defects in the latrine or conservancy utensils. The latrines in the Belooch regiment are of pucca brick, and sufficiently large and suited to the system of conservancy in force. An order was issued by Government (G. G. O. Nos. $\frac{251 \text{ and } 368}{1873.}$) directing that iron filth receptacles were to be struck off the list of barrack stores supplied to Native hospitals. These receptacles have however not been returned, as no other suitable system of conservancy was proposed instead. There is no ground within cantonment limits manured with station sewage. The sewage from the Napier barracks is buried in pits south-east of cantonment, and that from the Belooch lines and Somerset barracks deposited in a manure yard north-east, the contents of which realize Rs. 60 monthly and are used for manuring the cultivated ground along the banks of the Lyaree river north of cantonments. The Native population are supplied with public latrines in many parts of Kurrachee, which appear to be fairly used and kept tolerably clean. The dry bed of the Lyaree near the town and Bagdadee lines, is, however, extensively resorted to for purposes of nature. This nuisance has recently attracted the notice of the municipal authorities, and will doubtless be soon rectified.

### Section II. (*e.*)—Cleanliness of the Station.

The station generally is kept very clean, and is constantly supervised by the Cantonment Magistrate personally and by the Conservancy Serjeant.

The Sudder and subsidiary bazars are all in municipal limits, and are fairly looked after by the municipal authorities. The environs of the town are by no means clean, but have been reported to the municipal authorities.

### Section II. (*f.*)—Quality of Rations supplied to the Troops.

The quality of the rations has been good and the quantity sufficient.

The price of grain has not been so great as it was in 1872. The awards for grain compensation to fighting men and public followers being as follows :—

| 1872. | 1873. |
|---|---|
| Rs. 1-15-0 and Rs. 1-2-0 | Rs. 1-10-0 and Rs. 0-10-10 |

### Section II. (*g.*)—Other Defects.

No defects appear to call for particular notice in the station itself; but at Ghizree Sanatarium, although the defects noted last year have not been all reiterated, the want of a road from the sea to the barracks is again noted, and appears to take away much of the usefulness of the Sanatarium, as only the stronger men among the convalescents are enabled to reap the salutary effects of sea-bathing. The ground between the sanatarium and the beach being composed of hard irregular stony surface and deep sandy shifting hillocks of more than one mile in extent, renders sea-bathing impracticable for the weaker men, on account of the fatigue experienced by walking over such ground to the sea.

### Section III.—Measures adopted to improve the Sanitary Condition of the Station.

At the Ghizree Sanatarium, the present open verandah in front of the convalescents' barracks, which was much complained of last year on account of the incessant glare, is being provided with trellis work, which will materially mitigate the inconvenience hitherto felt in this respect.

It is also under consideration to cut surface drains in the dry jheel at Ghizree, and to remove a part of the bund there, to carry off any rain-water that might enter the jheel.

In the Napier barracks a masonry box-filter, on Colonel Bell's plan, has recently been constructed at the reservoir, with the intention of providing filtered water for the European Infantry. The water is pumped into the filter from the existing reservoir in the lines. The municipality have recently taken active measures towards promoting a scheme for bringing in water from the Mulleer river to Kurrachee. This, when completed, will prove a great boon to the whole community, both inside and without Military limits.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

The Medical Officer in Charge of the Detachment of the 56th Foot makes a suggestion, with reference to an improvement in the water-supply to the Napier barracks, which seems to be worthy of consideration. The remarks (*verbatim*) are as follows :—

"As the barrack accommodation is excellent and the water-supply good and ample, obtained from a well in barracks, I would suggest that it be conducted into the rooms by pipes, thereby obviating the necessity of employing bhistees, whose leather bags or mussacks are liable to be coated with dirt, unless regularly inspected, and might prove a fertile source of disease when cholera or dysentery prevailed."

The cost of carrying out this suggestion would probably repay itself by the saving which would be effected in water-carriers' wages.

With the exception of the above, there do not appear any other suggestions necessary to offer.

It may be as well, however, to record that, with the exception of the trellis work to the verandah in the convalescent barracks at Ghizree, the other suggestions offered in last year's report have not been effected, and several of them would appear to be much needed.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section I.* } *Inferiority of the Water-supply, with suggestions for remedying the*
*Section IV.* } *same.*

The General Officer Commanding Sind District has been requested to furnish an estimate of the cost of conveying the water into the rooms by pipes, as suggested in Section IV., with a statement of the saving that would be effected by dispensing with the services of the bhistees.

*Section II. (a.)—Drainage—No system of.*

The Superintending Engineer in Sind, to whom the question of drainage was referred last year, reported that it was quite unnecessary at Kurrachee, as rain only falls there about once in three years, and a few hours after the fall the ground is perfectly dry. This was reported to Government in Quarter Master General's letter No. $\frac{9-65}{5588}$, dated 30th October 1873

*Section II. (c.)—Deficiency of accommodation for Hospital Servants.*

A plan and estimate for the provision of additional accommodation for the second class hospital servants will be submitted to Government after the termination of the present financial year.

*Section II. (g.)—Want of a Road between the Sea and the Barracks at Ghizree Sanatarium.*

His Excellency the Commander-in-Chief has directed the General Officer Commanding Sind to see that this defect is remedied when the new barracks are constructed at Ghizree, plans and estimates for which are now in course of preparation.

Defects noticed in previous year's report.

As remarked above, plans and estimates for new barracks on another site at Ghizree are under preparation ; it is therefore undesirable to incur any further expense in improving the existing buildings.

---

## SANITARY REPORT OF MALIGAM CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The general health of the Troops has been good throughout the year.

Ague and affections of the digestive system have been the most prevalent diseases. They have not, however, been generally of a severe nature, and appeared to be due to climatic causes.

The proportion of sick to strength for the year was 62, a diminution on the previous year of 22 per cent. There were three deaths.

The health of other residents in camp, both European and Native, has also been good.

There was some small-pox, both in the lines and Sudder Bazar during the hot season and early part of the rains. Eleven cases occurred in all, the first in March, the last in July. The disease was not of a severe type, and all the patients made good recoveries. They were all removed for treatment and isolated in the small-pox hospital. Their clothes and bedding, and that of their attendants, were burnt before their discharge.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The drainage within cantonment is very good. There are no jheels or marshes in or near the station.

SECTION II. (*b*).—WATER SUPPLY.

The supply from the wells used for drinking purposes, and which are surrounded by solid masonry slopes and drains, has been abundant and good.

SECTION II. (*c*).—ACCOMMODATION FOR THE TROOPS.

For the accommodation of the wing of the regiment which joined from Tanna in February, two barracks, a large gun-shed and the verandah of the Arsenal were partitioned off into separate quarters; a large room in the arsenal, and several detached buildings were also brought into use.

The position and general sanitary condition of all these quarters is unexceptionable, but the whole hardly afford sufficient accommodation for the wing without crowding.

SECTION II. (*d*).—CONSERVANCY.

The trench system of latrines for the Troops has been continued and found to work well.

SECTION II. (*e*).—CLEANLINESS OF THE STATION.

No remark.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

Supplies of grain and vegetables in the bazar have been abundant and good, and at no season much above the average prices.

SECTION II. (*g*).—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The old Native Infantry Hospital, situated to the south of the Sudder Bazar, has been brought into use for the isolation and treatment of cases of small-pox or other infectuous diseases occurring in the camp.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

None.

---

## SANITARY REPORT OF MEHADPUR CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

| | Strength. |
|---|---|
| Europeans ... | 8 |
| Natives ... ... | 337 |

Sickness and mortality.—The head-quarters and one-half Battalion of the 25th Regiment N. L. I. formed the Garrison of Mehadpur during the year 1873. The left half Battalion, which had been stationed here since the arrival of the corps, was relieved by the right from Augur in March. The health of the men was decidedly bad, and the amount of sickness considerably in excess of that which prevailed in 1872. The average strength of the Garrison was 337; the total number of admissions into hospital 1,435; the daily average of sick 44·29; the percentage of treated to strength, 430·26; the percentage of sick to strength, 13·14, and the percentage of admissions to strength 425·81. The mortality in hospital was inconsiderable; only two deaths having occurred. A young Maharatta recruit accidentally fell into a deep well in the lines, from which he was drawing water, and was taken out dead, having sustained fractures of the skull and thigh and other severe injuries. A wall was afterwards built round the place, as a guard against similar accidents in future.

The great amount of sickness during the past year was almost altogether due to the prevalence of fever; ague contributed seven hundred and thirteen to the total number of admissions into hospital. In the month of October one hundred and forty cases of ague were treated, and a few of these of the tertian type were of a very severe and well marked character. The medical officer had never seen such cases. Many were complicated with chest and bowel affections, and in one or two permanent enlargements of the spleen took place. Change to Augur was, in some cases, at once attended with the best results. No more conclusive evidence of the existence of some local cause at Mehadpur for malarial fever can be adduced, than the fact that some of the worst cases got well almost immediately on removal to Augur, which is

only about thirty miles distant and of the same description of climate. The lines are generally blamed for the fever, but I do not imagine that new ones would render the station throughly healthy; although, of course, they would much reduce the sickness. The ague I consider due to the following causes: the great amount of vegetation, wretched and badly drained lines, low site of camp, and the proximity of a large river, and the nature of the soil, which causes it to retain moisture.

Six cases of remittent fever were treated, and of these one proved fatal.

*Dengue.*—This disease appeared amongst the sepoys and their families in October, and continued until the end of the year, causing two hundred and twenty-three admissions into hospital. It presented all the symptoms described as peculiar to it, but differently developed in different cases. No European was attacked. The patients as a rule were suddenly attacked by fever and, a short time afterwards, by excrutiating pains in and about the joints and loins. Pains in the joints continued for a long time, and a few of the men are still under treatment for them. It prevailed in the town of Mehadpur to a great extent; and, on inquiry, I found that the Natives also suffered from it in September and October 1872. There were one hundred and twenty-three admissions into hospital from simple continued fever; and of these seventy occurred in April, and were supposed to be due to heat.

The general sanitary condition of cantonment and its vicinity was very good from the 1st January until the rains fell; then everything changed for the worse, and remained so until about the middle of November, when the autumnal sun of Central India had dried up the mud and vegetation left by them. No one visiting Mehadpur in the cold weather can form any idea from the appearance of the place then, what it is like in the rains. Vegetation springs up in cantonment and all around, which it would be almost impossible to keep thoroughly down without a large expenditure of money. Whether I am right in considering this vegetation a source of malaria (or whatever the cause of intermittent fever may be) or not, may be doubtful; but there is no doubt that it existed in September and October during the past two years. The closeness of the Native town, which is a large one, without any system of conservancy, and surrounded by prickly-pear hedges that have not been cut for years, is in a measure hurtful to the health of camp, particularly in September and October.

### Section II. (*a.*)—Drainage within the Cantonment.

Some better system of drainage for carrying off the surface water in the rains is urgently required, as far as the regimental lines are concerned.

### Section II. (*b.*)—Water Supply.

The water-supply is derived from the Supra river, and two wells, which are in all probability fed from it. The quantity seems fair, and no diseases have been attributed to it. In the rains the drinking water is obtained chiefly from the wells. One of them is situated in the mess compound, and is largely drawn on by the sepoys and their families as well as by the European inhabitants.

### Section II. (*c.*)—Accommodation for the Troops.

The lines have been several times reported on as quite unfit for Native Troops, and during the year under review their condition was as bad as usual. The hospital accommodation was deplorably insufficient for the number of sick during the year. There is no separate place for cases requiring isolation, except a small room which cannot be shut off from the main ward, without also shutting out a great amount of necessary light and ventilation. There are no quarters for medical subordinates or hospital servants in the compound; and, as a consequence, these people have to live in the lines. The erection of quarters has been sanctioned, but was delayed on account of the proposal made of removing the head-quarters to Augur. There is no dead-house, or place to carry out the *post mortem* investigations.

### Section II. (*d.*)—Conservancy.

The latrine accommodation is on the trench system carried out on a piece of ground, hedged in, about two hundred yards from the lines. The system does not answer well; and, without constant supervision, is likely to be harmfull. It is filthy in the rains and, if not closely looked after, in my opinion dangerous. The men and their families do not like using the place, and avoid it as much as they can. A sepoy is told off to see that they use the trench. Every endeavour is made to carry out the system in the best possible manner; the ground is ploughed up and brought under cultivation to the extent of 70 yards. Dry earth is used in the hospital latrine, and the urine received in dammered pans fitted for its reception in the rear. The system works very well.

### Section II. (*e.*)—Cleanliness of the Station.

None.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

None.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Vegetation kept down as much as possible. Estimates for new lines for 2 companies have been prepared and forwarded for sanction.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

In the new lines proposed to be built the houses are to be raised on a plinth, which will in a measure remedy the defect; but better drains are also very desirable; they could not, however, be made until the new lines are constructed.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (c.)—Unfitness of the Lines for Native Troops.*

The unsuitability of the climate of Mehadpur as a permanent station for Native Troops has already been reported; but, as it is considered desirable on political grounds to retain a detachment of Native Infantry there, the removal of all but 2 companies, and the construction of new lines on well raised plinths for a detachment of that strength, has been recommended; and although the question has been before the Government of India since May 1873, and early decision asked for, no reply has yet been received.

*Section II. (a.)—Better system of Drainage required.*

Orders have been issued for the surface drainage of the lines to be improved, as much as possible, by the Troops before the setting in of the monsoon.

---

## SANITARY REPORT OF MHOW CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The European Troops comprising the garrison of Mhow during the past year (1873) have been :—

E/C Royal Horse Artillery. Arrived at Mhow from England on the 6th of March 1873.

2/6 Royal Artillery. Arrived at Mhow from Colaba on the 27th of December 1872.

3rd Hussars (3 squadrons) arrived at Mhow on the 23rd of January 1873.

49th Regiment have been at Mhow the whole year.

The health of the Troops, with the exception of the batteries of artillery, has been better than during the preceding year (1872).

Malarious fever has been the prevailing disease during the year.

The following table will show the actual amount of sickness and mortality amongst the E/C Royal Horse Artillery, 2/6 Royal Artillery, and 3rd Hussars, together with the average strength of each :—

| Corps. | Average Strength. | Admitted. | Died. | Ratio of Admissions per 1,000 mean strength. | Ratio of Deaths per 1,000 of mean strength. | Average Daily Sick. |
|---|---|---|---|---|---|---|
| E/C Royal Horse Artillery ... ... ... | 168 | 338 | 3 | 2392·3 | 18·4 | 16·12 |
| 2/6 Royal Artillery ... | 74 | 157 | 5 | 2121·6 | 67·5 | 6·35 |
| 3rd Hussars ... ... | 310·08 | 401 | 2 | $1293\frac{17}{31}$ | $6\frac{14}{31}$ | 13·26 |

The very large proportion of sickness to strength in the E/C Royal Horse Artillery may be attributed to the following causes :—

1st.—The late date of the arrival of the battery in India with its subsequent march from Khundwa to Mhow at the end of February.

2nd.—The large number of young men in the battery between 20 and 24 years of age.

3rd.—Its somewhat severe duties on arrival at Mhow.

4th.—The presence of several men unfit from different causes for service in India.

Malarious fever has been the disease from which the E/C has chiefly suffered of the 3 deaths.

2 were from enteric fever.

1 was from remittent fever.

The 2/6 served, previous to their arrival at Mhow, at Aden for 2 years, and at Colaba for nearly 2 years. It has suffered a good deal during the past year from ague, dysentery, and diarrhœa, fever and general debility ; the consequence, no doubt, partly of its service at Aden, at which place it suffered much from the three first-named diseases.

The 5 deaths in 2/6 Royal Artillery were from—

| | |
|---|---|
| Abscess of Liver ... ... ... | 3 |
| Aneurism of Aorta ... ... ... | 1 |
| Bowel Complaint .. ... .. | 1 |

The 3rd Hussars has enjoyed the most conspicuous immunity from diseases of all kinds during the whole period of its service at Mhow.

The 49th Regiment having been at Mhow during the whole of 1872 as well as 1873, the following comparative statement will show its sickness and mortality in both years :—

| 49th Regiment. | Average Strength. | Admitted. | Died. | Ratio of Admissions per 1,000 of mean strength. | Ratio of Deaths per 1,000 of mean strength. | Average Daily sick. |
|---|---|---|---|---|---|---|
| 1872... ... ... ... | 667·5 | 1057 | 10 | 1587·70 | 14·97 | 47·6 |
| 1873... ... ... ... | 804·5 | 810 | 9 | 1012·5 | 11·2 | 48·00 |

From this table it will be seen that the regiment has been very much more healthy during the year now under report than in 1872.

The Native portion of the garrison of Mhow consists of the 10th and 16th Regiments N.I. The health of both these corps has been good during the past year.

The average strength of the 10th Regiment N.I. was 499 ; the mean daily sick 24·3 ; admissions 835. The chief cause of admission was fever, of which 528 cases were admitted, being 63 less than in the previous year.

The average strength of the 16th Regiment N.I. was 691 ; the mean daily sick 23·2 ; admissions 835, being 82 less than last year. The chief admissions were from fever.

Small-pox broke out in the Sudder Bazar on the 28th January 1873. Immediate measures were taken for the isolation of the sick, and a small-pox camp was pitched on the out-skirts of the bazaar on the east side, near the site of the cholera hospital of 1872.

| | |
|---|---|
| Number of cases treated ... ... ... ... | 123 |
| Number of deaths ... .. .. .. .. | 14 |

The last case was discharged on May 1873, and the hospital closed on the 14th June.

Dengue fever commenced in the bazar in a sporadic form in September, but at no time assumed an epidemic form.

I do not consider the past year to have been a very healthy one as regards the Native community. There was much sickness, principally malarious fever and rheumatism, during the months of September, October, and November, caused perhaps in no slight degree by the larger portion of the monsoon rain having fallen late after cocoanut-day, the 8th August.

### Section II. (*a.*)—Drainage within the Cantonment.

The drainage in cantonment is surface drainage.

The bazar drainage is being carefully looked into, and an estimate will very shortly be submitted for very considerably improving it. Much has been done for free ventilation by opening up streets and widening many places.

There are no jheels or marshes in the cantonment or in its vicinity.

### Section II. (*b.*)—Water Supply.

The water-supply of Mhow is not good, and never will be, until a regular scheme of water-supply has been matured and carried out.

The present supply from wells is barely sufficient after a good monsoon. The supply for ablutionary purposes is necessarily very limited in barracks, quite insufficient for health or comfort.

During the past year some new wells have been sunk, and existing ones deepened and cleaned out.

The water is good, and is drawn from wells in the usual manner.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

*European Troops.*—The Infantry Regiment has a company stationed at Indore. The accommodation for the head-quarters of the Regiment is good. The necessity for completing one of the new Infantry barracks, the building of which has been in abeyance for some time, is now under consideration.

The Horse Artillery Battery occupy bomb-proof barracks chuppered over. The accommodation is good and ample.

The 2/6th Royal Artillery have during the past year occupied one of the new Cavalry barracks, and men well housed. On the arrival of the Squadron of 3rd Hussars from Ahmadnagar in February next, the battery will have to vacate this barrack and occupy their old quarters in the two thatched barracks near the Staff hospital. These barracks have been paved during the past year.

The Cavalry occupy the two old and the new Cavalry barracks. They are good, and the accommodation sufficient.

The married quarters of all the corps is generally good. New cook-houses are being constructed to the married quarters of the Cavalry, and will shortly be ready.

The hospital accommodation for the Cavalry Regiment is very good and ample. They require a separate female ward, and the subject is under reference.

There is one hospital for the Infantry Regiment and the two Batteries. The accommodation in ordinary times is sufficient, but in times of unusual sickness it is crowded. A contagious disease hospital has been sanctioned, and will shortly be commenced, on a site to the south of present Infantry hospital.

*Native Infantry.*—The lines of the Native Infantry are at the north end of cantonment and are fair.

At present there is only one hospital for both the Native Infantry Regiments, but another hospital with out-houses is being built and will shortly be ready.

*Staff Hospital.*—This building is still in existence close to or, indeed, part the quarters which will be occupied by the 2/6 Royal Artillery. I am trying to get it removed to another excellent site I have selected, as I consider its present position very bad and objectionable in every respect. There is no accommodation for Europeans in the Staff hospital.

SECTION II.—(*d.*) CONSERVANCY.

*European Troops.*—All the latrines and urinals are on the standard plans, and the dry-earth system in use, which work well. The receptacles are carted away, and the contents deposited in trenches, a layer of earth being placed therein daily.

*Native Troops and Followers.*—The trench latrine system has been used during the past year, (with the exception of during the monsoon when the masonry latrines were used by the Troops,) and has found to answer well.

The manure from the several manure yards is purchased by the cultivators for tope dressing.

SECTION II.—(*e.*) CLEANLINESS OF THE STATION.

There is no want of cleanliness in the station generally.

A proper supervision is extended over regimental bazars and private compounds.

Great progress has lately been made in the general appearance of the cantonment, by improving the fences round compounds.

SECTION II.—(*f.*) QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations have been good, and the quantity sufficient for the maintenance of a good standard of health. The cooking is also as much varied as possible.

SECTION II.—(*g.*) OTHER DEFECTS.

The water-supply of Mhow is most defective, and in the hot weather, especially after a bad monsoon in previous year, is very limited. This is a subject however now under consideration.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The bazar has, during the past year, been much improved. Two fine new streets have been marked out; and building along their sides is going on.

Many houses also, which obstructed ventilation, have been removed. Much has been done, and more will yet be done to improve ventilation.

Levels are being taken, and an estimate being prepared for a new system of drainage throughout the bazar ; and will, I hope, shortly be commenced.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

Paved masonry platforms should be constructed round all the wells in Sudder Bazar.

A great many of these wells have been completed during past year, and in time all will be provided with platforms and pulleys.

---

## SANITARY REPORT OF NASIRABAD CANTONMENT FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the British Troops at this station has been most satisfactory for the past year. There were 906 admissions into hospital, out of an average strength of 584, for all diseases.

There were 7 deaths.

The diseases which caused the greatest amount of non-effectiveness were, in the early part of the year ague, and in the latter venereal. With reference to the former disease, the medical authorities set forth defective drainage, and the existence of numerous irrigation tanks around the cantonment as the chief exciting causes.

Native Troops.—With the exception of the months of September, October, and November, the health of the Troops has been good ; during the 3 months above mentioned fever was prevalent, but not to the same extent as last year. Only 783 cases were admitted from the Infantry from fever, out of an average strength of 616, and 67 from the Cavalry, average strength 110.

Only 2 deaths occurred from fever.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

There is no defect in the drainage within the cantonment : surface drains are cut as required, to carry off such water as lodges after heavy falls of rain.

To obviate the injurious influence supposed to be caused by the drying up of the outside jheels alluded to in previous section, the closing of all barrack doors and windows on the windward side is supposed to have been attended with success.

SECTION II. (*b.*)—WATER SUPPLY.

The water-supply, whether for potable or other purposes, is both deficient in quantity and inferior in quality. Save in some few old tanks, chiefly used by Natives, there is no potable water whatever within cantonment limits. There are about 200 wells in the cantonment, not one of which contains water considered by chemists fit for drinking water.

The entire supply of drinking water for the garrison is derived from a single well about 2 miles distant from the nearest European barrack. The water thus obtained is of fair quality ; but the situation of the well, in the immediate vicinity of a village and by the side of a main road, renders this sole source of supply (in the opinion of the Principal Medical Officer, British Troops) highly dangerous. During the prevalence of epidemic cholera casual pollution of this well, to which, by its situation, it is very much exposed, might determine a most virulent outbreak of cholera amongst the entire garrison at any time when that disease happened to prevail in the neighbourhood.

The water is brought in by puckalees and in casks on carts.

The same water is supplied to the Native Infantry, brought in by camel puckalees, who empty their loads into filter carts, which are stationed in the lines, from which the sepoys draw for drinking purpose.

The Principal Medical Officer, British Troops, considers that the practice of Natives drawing water from this well by means of their own vessels is likely to prove a serious source of further contamination ; and this is thought to be likely enough ; but, when it is considered that the villagers have the free use of the water for irrigating their fields and for supply of their necessities, for which purpose they must, of necessity, use their own moats and appliances, it is thought that nothing can be done to remedy this defect until the cantonment is provided with a water-supply under their own entire control and from a properly constructed reservoir at the base of some of the neighbouring hills.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

This matter is under consideration by order of the Government of India. It is not yet decided what, if any, defects in the nature of the accommodation for European Troops exist.

The Native Troops are fully provided for according to regulation.

SECTION II. (*d.*)—CONSERVANCY.

There are no defects in the condition of the latrines and urinaries provided for the Troops.

The system for the European soldiers is the dry earth; all solid refuse is removed to manure yards. Urine is removed by hallalcore bhistees.

For the Native Troops trench latrines are provided; except for the hospitals, where it is not practicable.

For the Native population trench latrines, where ground is available, are used; for the rest the usual form of Native latrines, which are carefully looked after and as free from impurity as is possible.

No part of the cantonment, which is manured with sewage, can be permanently cultivated, on account of the absence of water, but rain crops will be sown on land so manured during the ensuing rainy season.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station generally, including Native bazars and private compounds, is as clean as can be.

In each private compound properly-formed privies are provided for the servants, and ordure removed morning and evening. Dry rubbish is removed by a separate establishment.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

There is no inferiority in the quality of the rations supplied to the Troops at this station.

The Officer in Medical Charge of the European troops considers, however, that the bread is not equal to what is obtained by private residents.

SECTION II. (*g.*)—OTHER DEFECTS.

The main defect at this station is the absence of good water in sufficient quantity for drinking purpose, and its almost entire absence for garden purposes and arboriculture.

By the absence of water the dhobies are compelled to take all clothes for the wash to considerable distances, and during the hot season it is well known that pools outside cantonment limits, which are not fit for the purpose, are of necessity used; this, of course, would be entirely obviated if the water scheme now under consideration and alluded to in Section II., is sanctioned.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Digging of wells for cultivation, planting of trees, and giving every encouragement to Natives to cultivate gardens for the provision of a more plentiful supply of vegetables.

The scheme alluded to in last year's report for the planting of the west front of the cantonment has been commenced, and a considerable tract of ground enclosed and planted by the Forest Department.

Another valuable measure is the sanctioned transfer of the present Commissariat garden from the east to the west side of cantonment; this will be commenced after the conclusion of the present hot season, and is expected to yield a good return, both in the improvement of the rations and as a pleasant place of resort for the Troops.

The surface drainage of the cantonment has been considerably improved and extended during the past year.

The reservoirs in the private barrack ablution rooms, hitherto not used, owing to the impossibility of filling them by means of the regimental bhistees, are now about to be filled from wells by means of underground pipes; this will remedy a great want.

The new harness rooms for Royal Artillery are now finished and handed over.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

As regards (*a*) and (*g*) all is dependent on whether the Government of India sanctions the reservoir in the neighbouring hills.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (b. & g.)— and Section IV.—* } *Defective Water Supply.*

The water-supply of Nasirabad has, for a long time past, been under consideration. A scheme to improve the same by bunding the neighbouring hills is at present before the Government of India. In 1872 the Government of India sanctioned the provision of a tank

at a cost of Rs. 15,647 for the storage of water from the roofs of the barracks, as an experimental measure. No information has been received as to whether the experiment is likely to prove successful.

## SANITARY REPORT OF NIMACH FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

*In Her Majesty's 59th Foot*

there were (in a strength of 297)

| | |
|---|---|
| Total admissions ... ... | 589 |
| viz., Fevers ... ... ... | 349 |
| Venereal ... ... ... | 54 |
| Other diseases ... | 186 |
| Total... | 589 |

2 deaths (Liver Complaint.)

*N. B.*—The Regiment was aguish and unhealthy for some years past.

*D./18th Battery R. A.*

| | |
|---|---|
| Average strength... ... ... | 142 |
| Admissions to Hospital ... | 302 |
| viz., Venereal ... ... ... ... | 40 |
| Fevers ... ... ... ... ... | 124 |
| Other diseases ... ... ... | 138 |
| Total... | 302 |

Five deaths from tropical diseases, one from drowning, and one from delirium tremens; total deaths 7.

The above tables show that fever cases were nearly double this year in H. M.'s 59th Regiment, during the three fever months, September, October, November (when they left).

| 1872 | | 1873 | |
|---|---|---|---|
| Fevers ... ... ... ... ... | 134 | Fevers... ... ... ... ... | 212 |

and that they were one-third more this year in the R. A.

| 1872 | | 1873 | |
|---|---|---|---|
| Fevers ... ... ... ... ... | 78 | Fevers... ... ... ... ... | 124 |

This year the tank had been restored; but, as it was of a *more* marshy, muddy appearance last year, during these very months, it is impossible as yet to give a decided opinion as to the tank being the cause of the increase.

The Artillery, also, is nearly 2 miles *from* the tank, and the Natives, who are *nearer* to the tank, suffered collectively less from fever than last year, and about the average from all other diseases (but 15 cases above last year occurred—chiefly from scorbutic rheumatism).

Do. do. 6·09 (1873)

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

In the military lines the drainage is good. In the bazar the natural water courses required clearing out. Some open drains, by the roadside, had been encroached upon and covered up by the house-owners.

The earth latrines were at one time too near the small river (reported by me).

Public urinals badly situated.

Northward of the tank, lately restored, there is a chain of pools, which, although they have an *over*-flow *into* the tank *during* the rains, still flow back and away from it, to a black soil basin (in consequence of rocky barriers in their channel), *after* the rains have ceased.

Water percolates through the bund; and the *nullah* which leads from it (W. of barracks), remains stagnant in parts of its black soil bed; as also does one to the N.E. which flows, however, much more freely. The upper half of the tank, although it looks swampy, is hard enough to cross on horseback; will probably be covered with water next season. The bund, of course, is not yet hardened and set. Less percolation will occur next year. There is a large tank and rice-fields to N.E. (*fever wind*); they are in foreign territory, and are decidedly unfavourably situated.

SECTION II. (*b.*)—WATER SUPPLY.

Perhaps the only advantage in the restoration of the bund and tank is, that the water-supply will not probably be deficient this year in May and June. It, the water, is drawn from wells, which are not apparently open to contamination. According to the rough test of the permanganate of potash and the microscope, the water in the wells is fairly good.

The ground used for earth latrines seemed to me once rather too close to the small river. I reported this.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

There is apparently abundant barrack accommodation. Guard-houses and other out-buildings have had their floors raised, and have been improved generally; more is being done.* In the Native Cavalry there is a closed court-yard to every hut, which is used for natural purposes. The women, therefore, who are all of high social status in native society, *do* not and *may* not frequent the public latrines. They pay sweepers to remove the excreta.

SECTION II. (*d.*)—CONSERVANCY.

In the Native Cavalry, as stated above, every hut has a closed court-yard, which is used by the higher classes of women and children for purposes of nature.

Paid sweepers carry the excreta (generally disinfected with ashes) and throw them down behind the latrines.

As the conservancy is partly paid for by the regiment, I have had 4 extra iron receptacles made to receive these house scavengings. The regiment is exceptionally healthy. The latrines wanted paving. This was done. Three urinals were in objectionable situations in the bazar.

There is some difficulty in getting the sweepers to throw dry earth into the trenches of the dry conservancy latrines, which otherwise are successful.

Sweepers are generally not numerous enough in cantonment and bazar.

The land manured and cultivated 14 beegas.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

1st. All cases of neglect have been reported generally (and rectified), but there is remissness in doing this—that is, reporting to the officers in charge of sections, by people who verbally are loud in their general strictures.

2nd. Encroachments (by the covering of the open gutters in front of houses) have been removed.

3rd. The urinals were badly situated (removed now.)

4th. Some drains required repair.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

From H. M.'s 59th, the report is "good and plentiful."

At the suggestion of the Officer Commanding the station perforated tin meat-safe carts were, it appears, provided for transporting the rations, as flies infested the meat. I consider the suggestion, by the light of the modern etiologies of disease, to be a most valuable one.

SECTION II. (*g.*)—OTHER DEFECTS.

The medical authorities of the 59th Foot, I believe, complain that the tank is not deep enough, and that masonry should form the "bund" and be employed almost over its whole area. Clearly the *revêtement* of the bund and tank with solid masonry would be an expense not counterbalanced by the corresponding advantages of retaining the tank. It is to be particularly remembered that in 1872, before the bund was restored, there was water in the tank up to April 1873 (*I* maintain even *May*), and that, during the fever months, September, October, November, December, its basin was more *marshy, foul,* and apparently *dangerous* than at present, with the bund restored (and not yet "*set*"). As the barracks are on a rocky eminence, there is probably little rise in the underground water level. No record of the level in the wells (formerly) could be obtained by me. The wind also during fever months never blows over barracks from the direction of the tank. The Artillery, which is about 2 miles farther from the tank than the 59th Foot, has suffered almost equally with fever. A large tank and rice-fields at Kunowtee, N.E. of barracks and in foreign territory, are much to be deplored [as above stated Section II (*a.*)].

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

1. Uncovering of encroachments upon open drains.
2. Removal of those urinals which were in objectionable sites (near meat market, &c.)
3. Building of four others in better situations.
4. An increased tax levied for conservancy.
5. On N.W. the large tank was "*bunded.*" It is quite uncertain whether the result has not been injurious to the Troops, as fever has nearly doubled in frequency in two of the Corps (Europeans).
6. Improved drainage, both below and above the tank, has been urged by me from the beginning, and is being gradually carried out.
7. The protection of the young trees by mud walls or other fencing has been ordered.
8. A large uncovered drain, which was complained of, was uncovered, thoroughly cleaned out, and a central "man-hole" was built, large enough to enable this to be done periodically.

The outlet of this drain extended into the meat bazar. On my suggestion (and at the earnest request of the butchers) this it has at last been decided to cover in, to save the meat from pollution by gases, flies, &c., leaving it sufficiently large for a man to go up and clean it.

9. I need not mention that, by a strict quarantine, maintained between the cantonment and Nimach town, &c., we completely stamped out the small-pox with which we were attacked. The few cases we had were carefully treated in straw huts, well away from camp.
10. An improved pattern of foot-platforms was ordered to be placed over the earth latrine trenches, and the system of close moveable screens, superseded by one fixed single one, at a few paces off, thereby greatly improving the ventilation.

These suggestions were urged by me on seeing the extremely filthy state of the male earth latrines.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

Repeated suggestions for the better drainage of the water accumulated above and percolated through the bund, and to N. E. of camp, in *another* river, have been made by me, and are being gradually carried out. The vast importance of this and other drainage, (viz., the two large nullahs to have their beds cleared,) will be seen in the large *increase* (nearly double) of fever cases this year. On more efficient drainage the existence of the bund must rest. For if, after a trial of some seasons, the same high ratio of fever remains, it will evidently be necessary to try the effect, not only of the removal of the bund, but of the efficient drainage of its site.

(*a*). An increased number of receptacles for the removal of the excreta (brought from the huts of the Cavalry) has been inaugurated. [See Section II. (*d.*)]

The regiment is, nevertheless, exceptionally healthy. The number of receptacles and of sweepers will, I believe, have to be still further increased. I would repeat the necessity of all officers or others reporting any nuisance at once to the Officer of Conservancy Sections, in *writing*. I have recommended severer measures against the bazar sweepers, &c., to punish negligence and laziness on their part.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

With reference to the remarks regarding the tank lately restored as an experiment at the earnest solicitation of the station authorities, and with the sanction of the Sanitary Commissioner, the Quarter Master General is desired to add that the opinions as to its prejudicial effect on the health of the men are so conflicting, that the Commander-in-Chief, who inquired into the matter on the spot when lately at Nimach, has determined to give it another year's trial, and has directed that care be taken to level the bottom of the tank and fill up the holes in the bed of the nullah running from it.

---

## SANITARY REPORT OF POONA CANTONMENT FOR 1873.

### SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The 2-7th, 56th, 68th, and 83rd Regiments and Detachments formed the garrison of European Troops at this station during the year, with a short interval of absence at the Camp of Exercise. The 2-7th Regiment arrived recently in the country.

The health of the European Troops during the past year may be pronounced most satisfactory, and the Troops enjoyed a complete freedom from epidemic diseases.

Fevers and bowel complaints prevailed to an appreciable extent, attributable generally to climatic influences. Venereal figured itself also among the prevailing affections, and the 56th Regiment suffered from it the most of all other corps.

The mortality was small in comparison to the admissions, and the chief causes of death were fevers, bowel complaints, sunstroke, diseases of liver, and consumption.

The health of the European families was generally good.

The health of the Native Troops was on the whole good, and the mortality inconsiderable. The following table shows the sickness and mortality of the different regiments :—

| | 1st Light Cavalry, 448. | 1st Grenadier Regiment, 705. | 8th Regiment N. I., 650. | 17th Regiment N. I., 499. | Staff and Details, 992. |
|---|---|---|---|---|---|
| Average daily sick ... ... | 23·6 | 19·1 | 24·9 | 13·2 | 20·4 |
| Percentage of average daily sick to strength ... ... ... | 5·9 | 2·7 | 3·8 | 2·7 | 2·1 |
| Percentage of treated to strength ... | 108·9 | 96·3 | 135·7 | 134·5 | 57· |
| Percentage of deaths to strength ... | 0·89 | 0·56 | 0·2 | 0·2 | 0·1 |

The health of the civil population, both European and Native, has been very good during the year. There has been no epidemic whatever amongst them ; there were 363 deaths during the year from all causes.

### SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The want of sewage drains in the Sudder Bazar greatly interferes with its proper sanitation, and the urgency of these has repeatedly been brought to the notice of Government for a long time past; but no provision has up to this time been made by Government to remove this prolific source of disease from this most extensive and densely populated cantonment, the first and most important in this Presidency. But the Committee have very great satisfaction in recording, that during the past year the Cantonment Magistrate has constructed several pucca built drains in the localities they were most needed, in the bazars more particularly, for the discharge of storm waters, at a very considerable outlay, by voluntary contributions :—

The works are still in progress, but the following will give an idea of the extent of the work already done:—

| | |
|---|---|
| Double drain.<br>730′ × 2′ × 3′<br>Single drain.<br>1,125′ × 2′ × 3′<br>Single drain.<br>280′ × 2′ × 2′ 6″<br>Single drain.<br>4,000′ × 1′ × 1′ | Single drain.<br>700′ × 2′ × 2′<br>Single drain.<br>950′ × 2′ × 1′ 6″<br>Single drain.<br>820′ × 1′ 6″ × 1′ 6″ |

The Cantonment Magistrate, in constructing the drains, took advantage in filling up deep hollows and providing pucca roads in several gullies. The work, although carried out by the Cantonment Magistrate, was frequently visited by the Executive Engineer, who expressed himself quite satisfied with the quality of the work and the manner in which the same was executed.

The Committee are decidedly of opinion that these works have not only improved the sanitary condition of the several portions of the bazar, but have considerably added to the appearance of the place and the comfort of the residents; for some of these portions previously were quite inaccessible during the monsoons.

The Committee will do itself the honour of submitting a final report on the completion of all the works, showing the estimated value and the actual expenditure; and would also bring to notice the services of Mr. Gungaram Bhow (Sheristadar) for special recognition, for assisting the Cantonment Magistrate in designing and carrying out these works in so satisfactory a manner, personal inconvenience to himself, and in addition to other duties as a Sheristadar of the Court.

The latrines of the 1st Grenadier N. I. are too near the lines and wells, and those of the 17th N. I. are too directly to windward of the lines.

There are no jheels or marshes in the station or its vicinity.

### Section II. (*b.*)—Water Supply.

Water-supply satisfactory as to quantity and purity. Filtration by sand and charcoal in general use for European Troops.

The opening of the Khurruckwasla canal has certainly given an additional supply of water, and the work of laying pipes for distribution of this most necessary element of life to the different parts of the station is being pushed on with great rapidity and energy by Mr. Whiting, C.E., the Engineer for Irrigation.

The system of dipping wells is considered objectionable, and the Committee strongly recommend the necessity of erecting stands in the different parts of the cantonment with cocks to ensure a purer supply of water.

### Section II. (*c.*)—Accommodation for the Troops.

Barrack and hospital accommodation for the European and Native Troops ample and good.

It is reported that the lines of Her Majesty's 8th Regiment N. I. are in a very bad condition, and that they are to be dismantled and removed from their present locality.

In the lines of the 1st Light Cavalry ventilation is considered insufficient.

### Section II. (*d.*)—Conservancy.

The existing condition of the latrines for Native Troops is very defective, and urgently demands the attention of the authorities.

The Committee brought this faulty system of latrines prominently to notice in their last year's annual report.

The Committee believe it is in contemplation to erect new lines for Her Majesty's 8th Regiment N. I. in the same locality, and on the immediate flank of the existing Native Infantry lines situated near the race-course. The question of latrine conservancy is so closely allied to that of the position the lines occupy in a station, that it seems indispensable to decide in the first instance the system to be adopted for carrying out the former: whether in fact the existing arrangement of latrines is to be continued, or the more generally approved one of trenches adopted in its place, or again the flushing system recommended by Dr. McKinnon can be satisfactorily introduced in connection with a sewage farm. The first system of existing latrines has been found (and often reported) to work very inefficiently, and this must necessarily be the case as long as the small establishment of one cart and eight sweepers is only available to do the conservancy work of a whole regiment and its followers.

The 2nd system of trench latrine is generally approved of, and is said to be found to be successful in Bengal; a necessary condition, however, is that there must be suitable ground in the vicinity of the lines for its operation, which is not obtainable in the locality in which the present lines are situated.

The 3rd system of water latrines might be well adopted for the special circumstances of the Native Infantry lines as at present situated, were it not for the difficulty of selecting a suitable position for the sewage farm, which, when practised on an extensive scale, might injuriously affect the health of the residents in the immediate neighbourhood, more particularly of the occupants of the Native Cavalry lines, to which its situation would bear a direct westerly aspect. These considerations show that it is difficult, if not impossible, to deal satisfactorily with the question of latrine conservancy for Native Troops, as long as the lines occupy their present position in the centre of the station, and the desirability when new lines are required (as in the present instance of the 8th Regiment N. I.) to select some new ground altogether for the purpose. The ridge which runs north and south behind the Ghorpoorie European lines, parallel with the Byroba's Nullah, has been mentioned as an eligible position for new Native Infantry lines, and is doubtless the best which could be selected; the ground would have to be purchased for military requirements; but, as a set-off to this expenditure, the station garden and another piece of Government land extending along the nullah bank to the south of the Roman Catholic Chapel, might be sold, as not required for cantonment purposes. The new locality would thus, it will be seen, be well removed to the leeward of camp, and, besides occupying a fine elevated position, would admit of any system of conservancy thought most desirable being carried out without difficulty.

No land is at present cultivated by means of sewage manure within cantonment limits.

### Section II. (*e.*)—Cleanliness of the Station.

The station and bazars throughout have been kept in as clean a state as possible.

### Section II. (*f.*)—Quality of Rations supplied to the Troops.

There was no inferiority in the quality of rations supplied by the Commissariat Department to the Troops.

The market price of the food for the population has greatly fallen in the latter part of the year.

### Section II. (*g.*)—Other Defects.

The want of public latrines for the use of poorer classes of people is much felt.

An application has been made to Government to sanction fifty thousand rupees per annum from the Abkarie revenue, for all sanitary improvements in the cantonment and bazars.

The roads throughout the cantonment and bazars require to be lighted.

The beef-market, in its present place, is a source of great nuisance, and the Committee strongly urge the necessity of its removal to a more convenient locality; and with that object suggest that the present buildings with the ground be sold, and a new market built elsewhere: a very good and convenient site is available for this purpose.

It has been strongly recommended to have the present mutton slaughter-yard removed to a more suitable locality.

### Section III.—Measures adopted to improve the Sanitary Condition of the Station.

Streets have been made in some of the bye-lanes and gullies of the Sudder Bazar.

Drains have also been constructed in some of the back lanes and gullies of the Sudder Bazar, wherever essentially necessary.

The open space near the reservoir in front of the Cantonment Magistrate's Office is being filled up and levelled.

Most of the houses and compounds were lime-washed. New trees alongside of streets have been planted.

Public latrines for the use of the Ghorpoorie Bazar inhabitants have been sanctioned.

### Section IV.—Suggestions for remedying any of the Defects still existing under the several heads (*a.*—*g.*) already given in Section II.

The mutton slaughter-yard should be removed.

Public latrines for the poorer classes of people are required to be built.

The beef-market should be removed from its present locality.

The roads require to be lighted and watered.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

To carry out the several improvements recommended in this Report, it is necessary that Government should legalize measures for raising local taxes, or grant a portion of the Abkary revenue, Rs. 50,000 of which annually has been applied for. A scheme for raising funds by taxation has been before Government since 1868, and although decision on the same has repeatedly been urged, no orders have yet been received on the subject.

The condition of the Native Infantry latrines has already received attention, and remedial measures will be adopted as soon as practicable.

---

## SANITARY REPORT OF PURANDHAR CANTONMENT FOR 1873.

### SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

With the exception of a few Non-Commissioned Officers and men attending the Army Signalling School, the Troops quartered during the year were invalids.

The whole of the invalids during their stay on the hill made progress; the time allowed was insufficient to enable them to rejoin their Regiment completely recovered in health.

These men suffered principally from fever and debility caused by residence in the plains.

### SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

From the situation of the Barracks, Hospital, and Private Bungalows on the natural declivity of the hill, and from the rocky nature of the soil, the drainage within cantonment may be said to be excellent in every respect.

### SECTION II. (*b.*)—WATER SUPPLY.

Water for drinking and culinary purposes is obtained from two wells known as Nos. 1 and 2, situated near the Hospital; and in ordinary years, and with careful supervision, is generally sufficient for the requirements of this sanitarium.

Abundance of good drinking water can be obtained from the upper fort, in case of scarcity in cantonment, which very seldom happens. From a careful analysis, the water in these wells has been found to be of good quality.

### SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The accommodation for the Troops is in every respect satisfactory, and there is no overcrowding either in barracks or hospital.

### SECTION II. (*d.*)—CONSERVANCY.

1. The latrines are conducted on the dry-earth principle, and are very satisfactory and devoid of smell.

2. There is no latrine proper for No. 1 barrack, and the men residing in it make use of the latrine immediately behind No. 2 block. In a sanitary point of view, this is too far off for invalids to use during the cold night or the heat of the day.

3. The practice of carrying the human excreta in open vessels on the heads of coolies is very objectionable, as lazy servants (from private bungalows especially) are apt to deposit their loads wherever it suits their convenience.

### SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station is in a most satisfactory state as regards cleanliness, and every care is taken to keep the bazar in the same state.

### SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations throughout the year have been of fair average quality.

The Commissariat Porter has been good.

### SECTION II. (*g.*)—OTHER DEFECTS.

1. A small room just large enough to hold 4 half-porter casks is the only bathing accommodation. This on sanitary grounds is totally insufficient.

2. There is no bathroom or latrine for the Hospital Serjeant's quarters.

3. There is no hospital for the treatment of the Native population, a most serious defect in a sanitary point of view; and, in the event of any serious outbreak, might be of a very serious nature.

4. No dwelling-houses for the Natives employed in barracks.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

1. Two good Native latrines have been constructed: one for males, the other for females.
2. Quarters for the Quarter Master Serjeant have been nearly completed.
3. A storeroom is in progress.
4. Three good urinals have been built, one for each barrack.
5. Flues of the cook-houses improved.
6. Nos. 1, 2, and 8 wells covered in.
7. Bazar well commenced.
8. Drainage of the patcherries greatly improved.
9. A dead-house added to the hospital.
10. Hospital servants' houses much improved.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

1. A filth cart for the removal of excreta from barrack, patcherry, and private latrines is much needed. (*Vide* Section II., paragraph 3, page 13.)

2. A latrine for the use of No. 1 barrack. (*Vide* Section II., paragraph 2, page 13.)

3. A latrine and bathroom for the Hospital Serjeant's quarters. (*Vide* Section II., paragraph 2, page 19.)

4. Bathroom accommodation is required for at least 150 men. (*Vide* paragraph 1, Section II., page 13.)

5. A hospital for the treatment of the Native population. (*Vide* Section II., paragraph 3, page 13.)

6. Dwelling-houses for the cook and sweepers ought to be built. (*Vide* Section II., paragraph 4, page 19.)

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (d.)—Section IV. Latrine for No. 1 Barrack required.*

This want was noticed in last year's report, and on further inquiry it transpired that the latrine was not absolutely necessary. The following report on the subject was made to Government on the 28th January 1874 :—

"The General Officer Commanding P. D. A. does not consider the provision of a latrine for No. 1 barrack to be a work of emergency, as the latrine belonging to No. 2 barrack is only 50 yards from the former; and men in a very low state of health, who alone would feel any inconvenience from the distance to the latrine, are always accommodated in the barrack adjoining the hospital, where every convenience is provided for them.

("The Major-General also adds that the erection of a latrine on the site suggested would be attended with considerable expense, as the ground is beyond Military limits.")

*Section II. (d).—Present practice of conveying night-soil objectionable.*

*Section IV. A filth cart for the removal of excreta much needed.*

This also is a repetition of last year's remarks. On a report being called for with reference to the defects noticed in the Sanitary Report for 1872, it was stated that "a filth cart could not be made useful, as, from the situation of most of the latrines on the hill, it could not have access to them;" and in lieu of a cart one additional bildar was asked for and sanctioned by Government Resolution, Military Department, No. 4919, dated 13th December 1873.

*Section II. (g.)—Bathing accommodation insufficient.*

*Section IV. Bathroom accommodation is required for at least 150 men.*

Plans and estimates, the latter amounting to Rupees 19,998, for providing new lavatories with fittings for the hospital and barracks at Purandhar, were submitted to Government in 1872, to which Government in the Public Works Department replied that funds could not be made available for this work in 1873-74; and that it must therefore be deferred. It is intended to re-submit the estimates after the expiration of the current financial year.

*Section II. (g.)—Section IV. Bathroom and Latrine for Hospital Serjeant's Quarters required.*

It was reported to Government in October last that "although inconvenience is experienced by the occupants of the quarters alluded to, from the want of a latrine and bathroom, yet the Medical Officer in charge does not consider the work emergent."

The General Officer Commanding P. D. A. has been directed to furnish estimates for supplying the necessary accommodation early next year.

*Section II. (g.)—Section IV. A Hospital for the treatment of the Native population required.*

This is not a recognized Military building ; and it rests with Government to say whether it should be provided." (Quarter Master General's Report No. $\frac{15-36}{51\ \ 39}$ dated 15th October 1873.)

*Section II. (g.)—Section IV. Dwelling-houses for Cooks and Sweepers required.*

Government sanctioned Rs. 500 per cent. for the construction of quarters for the followers in question in January 1873, but it has since been reported that a much more substantial description of building than could be erected for that amount is necessary to stand the weather at Purandhar ; and an estimate amounting to Rs. 2,387 was submitted to the Government of India for sanction. The quarters are to be constructed when funds are available.

---

## SANITARY REPORT OF RAJKOT CANTONMENT FOR 1873.

### Section I.—Health of the Corps forming the Garrison.

The general health of the Troops has been satisfactory. In August, September, and October fevers prevailed to a considerable extent, principally of the intermittent form. The average daily sick per mille of strength has been 30·17, as compared with 26·12 in 1871 and 22·32 in 1872. This increase over the two former years may be accounted for in a great measure by the Head Quarter Wing of H. M.'s 7th Regiment N. I. bringing with them from Dharwar the germs of a disease which was most prevalent at that station, namely guinea-worm, which, in an average strength of 193, gave 52 admissions. The same corps also suffered considerably from intermittent fever ; this, no doubt, arose from the exposure and continuous hard work the men had to undergo in building their new lines. The admissions from this cause were 100.

The left wing of H. M.'s 18th Regiment N. I. and the 2nd Company Native Artillery left this in November last, leaving their sick behind them, which also assisted in making the "average daily sick" per strength higher. Four deaths occurred during the year. One from asthma in the month of January, one in March from effusion into the pericardium, one in May from pneumonia, and one in November from compression of the brain.

The health of the European Officers and their families has been fair. There are no European Troops at Rajkot.

### Section II. (a.)—Drainage within the Cantonment.

There are no jheels or marshes in the station or in its vicinity. The drainage of the station cantonment is good and in no way prejudicial to health.

The conservancy arrangements are good and give every satisfaction.

### Section II. (b.)—Water Supply.

The water-supply is obtained principally from wells close to the lines. The water is excellent, and for a great portion of the year abundant. The principal wells are protected by good substantial copings, which prevent any contamination from surface drainage. There is a large river in the vicinity, which can be made use of in case of necessity.

### Section II. (c.)—Accommodation for the Troops.

The lines of the 18th N.I. have been finished, as well as the greater part of the new lines for the 7th Regiment N.I. for two companies and head quarters. These lines have been built on the site of the old 18th N. I. lines and consist of 8 sections and 4 Native Officers' houses, but are smaller than the standard plan for Native Infantry lines.

There has been no change in the Artillery Lines since the last report ; they are in the sick horse stables and old post gun lines ; the latter are in a very bad state, and were condemned 5 years ago. The men altogether are a good deal crowded when the company is at its full strength. It is, however, in contemplation to build new lines for the Artillery.

The Drivers Guzerat Mountain Train have good lines and ample accommodation.

The hospitals answer all purposes, and there is no overcrowding ; they are well situated and airy.

SECTION II. (*d.*)—CONSERVANCY.

There are good permanent latrines for all the different corps and followers (with the exception of the 7th N. I., for which permanent latrines are being built,) and dry and liquid sewage is deposited in the manure yard (situated in civil limits) in pits dug for the purpose, the deposits being covered with earth.

The Cavalry, Artillery, and 7th N.I. have no conservancy cart of their own. The cart with the Native Infantry Regiment has, therefore, to be utilized in removing the receptacles from the latrines of these corps. There being a large number of followers with these corps, the establishment allowed could not possibly remove the latrine refuse to the manure yard, which is a long distance off. This throws a heavy amount of work on the Infantry cart, almost more than it is able to perform.

The station conservancy cart removes the dry sweepings from the different lines.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

There is no want of cleanliness in the station.

The conservancy of the regimental bazars, private compounds and lines being good.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

There are no European Troops at Rajkot.

The supplies for the European Officers and European and Eurasian communities generally are inferior in quality; the meat is poor and very often diseased.

The quality of the bread varies considerably, but has been better lately; it has also slightly decreased in price, but is still very dear. Vegetables are bad and scarce, no European vegetables being procurable in the bazar; but the station garden (kept up by voluntary contributions) in a measure supplies the deficiency.

The Sudder Bazar is in the civil power and under Native superintendence, and requires reform.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

No change has been made since last year in the sanitary or conservancy arrangements.

A correspondence has taken place relating to the establishment of the trench latrine system, and a field is to be rented from the 1st April next for that purpose, the field being situated near the jail and to the south of the Jooria road.

The trees planted on the road-side are thriving, and it is in contemplation to further extend the planting of trees on other roads.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

None.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II. (c.)—Bad state of Native Artillery Lines.*

The provision of new lines for the Native Artillery is under consideration.

---

## SANITARY REPORT OF SHOLAPUR FOR 1873.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The 28th Regiment N. I. formed the garrison during the greater part of the year, viz., up to the middle of November, and a detachment of the 13th N. I. during the remainder of the year; but no data have been left on record to enable me to furnish the information required above. Having only arrived after the termination of the year, I have no personal knowledge on any of the above points.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The drainage of the station is natural. There is some marshy ground in the vicinity of the Motee Bagh, which, during a considerable portion of the year, is to windward of the cantonment, and which may be a possible source of malaria when in process of drying. It could be easily improved by drainage.

SECTION II. (*b.*)—WATER SUPPLY.

I am not aware, from want of records, whether there was any deficiency in the quantity, or any defect in the quality, of the water during the past year; but I am of opinion that an additional well in or near the Regimental Lines is a desideratum.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The accommodation in barracks is good and sufficient.

The hospital, however, is not large enough for the wants of an entire regiment, and there are no separate wards for cases of contagious disease or ophthalmia, which latter is said to be prevalent in the station.

A dead-house is also required.

SECTION II. (*d.*)—CONSERVANCY.

As far as I am aware, the change to the dry-earth system of conservancy, said in last year's report to be about to be introduced, was not carried out. The latrines are in good order and kept clean, and free from odour. The Native population in the Sudder Bazar are in the habit of soiling the ground on the outskirts of the bazar and within a short distance of the Regimental Hospital; but they are under the control of the Civil authorities.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station generally and the private compounds are clean.

The Sudder Bazar is also clean, with the exception alluded to in the reply to the last question.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

None are supplied.

SECTION II. (*g.*)—OTHER DEFECTS.

I have not been in the station sufficiently long to enable me to speak positively on this point.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

There are no data on record to enable me to give information on this point.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a.*—*g.*) ALREADY GIVEN IN SECTION II.

Having been so short a time in the station, I am not prepared at present to offer any suggestions beyond those already adverted to, viz., the drainage of the marshy ground near the Motee Bagh, the digging of an additional well in or near the Regimental Lines, and the increase of the Hospital accommodation.

REMARKS OF THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

*Section II.* (*a.*)—*Marshy ground in the vicinity of the Motee Bagh.*

*Section IV.—Drainage of the above recommended.*

A special Committee, with the Sanitary Commissioner as President, was convened in 1870 to inquire into the sanitary condition of Sholapur with reference to the marsh near the Motee Bagh, and the drainage of the ground alluded to was one of the recommendations of the Committee; but as doubts were raised touching the soundness of the scheme, and the European Troops having recently been removed from the station, no further action was taken in the matter.

*Section II.* (*b.*)—*An additional well in the Lines required.*

*Section IV.—Recommends the above.*

The insufficiency of water during the hot weather was noticed in last year's report. An estimate for sinking an additional well will be called for.

*Section II.* (*c.*)—*Insufficiency of the Hospital accommodation.*

Plans and estimates for carrying out the necessary improvements to the hospital have been called for, and will be submitted to Government early next financial year.

*Section II.* (*d.*)—*Defilement of the ground on the outskirts of the Bazar.*

The Cantonment Committee have been directed to bring this matter to the notice of the Civil authorities.

*P.S.*—This report has been drawn up by the Medical Officer of the 19th N. I., who only arrived at Sholapur "after the termination of the year," and he does not appear to have been furnished with any information by the Cantonment Committee, whose duty it is to compile the report; consequently it is very incomplete in the requisite particulars, and this fact has been pointed out to the General Officer Commanding Poona Division.

# SANITARY REPORT OF SURAT CANTONMENT FOR 1873.

## Section I.—Health of the Corps forming the Garrison.

1. The average strength of H. M.'s 26th Regiment N. I. during the past year has been 659.

2. The number of admissions from all causes has been 1,214, showing a decrease of 376 on the previous year, when the Regiment suffered severely from dengue fever. The prevailing diseases in camp and vicinity during the past year have been ague, boils, rheumatism, conjunctivitis and bowel-complaints.

3. The daily average number of sick has been 27·3, while in the preceding year it amounted to 40·0.

4. The admissions from bowel-complaints have been 55.

5. Seven fatal cases occurred during the year, viz., two from scurvy, one from asthma complicated with scurvy, and one from each of the following diseases :—pneumonia, paralysis, dysentery, and remittent fever.

6. Three cases of small-pox occurred; one was a sepoy, the other two were followers, one of whom died.

7. Vaccination has been regularly and successfully performed during the year; re-vaccination has also been carefully attended to; all recruits joining the Regiment have been re-vaccinated, but in the majority of instances unsuccessfully.

8. No case of cholera occurred.

9. The general health of the European community in camp has, on the whole, been satisfactory during the year. The health of the Native population has also considerably improved.

## Section II. (*a.*)—Drainage within the Cantonment.

The drainage within the cantonment is good, with the exception of the lines, which are situated on low ground, and consequently during the rains considerable quantities of water occasionally collect. There are no jheels or marshes in the station or its vicinity; but the maidan on the southern and eastern sides of the lines is studded with holes, in which the rain-water lies, and this undoubtedly tends to increase all diseases of a malarious nature.

## Section II. (*b.*)—Water Supply.

Water is obtained from wells in camp in sufficient quantity, but of an inferior quality and brackish. However, good water is obtained at some distance outside camp.

## Section II. (*c.*)—Accommodation for the Troops.

The accommodation for the Troops is sufficient; however, the ventilation of the huts is slightly defective.

The Hospital affords ample accommodation for 35 or 36 patients, exclusive of the verandahs; these are large and roomy, and, if necessary, a number of patients can comfortably be located in them.

## Section II. (*d.*)—Conservancy.

The regimental latrines are in a good sanitary condition. Conservancy is carried out by the tank cart system. The sewage is conveyed some distance from camp, and deposited in holes, which are carefully covered with dry earth.

No part of the cantonment land is manured with the station sewage. During the past year the dry-earth system has been adopted in the hospital latrine. The chief difficulty experienced in the working of this system is owing to the nature of the earth, which becomes very sticky if any water gets mixed with it, and generally adheres to the sides of the pans, so that in most instances it requires to be washed off. However, this can be obviated to a great extent, by mixing the earth with an equal proportion of sand.

## Section II. (*e.*)—Cleanliness.

The general sanitary condition of the camp is good.

## Section II. (*f.*)—Quality of Rations supplied to the Troops.

No rations are supplied; there has been no unusual deviation in the market price of food.

# *GENERAL ORDERS relating to the Sanitary Condition and Comfort for the Troops.*

## (Published during 1873.)

### *G. G. O. No.* 173, *dated 25th February* 1873.

Under Section IX. of Bombay Act III. of 1867, His Excellency the Governor in Council has been pleased to approve of the following being entered as Rule 22-A of Chapter III. of the Cantonment Rules framed under Section XI. of the above named Act :—

" 22-A.—No person shall, within cantonment limits, feed milch cows, buffaloes, goats, or any animal, the flesh of which is used as food for human beings, on any foul or unwholesome food, nor shall any person, within the said limits, sell the flesh or milk of animals so fed."

### *G. G. O. No.* 198, *dated 5th March* 1873.

The following General Order by the Government of India, dated 24th February 1873, No. 196, is republished :—

" No. 196 of 1873.—With reference to G. G. O. No. 830 of the 22nd September 1871, the Right Honorable the Governor General in Council is pleased to authorize the supply of one scoop and one box of dry-earth to each seat in hospital privies at such stations where the dry-earth system of conservancy is carried out.

The scoops and boxes will be provided by the Public Works Department and added to Form 148 ' Public Works ' published with G. G. O. No. 303 of 1872.

Order Books to be corrected accordingly.

No. 200 of 1873.—The following General Order by the Government of India, dated 25th February 1873, No. 199, is republished :—

" No. 199 of 1873.—*Erratum.*—In G. G. O. No. 152, dated 22nd February 1864, laying down a scale of clothing to be issued in alternate years to European Troops serving in India, substitute the following for that previously laid down for Artillery and Cavalry, the erratum as regards Infantry having been already notified in G. G. O. No. 549 of the 17th May 1872 :—

### HORSE ARTILLERY.

*1st Year.*

1 Full Dress Jacket.
1 Pair Overalls, strapped.
1 „ Wellington Boots.
1 „ Ankle Boots.
1 „ Gloves.
1 „ Bootings.

*Compensation.*

1 Pair Biennial Cloth Trowsers payable at the end of the year, or proportionally on a man's discharge during the year, when not issued in kind.

*2nd Year.*

1 Undress Jacket.
1 Pair Cloth Trowsers.
1 „ Wellington Boots.
1 „ Gloves.

*Compensation.*

I.—Difference in value between Dress and Undress Jackets.
II.—Difference in value between Overalls and Cloth Trowsers, when the former are not issued in kind.

### FIELD GARRISON ARTILLERY.

TO MOUNTED NON-COMMISSIONED OFFICERS AND MEN.

*1st Year.*

1 Tunic.
1 Pair Overalls, strapped.
1 „ Wellington Boots.
1 „ Ankle Boots.
1 „ Gloves.
1 „ Bootings.

*Compensation.*

1 Pair Biennial Cloth Trowsers payable at the end of the year, or proportionally on a man's discharge during the year, when not issued in kind.

*2nd Year.*

1 Undress Jacket.
1 Pair Cloth Trowsers.
1 „ Wellington Boots.
1 „ Gloves.

*Compensation.*

I.—Difference in value between Tunic and Undress Jacket.

To Dismounted Non-Commissioned Officers and Men.

| *1st Year.* | *2nd Year.* |
|---|---|
| 1 Tunic. | 1 Undress Jacket. |
| 1 Pair Cloth Trowsers. | 1 Pair Cloth Trowsers. |
| 1 „ Wellington Boots. | 2 „ Ankle Boots |
| *Compensation.* | *Compensation.* |
| 1 Pair Biennial Cloth Trowsers payable at the end of the year, or proportionally on a man's discharge during the year, when not issued in kind. | I.—Difference in value between Tunic and Undress Jacket. |

CAVALRY.

| *1st Year.* | *2nd Year.* |

| 1 Tunic. | 1 Pair Cloth Trowsers. |
| 1 Pair Overalls, strapped. | 1 „ Gloves. |
| 1 „ Wellington Boots. | 1 „ Ankle Boots. |
| 1 „ Ankle Boots. | |
| 1 „ Gloves. | |
| 1 „ Bootings. | |
| *Compensation.* | *Compensation.* |
| 1 Pair Biennial Cloth Trowsers payable at the end of the year, or proportionally on a man's discharge during the year, when not issued in kind. | I.—Tunic.<br>II.—Difference in value between Overalls and Cloth Trowsers, when the former are not issued in kind. |

Order Books to be corrected accordingly.

*G. G. O. No.* 484, *dated* 25*th June* 1873.

Referring to the orders noted in the margin, the following articles of sea out-fit therein laid down should not be supplied for male and female insanes to be embarked in troopships, as they will be supplied on board of those vessels :—

G. G. O. No. 577 of 1869.
„ No. 150 of 1871.

| For Soldiers. | For women. |
|---|---|
| Bed | Bed. |
| Pillow | Blanket. |
| Tin pot | Pillow. |
| „ plate | Tin pot. |
| Iron spoon | „ plate. |
| Bar soap | Bar soap. |
| Negro-head Tobacco. | Iron spoon. |

*G. G. O. No.* 487, *dated* 27*th June* 1873.

Under Section IX. of Bombay Act III. of 1867, His Excellency the Governor in Council is pleased to direct that the following clause, which has been approved by the Government of India, be entered as Rule 22-A of Chapter III. of the Cantonment Rules framed under Section XI. of the above named Act :—

" 22-A.—No person shall, within Cantonment limits, feed milch cows, buffaloes, goats, or any animal, the flesh of which is used as food for human beings, on any foul or unwholesome food, nor shall any person, within the said limits, sell the flesh or milk of animals so fed."

*G. G. O. No.* 524, *dated* 23*rd July* 1873.

With reference to G. O. No. 123, dated 16th February 1869, the following G. O. by the Government of India, dated 8th July 1873, No. 702, is republished :—

" No. 702 of 1873.—With reference to G. G. O. No. 1197 of the 16th December 1868, laying down a scale of ' Infant Diet ' to be added to the hospital diet scales published in G. G. O. No. 23 of the 6th January 1865, it is notified that in future one seer of fuel per diem will be allowed for each infant diet which may be ordered by the Medical Officer."

No. 569 of 1873.—With the approval of the Government of India, His Excellency the Governor in Council is pleased to direct that the following Rule be added to Rule 4, Chapter II., of the Cantonment Rules framed under Clauses 4 to 11 of Section XI. of the Bombay Cantonment Act III. of 1873 :—

"On the receipt, however, of credible information of the occurrence of cholera or other dangerous epidemic disease in a Cantonment, or in a place subject to Cantonment law, it shall be lawful for the Cantonment Magistrate, or Officer Commanding the Station, to authorize, in writing, the inspection, by medical or other officers, of the interior of any house, and of any other premises occupied by any native within Cantonments, or in any place subject to Cantonment law, and within the jurisdiction of such Cantonment Magistrate, or Officer Commanding the station. Where consent of the occupiers is not given, notice in writing not less than 24 hours before such inspection shall, in all cases, be given.".

*G. G. O. No.* 593, *dated* 17*th September* 1873.

In assimilation to the practice in the Bengal Presidency, the allotment of European Troops to tents in this Army will, for the future, be for all arms as follows :—

| | | | | | |
|---|---|---|---|---|---|
| Tents, Soldiers | D. P. | ... | ... | ... | 16 men. |
| „ „ | S. P. | ... | ... | ... | 10 men. |

*G. G. O. No.* 778, *dated* 15*th December* 1873.

The addition of light claret to the scale of stimulants for the use of the sick in European Hospitals to be issued in suitable cases on the Medical Officer's certificate, and when sound wine of this description can be purchased locally by the Commissariat Department at a moderate cost, is sanctioned.

No. 790 of 1873.—The following addition is authorized to be made to the scale of Furniture for Lock Hospitals published in G. G. O. No. 9 of 1869 :—

"Two Bathing Tubs (half casks)."

No. 791 of 1873.—The following General Order by the Government of India, No. 1230, dated 8th December 1873, is republished :—

"No. 1230 of 1873.—The following addendum to G. G. O. No. 1077 of 1871 is published for general information and guidance :—

XI. Soldiers, including time-expired men and invalids and their families, are debarred from drawing the annual bedding issuable on the 1st October, if they are under orders for England, but they will receive the ship bedding instead, under General Order No. 201 of 1866. Those to whom the triennial issues of blankets and cotton suttrunjees were not due on the 1st October, when under orders for embarkation, will be allowed no compensation for such articles, but may receive compensation only for 1 cotton sheet (Rs. 0-13-7) in lieu of this annual issue in kind, according to the proportions specified hereafter, for periods of detention extending to three months and upwards. Only those who were entitled to the triennial issues of the English blanket and cotton suttrunjee when under orders for embarkation will be granted compensation for such articles, and for the cotton sheet annually due, calculated at the annual average rates (specified in the margin for the sake of illustration) which will be fixed annually, and in the following proportions thereof, according to periods of detention beyond 1st October, *viz* :—

| | Rs. | a. | p. |
|---|---|---|---|
| 1 English blanket triennially ..... | 2 | 10 | 4 |
| 1 Cotton suttrunjee triennially ... | 1 | 9 | 3 |
| 1 Cotton sheet annually for three years, at Rs. 0-13-7..... | 2 | 8 | 9 |
| Total for 3 years..... | 6 | 12 | 4 |
| Annual average ..... | 2 | 4 | 1 |

Detentions for less than three months, no compensation.

Detentions for three and less than six months, one-fourth compensation.

Detentions beyond six months, half compensation.

Should the triennial blanket be due to invalids on 1st October when under orders for embarkation, and the state of the men's health and bedding in use require it, a blanket may be issued, but no compensation will be allowed for the sheet or suttrunjee if due.

*G. G. O. No.* 808, *dated* 24*th December* 1873.

Head-rests in the proportion of five to each Native Regimental Hospital are sanctioned, and will be added to the scale of Hospital furniture published in General Order No. 251 of 1873.

No. 811 of 1873.—The scale of clothing laid down in G. G. O. No. 481, 24th June 1873, for the Non-Commissioned Staff of Garrisons, is extended to that of Depôts in the plains; and the following scale is allowed to the Non-Commissioned Staff of Sanitaria :—

*For the 1st Year.*

A Tunic.
A Pair of Cloth Trowsers.
Two Pairs of Boots.
A Wicker Helmet (or compensation in lieu).

*For the 2nd Year.*

A Serge Frock.
A Pair of Cloth Trowsers.
Two Pairs of Boots.
Compensation for difference in value between Tunic and Serge Frock.
Compensation for a pair of Serge Trowsers.

General Orders by the Commander-in-Chief.

*G. O. C. No. 292, dated 7th May 1873.*

Sanitary.—With reference to G. O. C. No. 550, 21st September 1870, regarding the measures to be adopted on the outbreak of cholera, the Commander-in-Chief is pleased to direct that at Stations where there is no Staff Surgeon, or where no Officer draws an allowance for the medical charge of the Division, Brigade, or Station Staff, the Senior Regimental Medical Officer is to perform the duties detailed in para. 3 of the Order in concert with the Cantonment Magistrate.

*No. 377, dated 18th June 1873.*

Clothing.—The Commander-in-Chief desires to notify, for the information of Officers Commanding British Troops, that in accordance with the practice in Bengal, Government has sanctioned the supply to all Soldiers, immediately on landing in the country, of a Wicker Helmet, one Turban, and two Covers, the biennial allowance of Rs. 4 being made for all subsequent issues; but should the next grant to the Army occur within six months of the landing, no further sum will be allowed until the next subsequent grant become due. The same rule will be applicable to Recruits enlisted in India.

Helmets.

Bombay Army Circular No. $\frac{8}{E}$ dated 4th March 1873.

No. 458, dated 30th July 1873. Prisoners.—The following Scale of Diet, for European Soldiers undergoing imprisonment, having been approved by Government, the Commander-in-Chief is pleased to direct that the same be adhered to in this Presidency:—

Scale of Diet.

| Days of the Week. | Breakfast. | Dinner. | Supper. |
|---|---|---|---|
| Sundays ... ... ... | Bread, 8 oz. | Meat, with bone, 1 lb. | Same as breakfast. |
| | Milk, 8 oz. | Barley and onions, 4 oz. | |
| Wednesdays ... ... | Soojee, 2 oz. | Potatoes, 12 oz. | |
| Fridays ... ... ... | Sugar, 1 oz. | The above ingredients to be made into soup. | |
| | Tea, 1 pint. | Meat, with bone, 8 oz. | Same as breakfast. |
| | Milk, 2 oz. | Split peas, 4 oz. | |
| Mondays ... ... ... | Sugar, 1 oz. | The above ingredients to be made into soup. | |
| Saturdays ... ... ... | Bread, 8 oz. | Bread, $\frac{1}{2}$ lb. | |
| Tuesdays ... ... ... | Same as on Sunday ... | Rice, 6 oz. | Same as breakfast. |
| | | Milk, 1 pint. | |
| | | Bread, $\frac{1}{2}$ lb. | |
| Thursdays ... ... ... | Same as on Saturday... | Potatoes, 20 oz. | Same as breakfast. |
| | | Milk, 1 pint. | |
| | | When good potatoes are not procurable, 1 lb. of bread may be substituted. | |

Half an ounce of salt daily to be allowed to each prisoner.

*Note.*—After 30 days' imprisonment, the *dinner* on Mondays to be changed to that prescribed above for Sundays.

*G. O. C. No.* 528, *dated 6th September* 1873.

The following General Orders, by His Excellency the Commander-in-Chief in India, are published for information and guidance :—

*Head Quarters, Simla, 26th August* 1873.

I. No. 264.

Arms.—With the sanction of Government, the Right Honorable the Commander-in-Chief is pleased to announce that the windows, barred, provided in Armourers' Shops of Regiments of Native Infantry, are also to be glazed, in order that dust may be excluded from the shop. The necessary requisitions for this addition are to be made to the Department, Public Works, whenever required.

Armourers' shops.
Military Department Endorsement No. 464, dated 16th July 1873, to Quarter Master General.
Public Works Department Letter No. 1159 B. M., dated 8th July 1873.

2. The following addition is accordingly to be made to para. 318, Native Musketry Regulations, *viz* :—

After " north," in fifth line, add " glazed and."

*G. O. C. No.* 537, *dated 10th September* 1873.

In continuation of G. O. C. No. 458, 30th July last, it is notified that the scale of Prison diet therein laid down is intended for Courts-Martial Prisoners only, and as a tentative measure.

Scale of Diet.

General Officers Commanding Divisions will be good enough to submit to the Adjutant General of the Army, on the 1st November next, reports as to the suitability or otherwise of the new scale.

*G. O. C. No.* 743, *dated 29th November* 1873.

Clothing.—With reference to the Orders noted at margin, Government have sanctioned the following outfit for female Insanes, the wives and daughters of Soldiers, when proceeding to England in H. M.'s Indian troop-ships *viâ* the Suez Canal :—

Insanes.
G. G. O. No. 577 of 1869.
„ No. 150 of 1871.
„ No. 484 of 1873.
Government Resolution No. 4495 of the 11th November 1873.

*Clothing.*

| | |
|---|---|
| Boots, strong ... ... ... ... ... ... | pairs 1 |
| Drawers, cotton ... ... ... ... ... ... | pairs 6 |
| Gowns, Linsey, brown ... ... ... ... ... | 1 |
| „ Alpaca ... ... ... ... ... ... | 1 |
| „ Night, cotton ... ... ... ... ... | 4 |
| Hat ... ... ... ... ... ... ... ... | 1 |
| Petticoats, flannel, white ... ... ... ... ... | 2 |
| Shawl ... ... ... ... ... ... ... | 1 |
| Shifts ... ... ... ... ... ... ... | 6 |
| Stockings, woollen, black ... ... ... ... .. | 4 |
| Stockings, cotton ... ... ... ... ... ... | 4 |
| Handkerchiefs ... ... ... ... ... ... | 6 |

*Necessaries.*

| | |
|---|---|
| Brush ... ... ... ... ... ... ... | 1 |
| Comb ... .. ... ... ... ... ... | 1 |
| Chest, with lock and key ... ... ... ... ... | 1 |
| Towels ... ... ... ... ... ... ... | 4 |

Indents and measurement rolls for the outfit of Insanes (male and female) will be prepared immediately on receipt of the decision of the Invaliding Boards on their cases, and forwarded to the Brigadier General Commanding Bombay District for transmission to the Executive Commissariat Officer at the Presidency.
